About Me

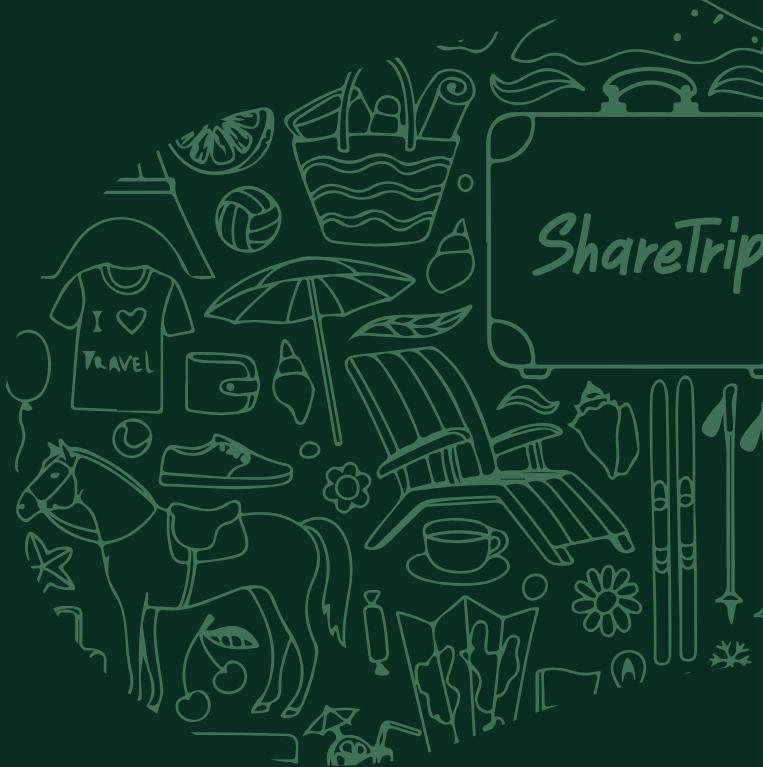

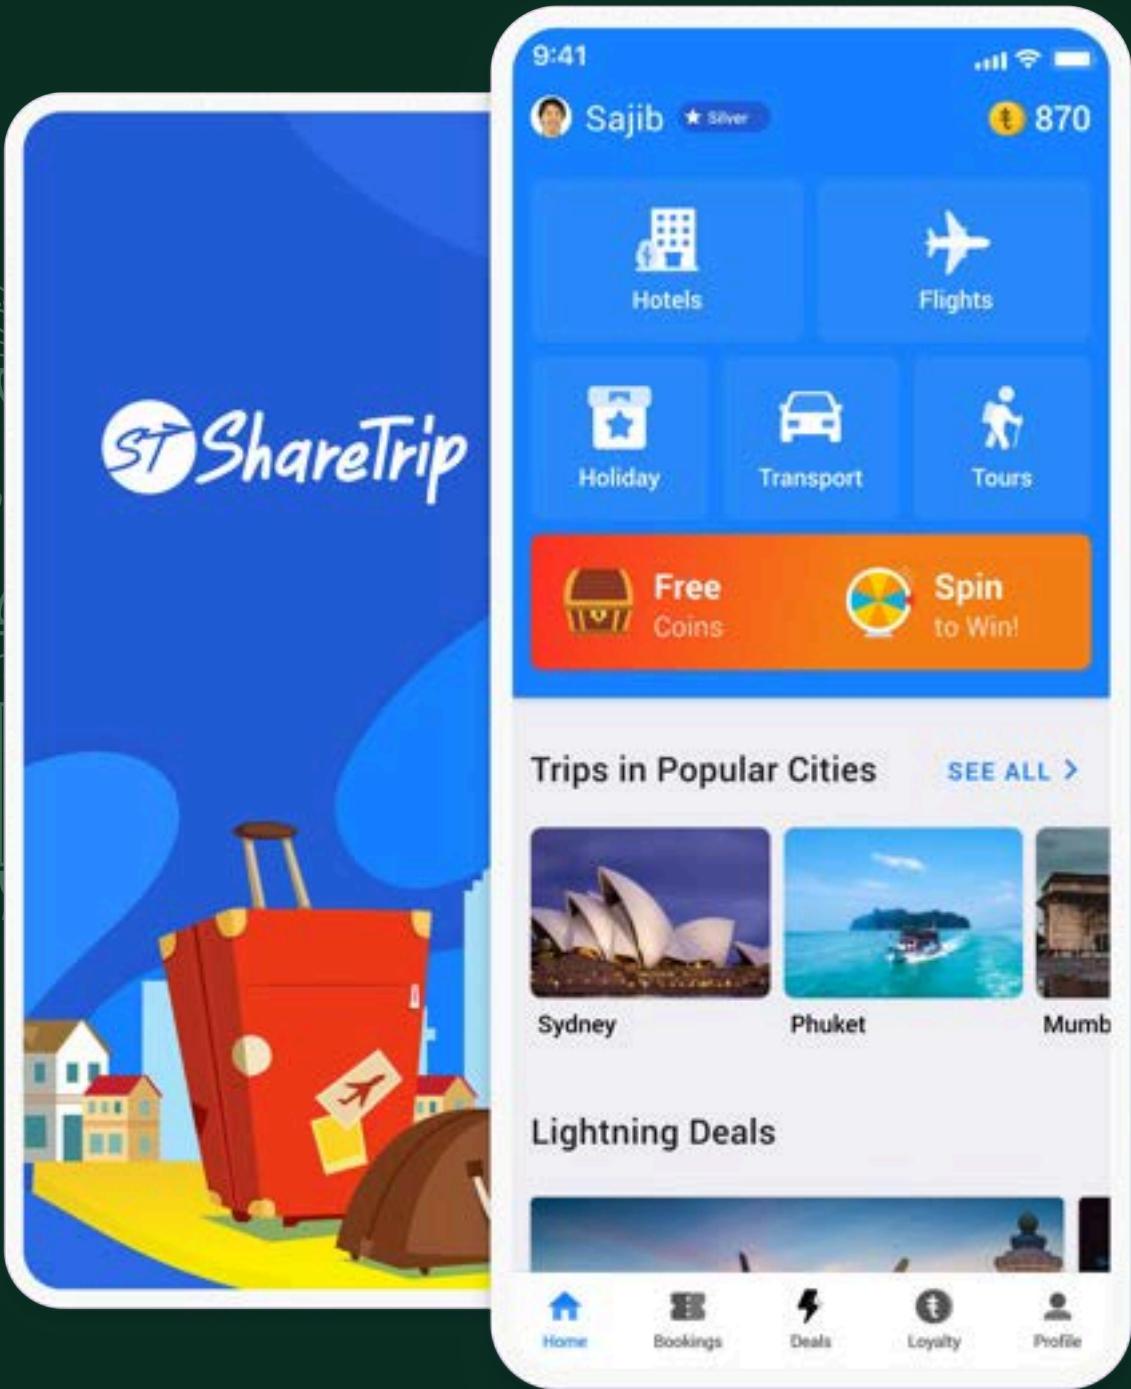

# Profile

I'm a Product Designer with more than 8 years of working experience building bridges between business, technology, and human.

- I've helped startups and product-driven companies to build **8 mobile apps, 15 web applications**, and 35 websites.
- I believe in design practice that is data-informed and driven by empathy.
- I'm passionate about balancing complex business requirements, and user needs through a user-centered design process.

Sample of the products and companies I have worked with:

# Designing Travel App Experience from Scratch

Project

**ShareTrip Mobile Application**

Timeline

**October 2018 - March 2019**

My Role

**UX Research, UI/UX Design**

Tools

**Miro, Adobe XD, Zeplin, Figma, Notion.**

Platform

**iOS and Android.**

Team Collaboration

**Product, Marketing, Sales, Customer Support, and Tech.**

## Background

ShareTrip is the pioneer online travel aggregator (OTA) in Bangladesh. Initially, it was providing offline flights, hotels, and holiday package booking services.

## Design Challenge

Our challenge was to design Android and iOS mobile applications from scratch, ensuring functionality, simplicity, intuitiveness, easy-to-use, conversion-friendly, and frictionless booking experience.

## Outcome

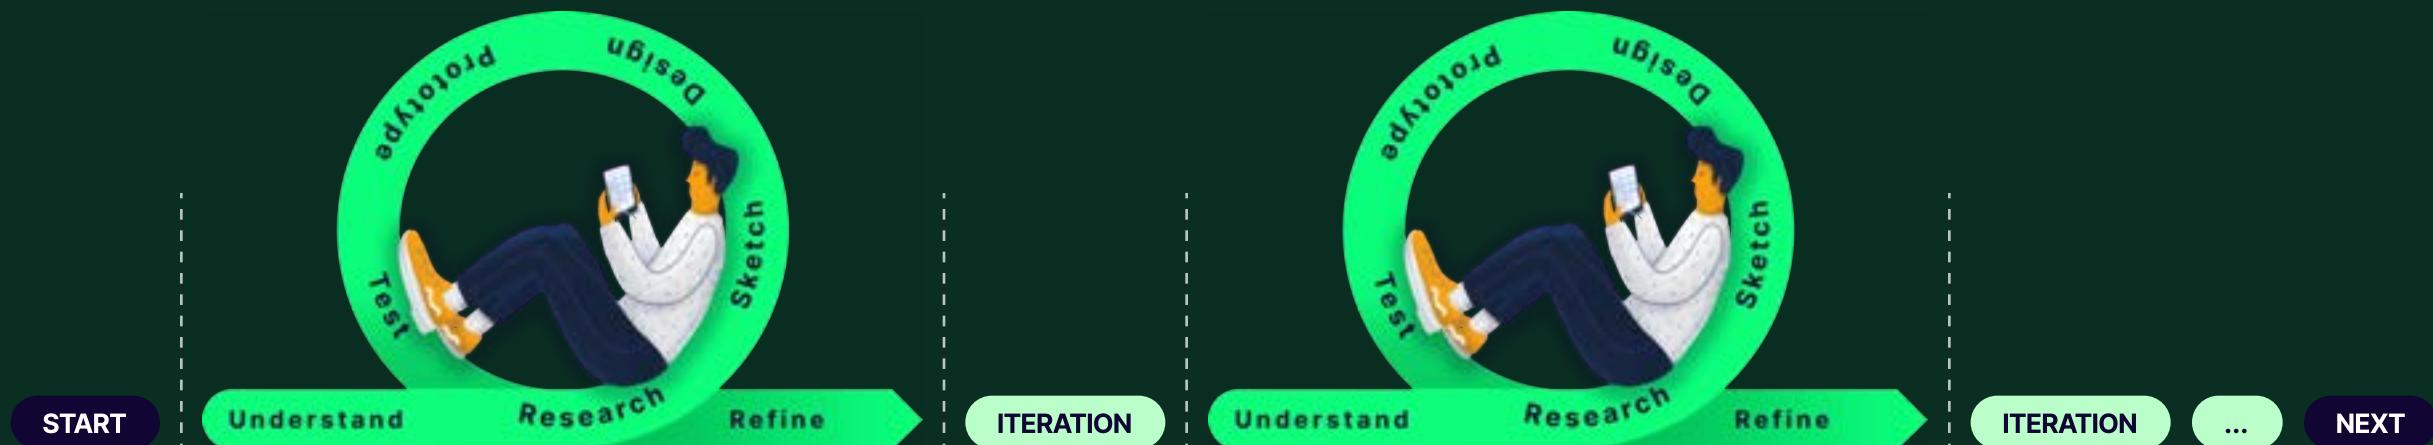

- The success rate was 76% in the booking experience.
- 55% of the users revisit.
- Our online booking was increased by 25%.

# Process

## Design Thinking & Lean UX Design

I help the team to choose a mixed approach of Design Thinking and the Lean UX design process.

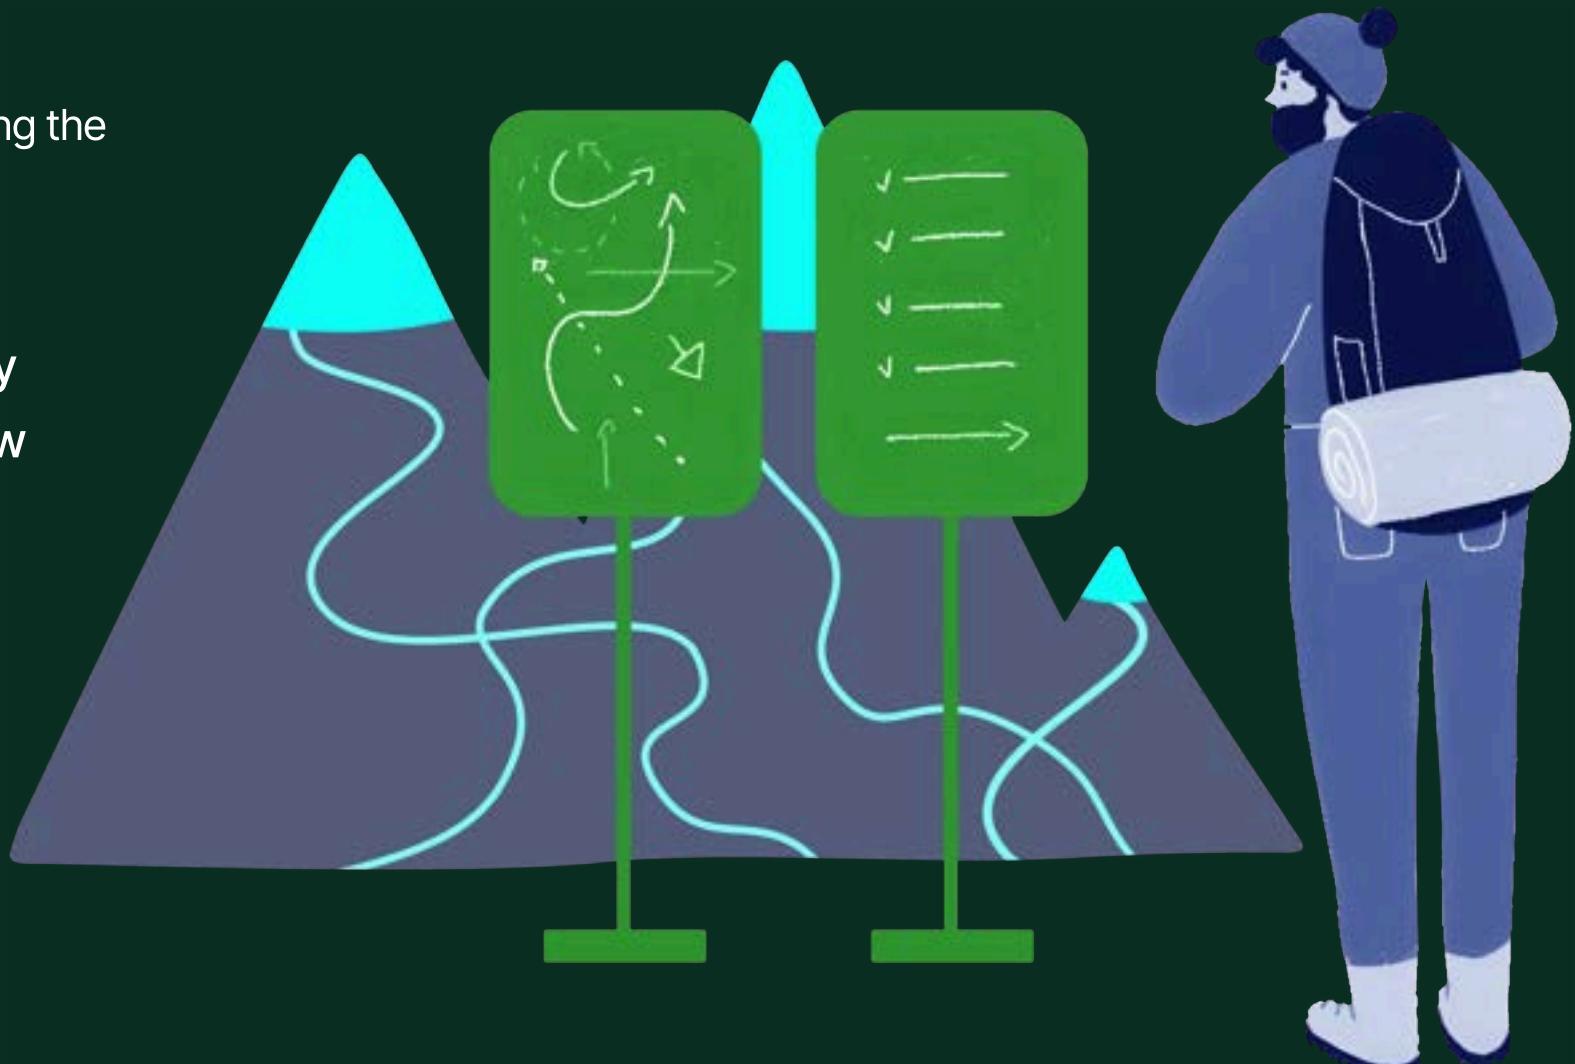

# Understand

## I have no ideas about the travel industry!

So I started seeking answers to my questions, understanding the end goal from users and business perspectives

- What does the product do?
- Who is the audience? Where they live, what they think, like & do? Where / When / How / Why /How often do they use it?
- What are the business goals?
- Do the business goals support the user goals?

## Findings

I asked questions to 30 people of different ages, occupations, categories.

Out of which 48.5% were males, and 51.5% were females.

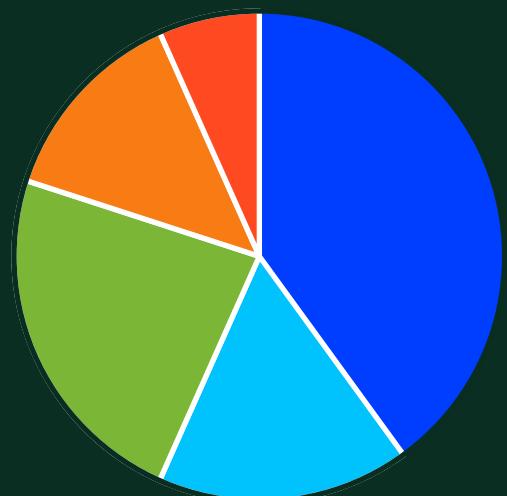

They are mainly from **20-55 years of age**. Collaboratively I worked with our product, engineering, marketing, sales, and customer support teams.

The insights from the answers of those questions were interesting.

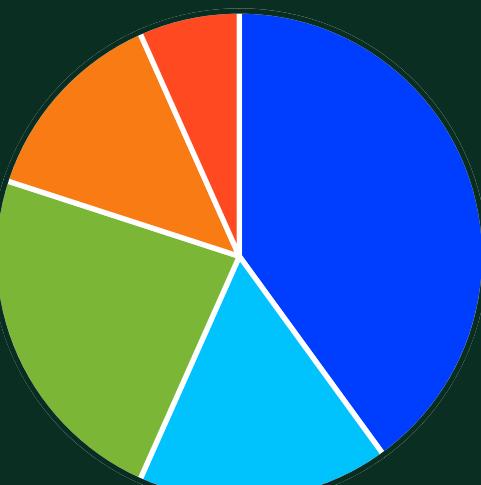

# Findings

**How often do you travel**

- 1 time a year
- 2-3 times a year
- 4-5 times a year
- 5-6 times a year
- 6+ times a year

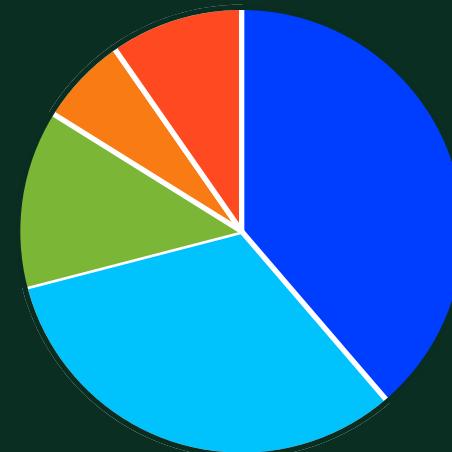

**Age Groups**

- 20-29 (40%)
- 30-39 (16.7%)
- 40-45 (23.3%)
- 46-59 (13.3%)
- 50-55 (6.7%)

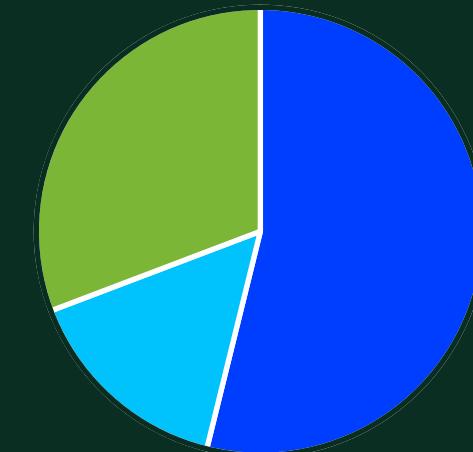

Participants varied in age which played a factor in some of the research results from the answers given

**Main motivation for travelling**

**Age Group: 20-45**

- Discovering New Places (38.7%)
- Business Trips (32.33%)
- To Get Away (12.9%)
- Rest & Relaxation (6.5%)
- Others (9.7%)

**Age Group: 46-55**

- Rest & Relaxation (30.8%)
- Discovering New Places (15.4%)
- Others (9.7%)

# Findings

Do you think you would enjoy the experience of having a travel expert plan an entire trip for you? Why or why not?

**Participant #5 | Age 32 | Male**

*Unlikely, I wouldn't mind receiving a plan from an expert. I would appreciate time to explore more on my own.*

**Participant #5 | Age 25 | Female**

*No, we like the freedom of planning our own travels and don't enjoy the constraints of a trip planned by someone else. It usually doesn't allow any spontaneity during the trip.*

**Participant #9 | Age 45 | Male**

*Yes, because they would have a lot more experience than me. It would save me a lot of time.*

# Mehedee Hasan

Age: 28 Years

Profession: Software Engineer

Family: Wife

Travel in last year: 2 times

## Bio

He is not a very frequent traveler, but he looks for relaxing trips with family. He prefers to choose cheapest flights as well as the nearest hotel from the destinations. Also, make a comparison between offers he gets.

## How often do you book flight and hotel?

1-2 times in a year

## What do to look for while planning a trip?

- Recommendations for lowest fares (85%)
- Save money (75%)
- Comfort (70%)
- Clarity in information (100%)

## Goal

- Find cheapest flight in less time
- Recommendation about hotel and places
- Easy to communicate

## Frustration

- Got stuck while adding personal info
- No clear communication on meal, extra luggage, seat selection, etc.

## Doing

- Asks his friends for recommendations.
- Reads reviews from other travelers.

## Seeing

- Look at his favorite blogger's Instagram page for inspiration.
- His Hopper app alerts him that now is a good time to buy airline tickets.

## Thoughts & Feeling

- How many vacation days do I have saved up? How much will a trip cost me?
- Do travel agents still exist?

## Pains

- It's hard to coordinate my schedule and it takes me too long to plan a trip.

## Gains

- I feel so refreshed and energized after vacation. I'd like to collaborate with someone to plan a trip. There are so many travel resources online that are helpful.

## Competitors Analysis

I analyzed Make My Trip, Kayak, Agoda, Expedia, Booking.com, Rate Hawk, Hopper, Goibio, Airbnb, Skyscanner, and others popular online travel apps.

I explored their booking journey flow through platforms and visited Google Playstore, Appstore, and social media pages to know about their users.

Ratings and reviews

A Google user · November 5, 2014

Excellent and easy to-use app. However, it appears like sometimes it artificially creates a scarcity of availability to push you into closing the booking in a hurry. Which has often lead to making wrong choices or not giving enough time to understand more about the property. It would be good if it categorised bed & breakfast, lodges, hotels and resorts separately.

Horrific. The MMT black plan is just horrific. It adds points to your wallet which you can't use at all. The bonus cash however big the number shows up has a huge restriction and has an immediate expiry. The app assumes you will fly every day and will clean up the points if no booking is done frequently.

Really sorry about the experience and we certainly do not want our users to face the inconvenience. Would request you to share the details on service@makemytrip.com along with the booking id to check the details and resolve.

A Google user · November 13, 2014

For few months I have not been able to book through mmt. Also mmt's black subscription could not be made. Mmt does not accept any of my cards and requires me to try to send bank transfer or call toll free numbers. It's very time consuming and at the end frustrating. I am a frequent traveller.

Really sorry about the experience and we certainly do not want our users to face the inconvenience. Would request you to share the details on service@makemytrip.com along with the booking id to check the details and resolve.

A Google user · December 12, 2014

Most useless app ever. Makes you transfer to website to search flights. Website and in-app price vary widely. They don't have customer support. I literally waited half an hour and still didn't get a response. Worst customer service response. They are not even worth one star. They just want money all cancellation charge and rescheduling charge is not different.

A Google user · September 10, 2014

Good app, but there seriously needs to be a limit on how many notifications the app sends. The rate at which the app sends notifications can only be described as viral. The developer should provide an option for the user to select what kind of notifications he wants to see, and how often.

**Agoda**  
Ratings and reviews

A Google user · June 25, 2014

Lousy experience. Went to book a 2 night's stay at one hotel, when I got to the property, they said my booking was not registered on their system. Additionally, they claimed that agoda has not been paying the clients payment since 2010. Please contact me if this is not the case, and process your bookings precisely as you app says. This is so frustrating!

Hi RB Joseph Flores, We apologize for the unpleasant experience. If there is something more we can help you with, please email us along with your reservation number (if any), guest name, e-mail used to make the booking, phone number, your request, and send to googlesupport@agoda.com. We'll look into it. Regards, Jai

Chris L. · April 11, 2014

So, it's a hotel booking app, but you cannot cancel a reservation using the app. I have 2 phones, Android AND iOS, and cannot cancel a reservation in either app. You have to call!! Been on hold 10 minutes as far... its almost 2019, and this is just about the most basic thing to do... But Agoda can't! And now you have to sign in to resolve. No Agoda, Time for you to be deleted.

We are sorry to hear the unpleasant experience. Please email your Agoda booking ID, request and your phone number to appsupport@agoda.com. We'll get back to you soon.

A Google user · December 12, 2014

I made a booking one day before check-in but my trip was delayed so I had to request the change in check-in date. I contacted the hotel staff and they instructed me to contact Agoda to make the amendment. I was told that without confirmation from Agoda, they couldn't make this change. I called Agoda hotline at 8pm but nobody attended to me for half an hour. Called again at 8pm and waited for 40 mins and still got no answer. In the end, I failed to change the date and my money was forfeited. Bad service!

A Google user · October 13, 2014

I booked a few times using this app and it was ok the rooms always look incomplete. I can't cancel a booking on the app alone even though it was booked just a few days ago. I need to contact customer service on the hotel. I didn't particularly like talking to Singapore customer service. They were not very helpful. I think they are not approachable. The most irritating experience in agoda is they give gift cards after each booking but it expires in only a month as if you expect us to have the luxury of taking vacation every month. It would be better if it has 1 yr validity so people can actually claim it but maybe your goal with that is so that nobody claims it.

A Google user · November 21, 2014

Don't know if this is a bug or a feature. I am not sure whether or not you have to pre-pay for the hotel or get charged while you are getting there. Now I am being overcharged for a hotel room that I don't even want anymore. Just call the hotel next time. It's easier and costs less. Too much to look at on the app. If people want to learn about the amenities, make a different tab for that. Instead of throwing a bunch of useless stuff in their tabs I created a nice hotel room, with a pool. Then if you don't like it, just hit that price but you'll get charged a security deposit. Then the hotel pool was closed, not their fault but still I would have been highly disappointed. Now I am stuck with a hotel room that I do not want. I do want to book through these guys but it is somewhere else. I will never ever do this again.

**Booking.com: Hotels and more**  
Ratings and reviews

A Google user · November 23, 2014

App would get 3 stars but the booking "assistant" is just terrible. Instead of directly messaging the hosts you have to write to this stupid, inefficient assistant that forwards your message. Sometimes it doesn't work. Sometimes you wait 5 minutes until it does. Sometimes it never stops loading. Very annoying experience. I just want to write and get a quick, simple response and don't want to check the app every 10 mins until the message get forwarded. X2Q processing must go faster.

A Google user · December 08, 2014

I installed this while looking for good deals on hotel booking online and I must say this does a very good job. The interface is slightly cluttered but doesn't break the experience. I like the way that results are shown and the filters work great. You also get to see reviews and deals in greater detail. In all, a great app to have if you're a frequent traveler.

A Google user · December 21, 2014

Sorting doesn't work. When trying to sort search results, I always get sent back to the home/start screen of the app once I click the sort button. Hence, I can't do custom sorting in the app and often end up using the mobile website instead. Other than that, the app is great!

A Google user · December 01, 2014

This app is a time saver! We travel frequently and this app is a big help for us. I am given options that I would have spent hours comparing. Its easy, convenient and concise in the hotel descriptions. Everything you need to plan a trip is in this website. I wouldn't know or want to do without it!

10 people found this review helpful

A Google user · December 17, 2014

Cannot find a way to exclude dorm rooms anymore. Even if you exclude hotels in the filter a lot of dorm rooms are classified as hotels so results are still saturated with dorms raising the price on the front screen is not representative of room cost. Makes using the app very difficult and as a result I have resorted to using an app that allows me to search and filter rooms, not beds. Shame as booking was always my go to app and site.

**Expedia: Hotels, Flights & Car**  
Ratings and reviews

A Google user · September 14, 2014

3 very irritating parts of the user experience: 1) every update, which seems to happen more than weekly, auto logs you in. It seems like every time I open this app I need to log back into it even though I haven't explicitly logged out. 2) there's no thumbnail view for a hotel's image gallery - if you can't see them all at once in a grid format and decide to view in more detail to quickly see if a hotel is suitable. This means, for some hotels, you have to swipe through 40+ separate individual photos of the same room decor before you get to see if the outside of the building looks like it's in a dump.

61 people found this review helpful

Did you find this helpful? Yes No

A Google user · December 10, 2014

Expedia wants you to love the app but they do not give you the same options and capabilities as the full web site. For example, you cannot book more than one hotel room at a time. I was also unable to view previous reservations and trips once they had passed. I enjoyed having the app overall, but am considering deleting it if I keep having to use the website anyway. I don't need it taking up room on my phone if it doesn't make booking trips more convenient than the web site.

I was browsing rooms and went back and forth to a specific hotel that was \$82 a night. The price changed to \$149 for a split second as I tried to book it immediately. I was rushing so I didn't do the math before confirming my total. Ended up booking for full price. I cancelled my booking, so now I'll have to wait for the refund to credit back to my account. I spoke with a rep and she offered to help me confirm the price for my next booking. ☺ What a nice rep!

14 people found this review helpful

Did you find this helpful? Yes No

A Google user · October 19, 2014

I am typically a loyal Expedia user, so I hate to give only 3 stars, however there is a problem with the "pay-at-pickup" car rental idea. If you book through Expedia this way, the car rental company has no obligation to hold a car for you. So, basically walking up to the counter with a "pay-at-pickup" reservation is like walking up with no reservation at all. They may not have the car you reserved or they may not have a car at all. While this isn't really Expedia's fault, I feel it's misleading for Expedia to offer this type of car rental if the car companies aren't actually going to honor it. Please remove it from the app or improve its reliability.

The difference between the prices for flights vary greatly between the app and Expedia Internet site. I was trying to book return flights from Paris to Los Angeles for 4 people and the difference in price ended up as 1200 euros difference. Also tried to book a car for the same trip and it was very expensive. I wouldn't even give this app 1 star.

## Hypothesis

To make the service more engaging to the users we build a Gamified Travel App system. We also introduced TripCoin, a virtual currency.

- We had used game elements and **Point Badge Leaderboard (PBL)** system.
- We came up with a wheel game, **Spin to Win** and **Treasure Chest**.

# Product Feature Roadmap

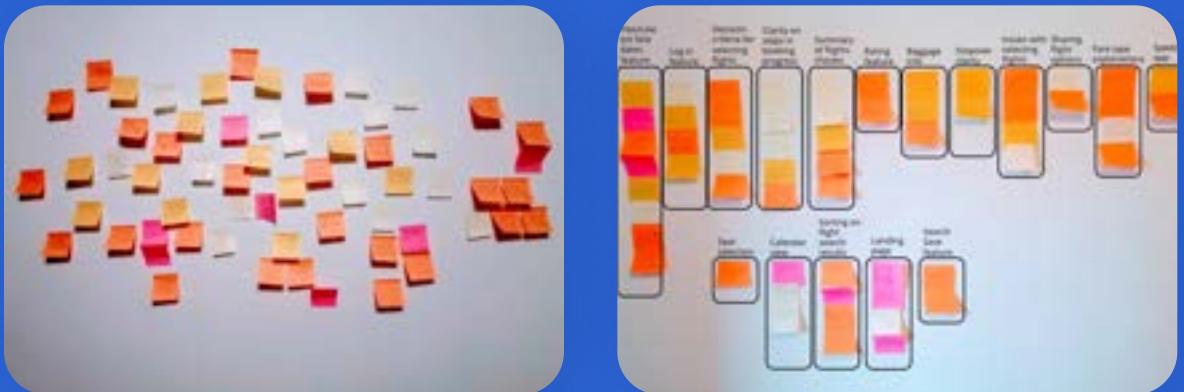

I put together a product feature roadmap of the features needed and a priority list based on our goals and objectives.

## Must Have:

- Users should be able to do flight bookings.
- Users should be able to do hotel bookings.
- Users should be able to manage flight & hotel bookings.
- Users should be able to manage their profile.
- Users should be able to play games & earn TripCoins.
- Users should be able to redeem TripCoins as discount.
- Users should be able to make payments easily.

## Nice to Have:

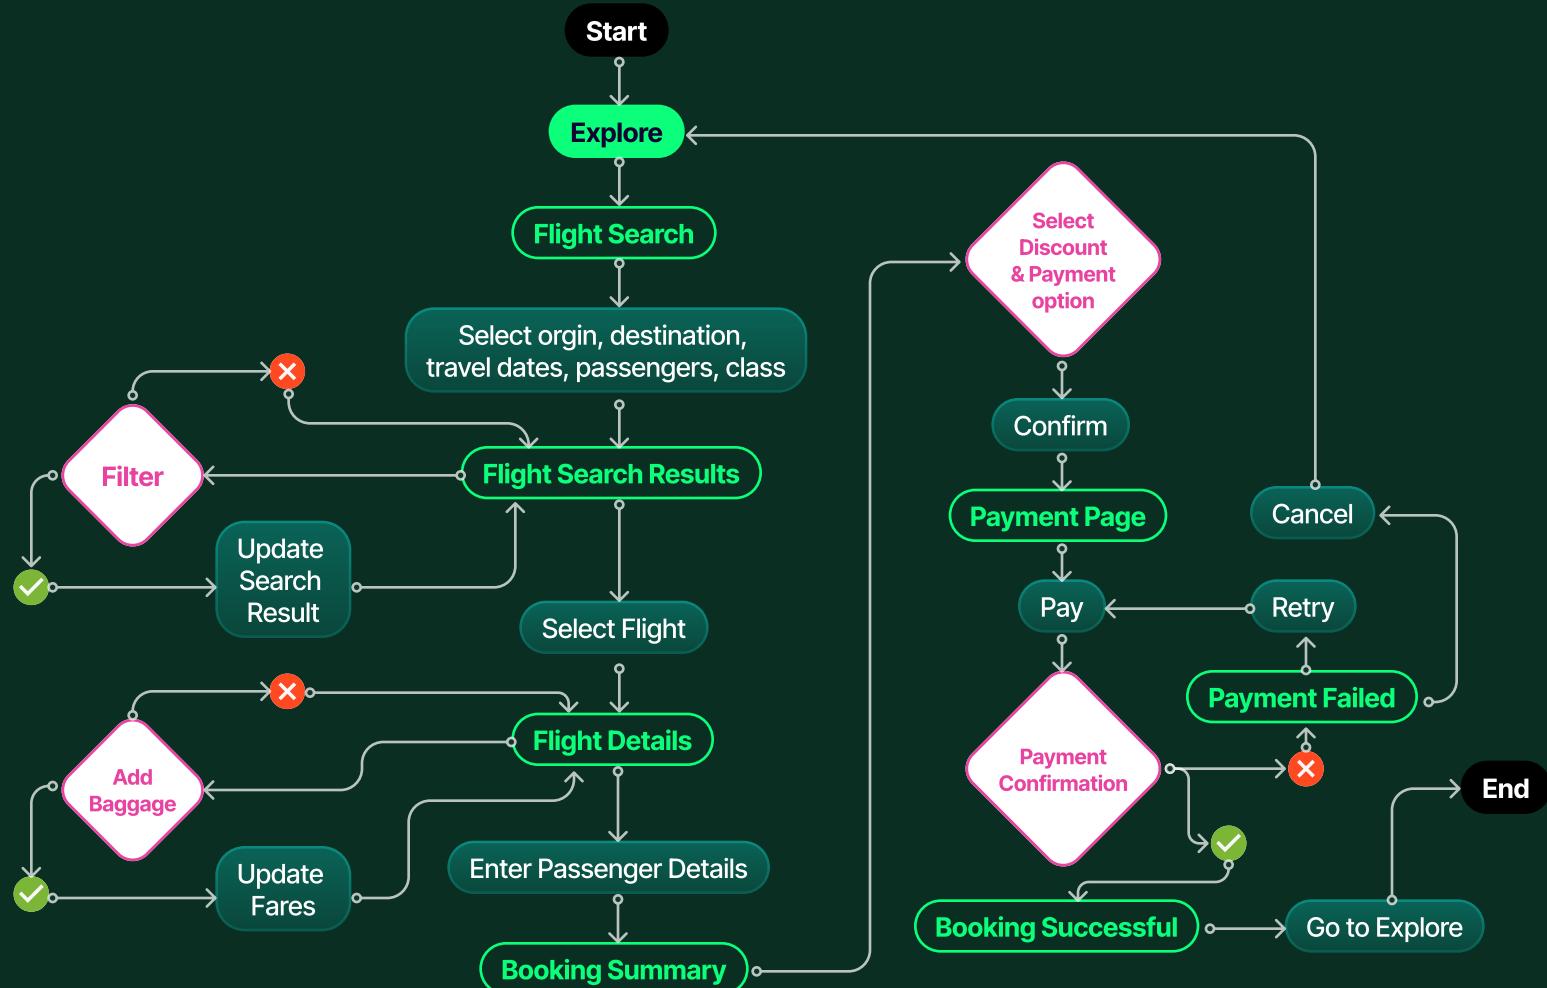

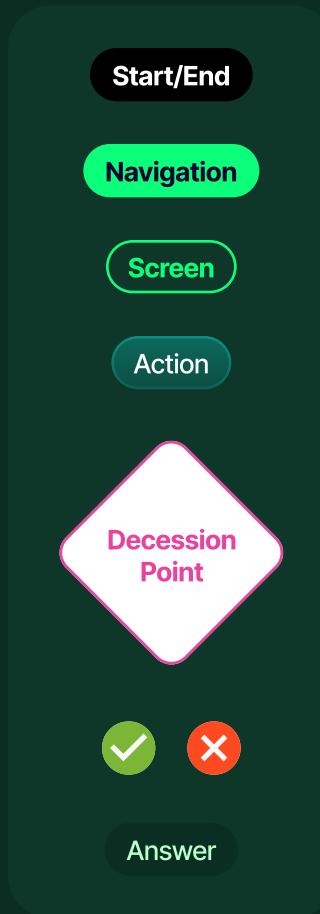

- Live Chat with customer care.
  - Available seats, add extra baggage, seat selection, meal selection during flight bookings.
  - Special request, room request during hotel bookings.
  - Payment form after the booking is accepted.
- ... and more.

# User Flow Map

# Hotel Booking User Flow

UX Design | Ideate

# Sketches

# Wireframing & Prototyping

**We created digital wireframes and built a low-fidelity prototype. Also, we conducted a series of sessions for usability testing.**

It helps us to get more valuable, valid, and actionable user inputs for the app to keep the process smooth.

UX Design | Test & Validated

## Testing

**We invited some focus group users for usability testing sessions.**

We set a list of task assigned for our participants & collect their feedback during those testing sessions.

UI Design

# Design System

Initially, we built basic style guidelines. Afterward, we built a highly customizable design system to create a design language through all the platforms and make design more productive way.

The image displays a 4x4 grid of logo and color options for the brand 'Sharetrip'. The top row shows the 'Sharetrip' logo with various icons (airplane, car, etc.) integrated into the lettering. The middle row shows the word 'Sharetrip' in a sans-serif font with different background colors (blue, orange, purple). The bottom row shows the word 'ST ROOMS' in a bold, sans-serif font with different background colors (black, grey, red). The rightmost column of each row contains a small version of the 'Sharetrip' logo.

The screenshot displays several sections of the Material Design Guidelines. At the top, there's a section titled 'App Bars – Top' featuring a grid of cards with icons and text. Below it is 'Bottom Navigation' with a large blue bar containing navigation icons. The 'Button' section shows a primary button in blue and a secondary button in grey. The 'Dropdown' section shows a dropdown menu with items like 'New item', 'Edit', and 'Delete'. The 'Menu' section shows a bottom sheet with a list of items. Finally, the 'Input Field' section shows two examples of input fields with placeholder text and error messages.

Card 4  
Card 5

UI Design

# User Interface Design

UX Design | Test & Validated

# User Testing

We conducted three smaller in-person user testing sessions.

The goal was to assess the overall usability of the app and identify areas for improvements that could facilitate the completion of the tasks.

## Refine & Deploy

We refined the design and created deliverables for development hand-off.

- Prepared design documentations
- write user stories
- Shared the UI screens to Zeplin
- Maintained a close communication with the team
- Unit testing sessions with the demos

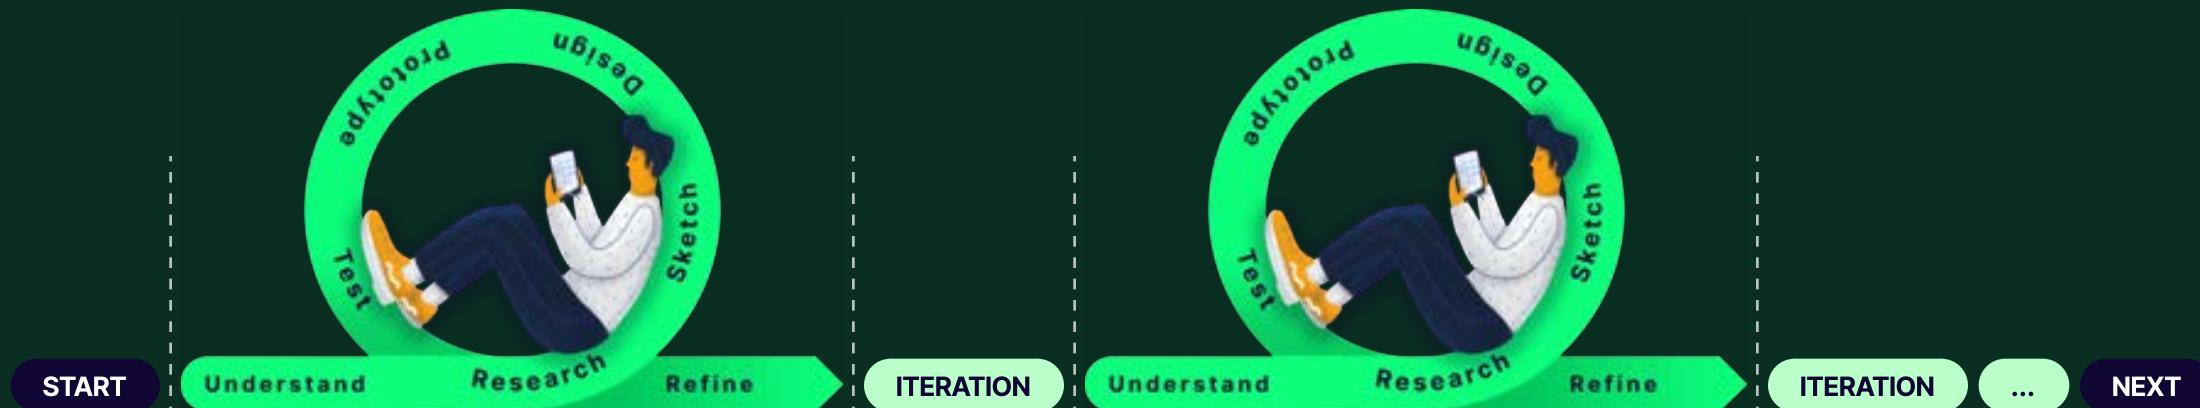

Results & Future vision

## Validation & Future Iteration

We've monitored and measured the results for the first 6 months.

- The booking experience was seamless and intuitive & the **success rate was 76%**.
- The gamification helps us to get more of our users revisit. It was **55% of the user**.
- Our online booking was increased by 25%.

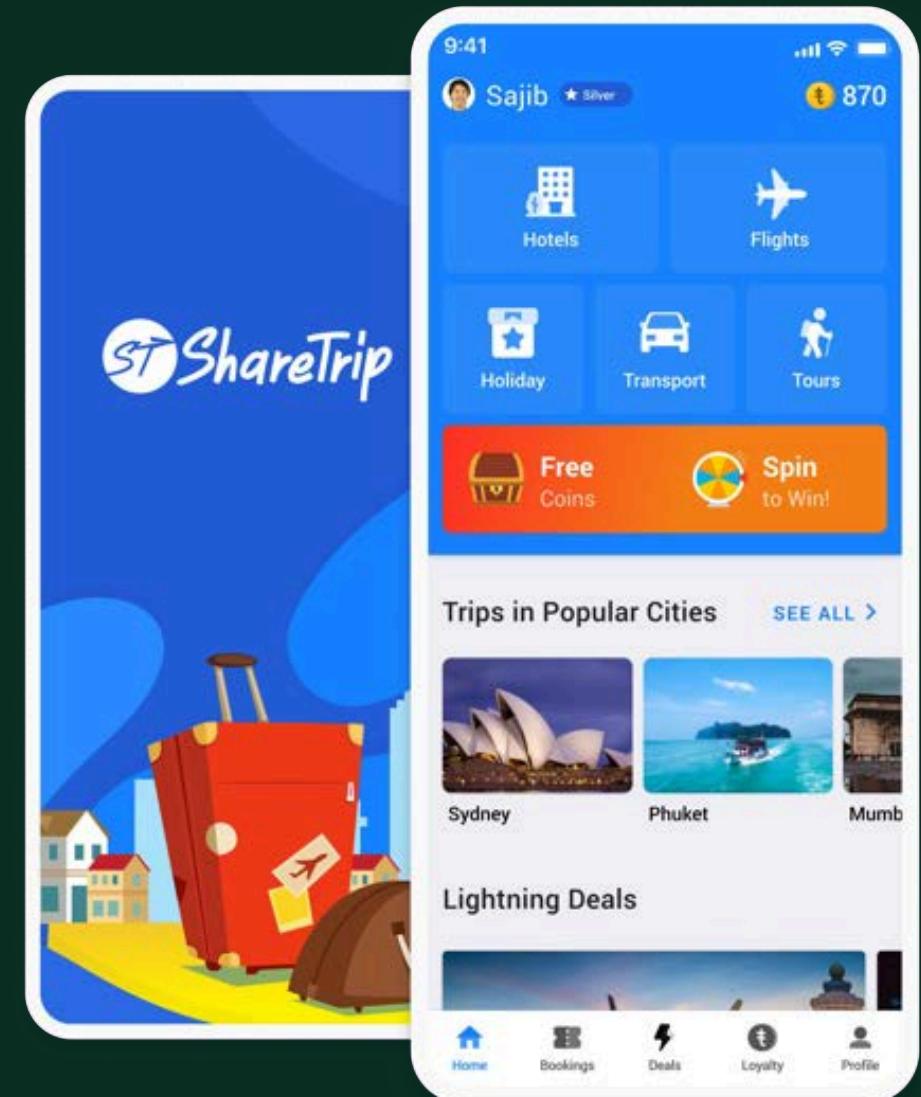

Takeaways

## What I have learned

I've experienced how to design a product and its life cycle and creating a well-functioning app from scratch.

- I've mastered digging into people's consumer minds.
- I learned quickly that inviting the right participants is crucial for getting valuable results from the usability testing sessions.
- I also discovered the mistakes and fixed them.

# Jobike

Redefining  
Jo-Credit Recharge

# Redefining Jo-Credit Recharge

Project

**Jobike User App & JoPoint App**

Timeline

**Jan 2019 - Jun 2019**

Platform

**Android.**

Tools

**Miro, Adobe XD, Figma,  
Notion.**

My Role

**UX Research, UI/UX Design.**

Team Collaboration

**Product, Marketing,  
Support, and Tech.**

## Background

Jobike is an app-based station less bicycle-sharing services, provides an eco-friendly solution for mobility and healthy lifestyles. The users can enjoy their ride by using Jo-Credit Balance and get recharge from only the nearest JoPoints.

## Goal

- Make more efficient Online recharge process.
- Secure the users' privacy.

## Outcome

- Online recharge increased by 65%.
- We secured the users' privacy.

## Design Challenge

The existing Jo-Credit recharge process was manual. Also, the Jobike users needed to visit JoPoints physically to get their recharge. It was very unusual and a hassle for them.

Our main challenge was implementing the **Online Recharge process** for our users to get their **Jo-Credit Balance recharge** from home. Besides, the existing recharge process was creating some crucial problems.

- JoPoints Agent uses a USSD service to recharge.
- The current process exposes users' phone numbers and makes their privacy vulnerable.
- Some users complained that they were receiving spam calls from unknown sources. It seems like their phone numbers are exposed from JoPoints.

# The UX Process

When we have minimal time and resources, selecting an efficient, sustainable, and flexible design process is always challenging. I have chosen the approach to the Lean UX process. It is an iterative process with three simple steps.

- Think
- Make
- Check

and keep repeating the steps.

Focusing on the goals, I also pay attention to the 4 principles.

- 1. A collaborative culture with Lean UX:** We opted for a lean approach emphasizing rapid sketching, prototyping, user feedback, and design mockups.
- 2. Building trust through transparency:** Sharing our methods and thinking from the outset helped to build a strong client relationship.
- 3. Starting on the same page:** Together, we identified risks and aligned on expectations, and constructed a shared vision for the app.
- 4. Build early test early:** This helped us to define the problems in the early stage and solve them instantly.

# The Discovery

The discovery phase was a quick, high-intensity effort that allowed us to -

- Define project goals and milestones
- Audit the existing process faults
- Review the existing solutions by other products
- Understand business visions
- Empathize the users' needs, behaviors, and pain-points
- Understand technological feasibility and constraints.

Here are three considerations that help me to understand and prioritize the issues.

- How satisfying is the solution for users?
- How well is this solution for users' problem solving and also good for business?
- How challenging would it be to build from the technical feasibilities and limitations?

## The Findings

We visited 3 JoPoints and discussed with the agents. We had discussed with the 20 Jobike users.

- 16 Jobike users want the online recharge system. It is a hassle to visit JoPoints.
- 14 users doubt the JoPoints are exposing their phone number, and it causes getting more spam calls.
- All the JoPoints agents are unhappy with the USSD recharge system.
- The JoPoint agents had complained about their account top-up and managing system. It is hard to keep records of all the transactions.

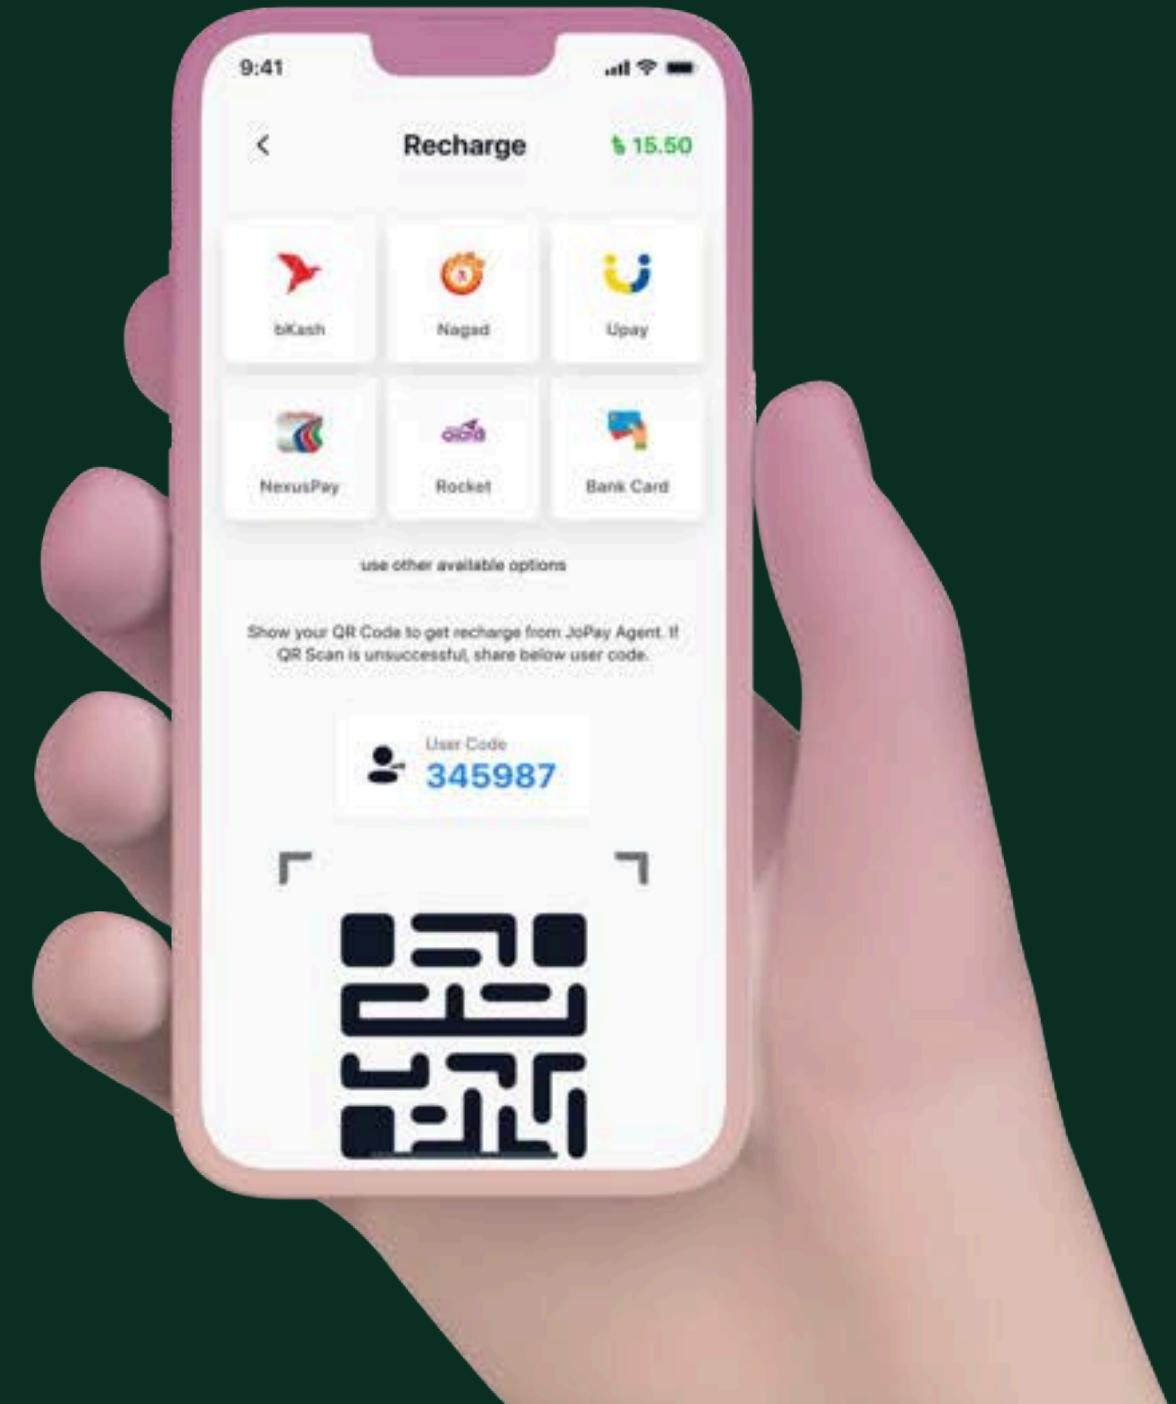

# The Solutions

Thinking about the future, we wanted to create a system that is simple, easy to use, functional and scalable solution to address the problems.

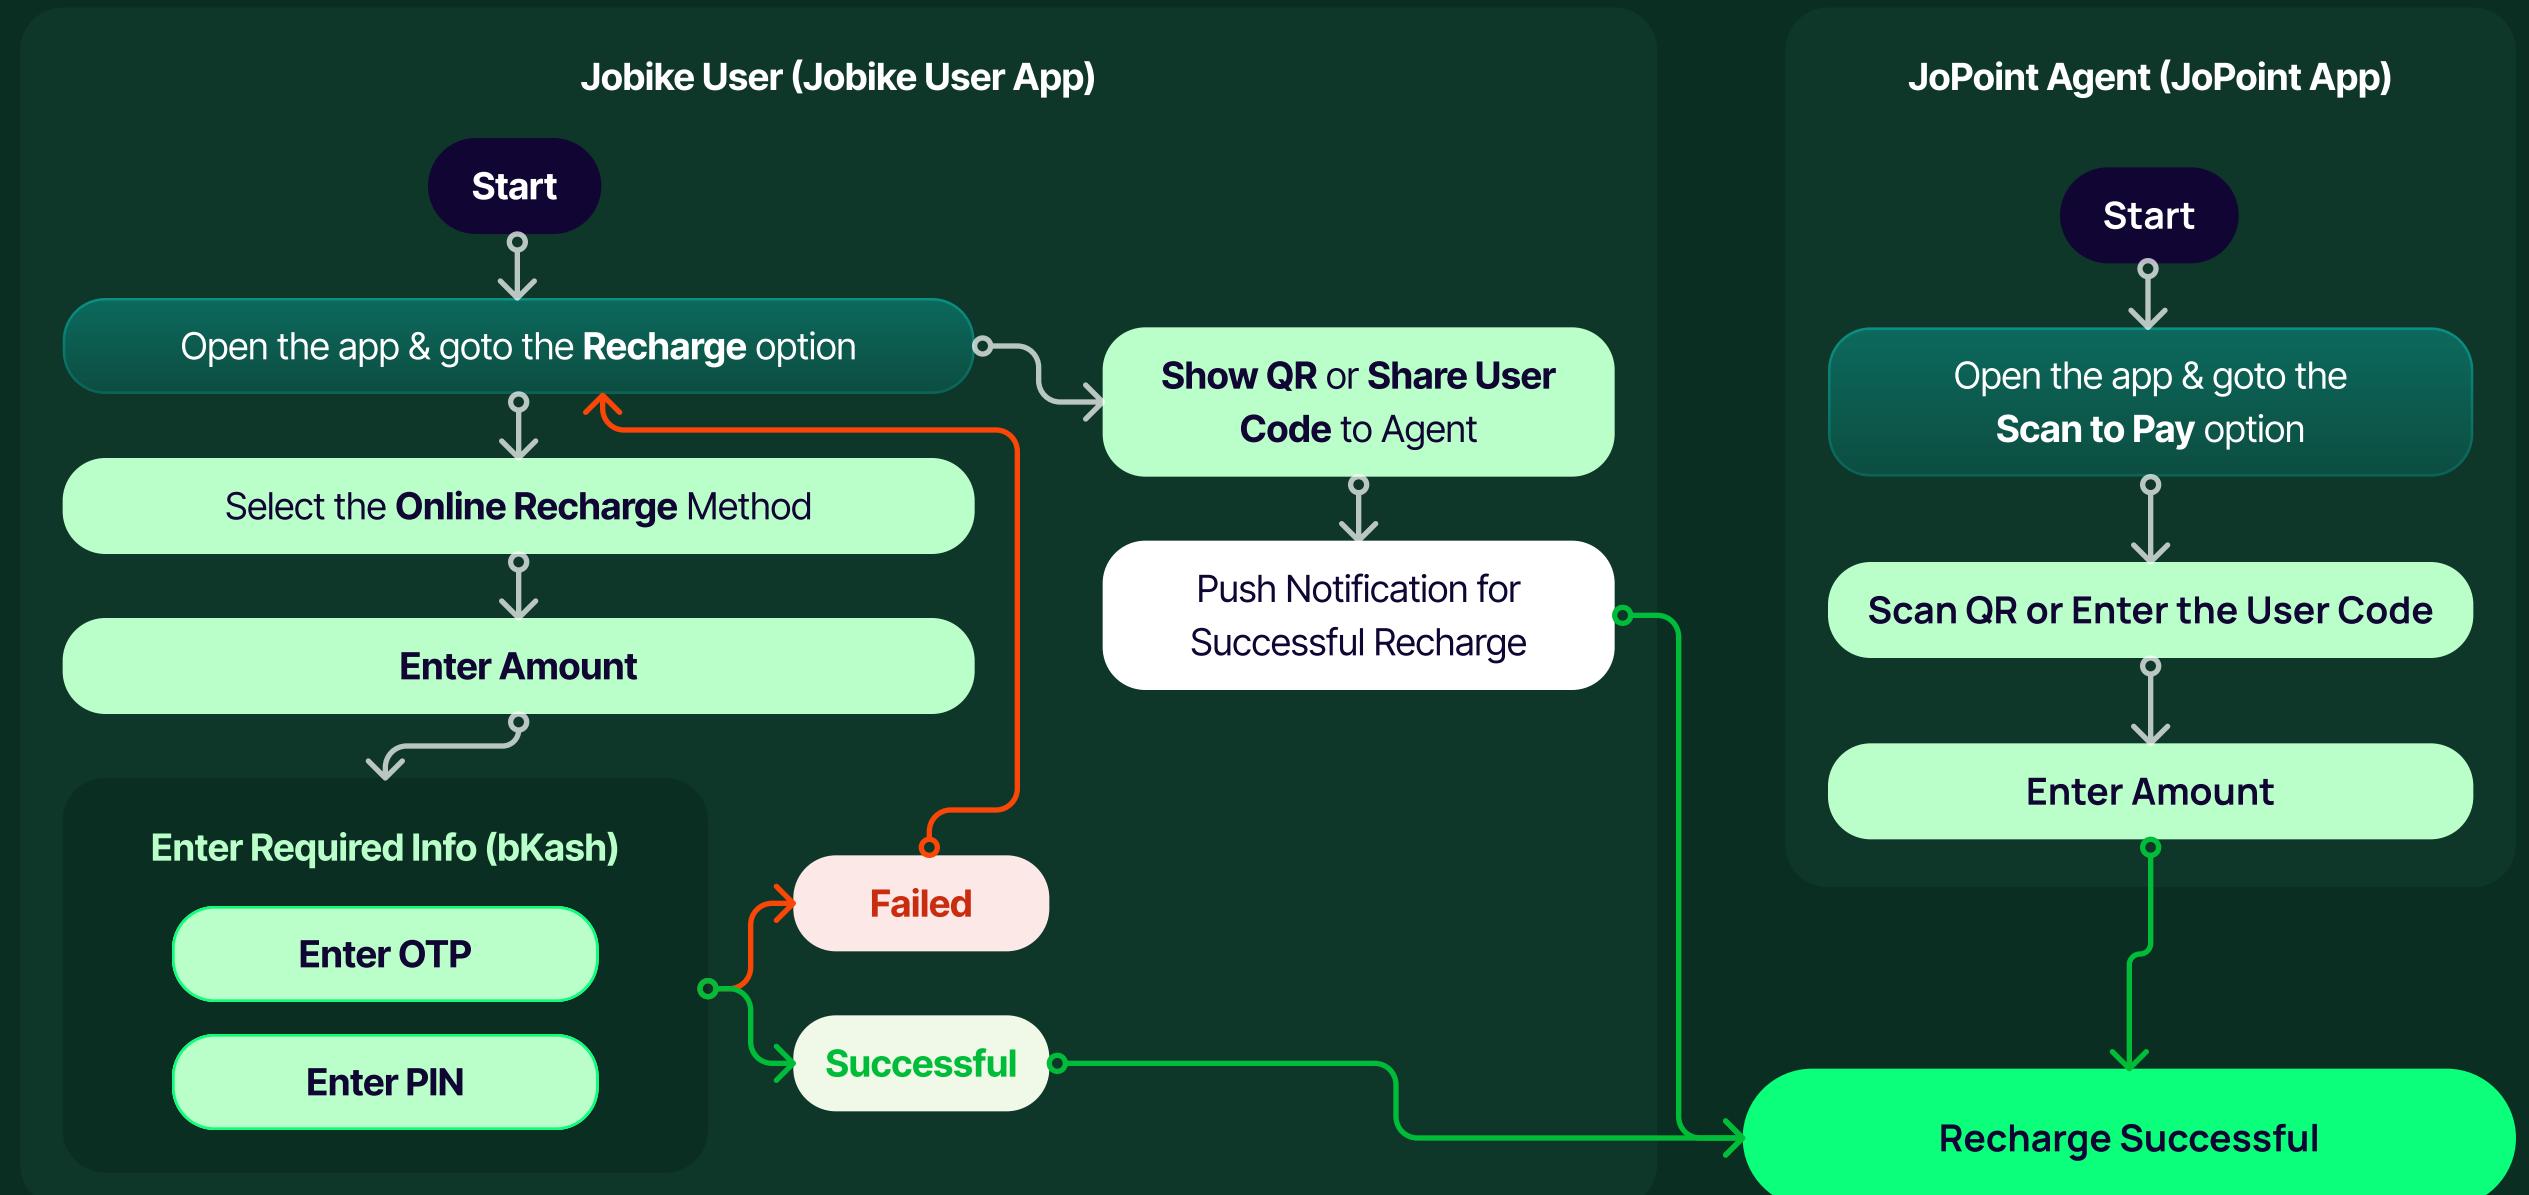

- We'll introduce the **online Jo-Credit recharge** options.
- We'll also redesign the recharge process at Jopoints.

The online recharge process is to be implemented by using 3rd party applications. Jobike tech team uses a hybrid mobile app development platform. So it is essential to keep it into consideration while designing the solutions.

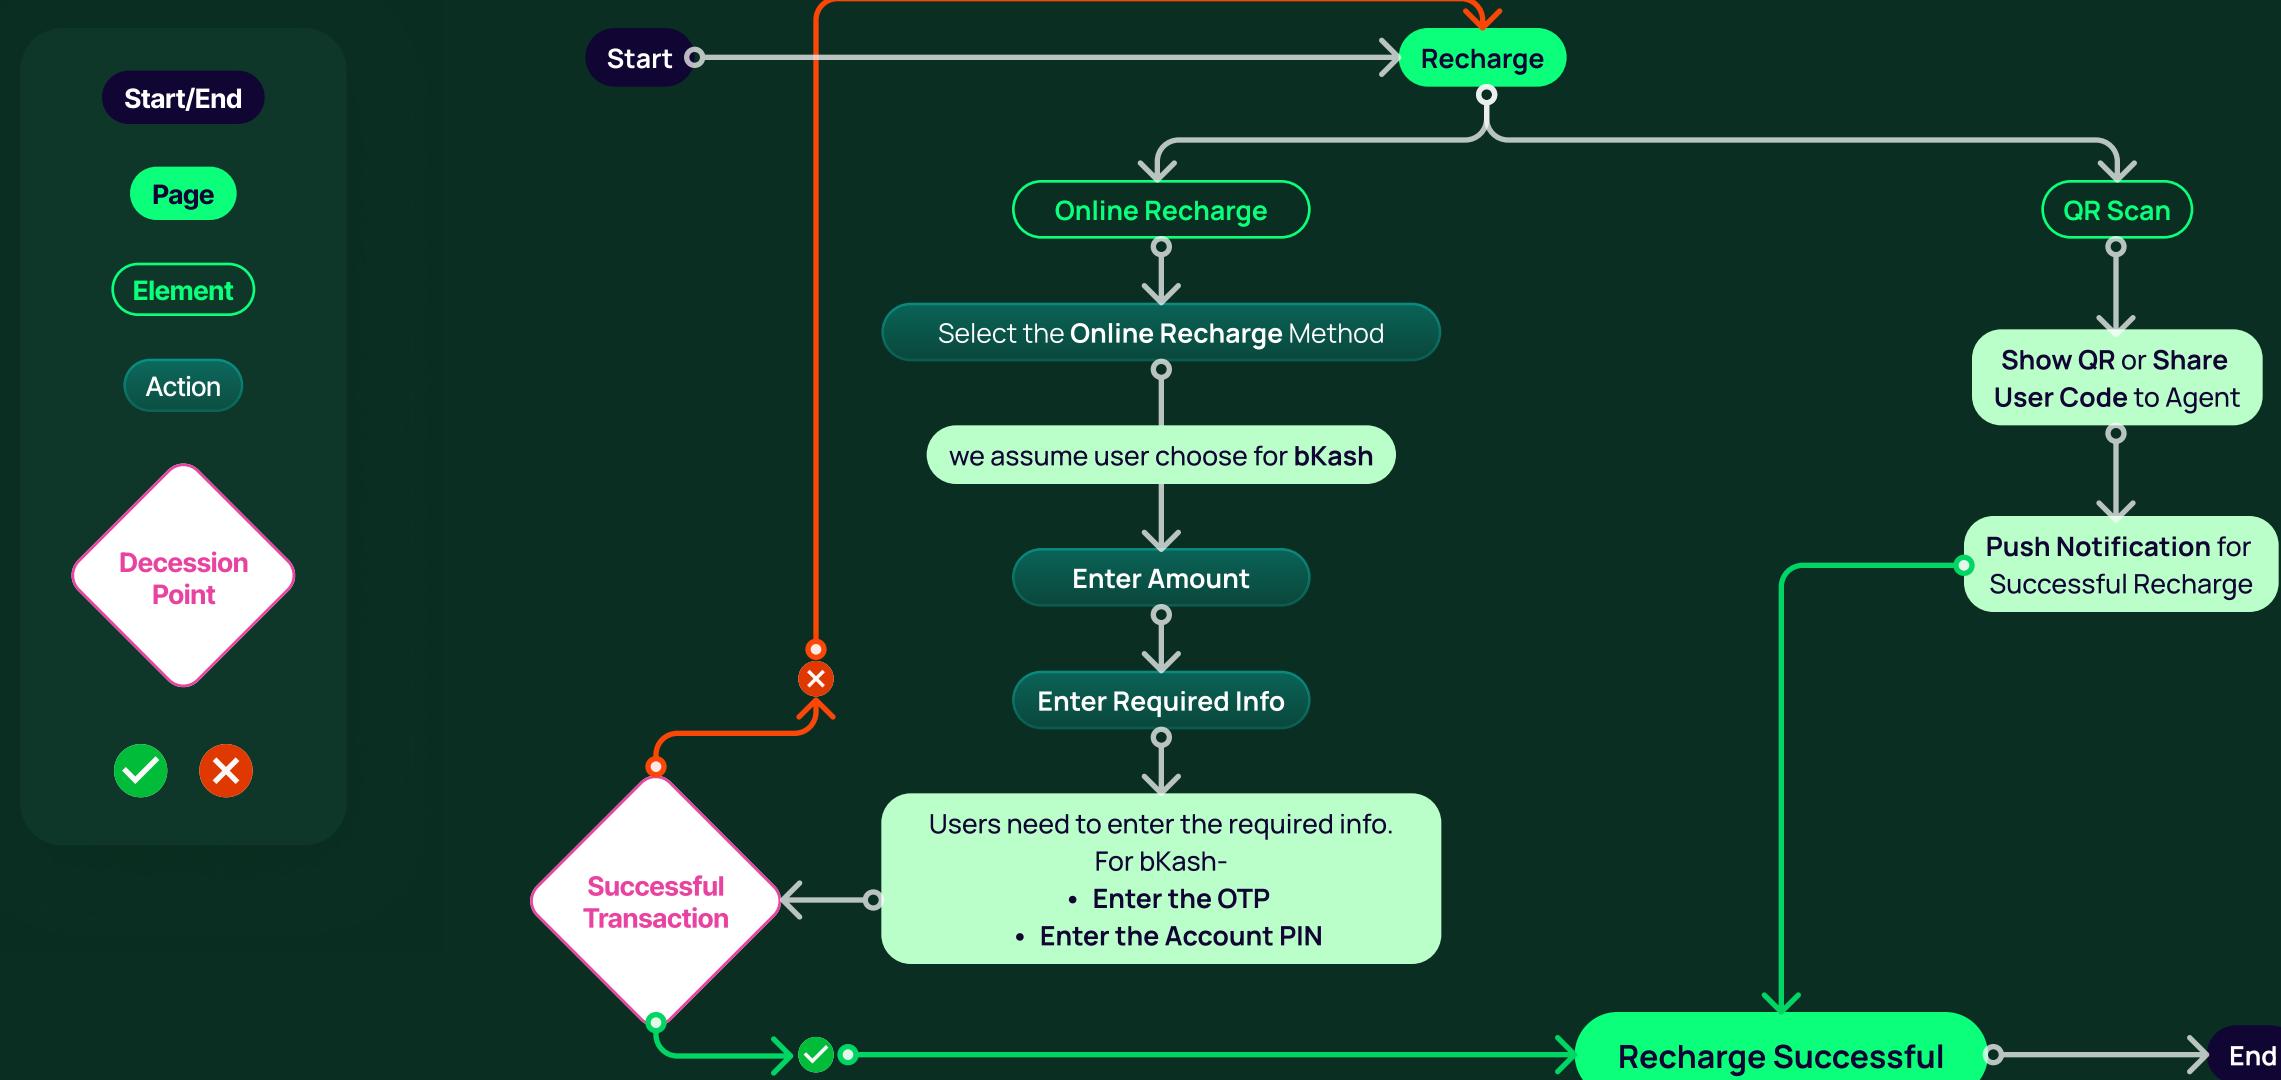

Next, I develop a flow chart of the process.

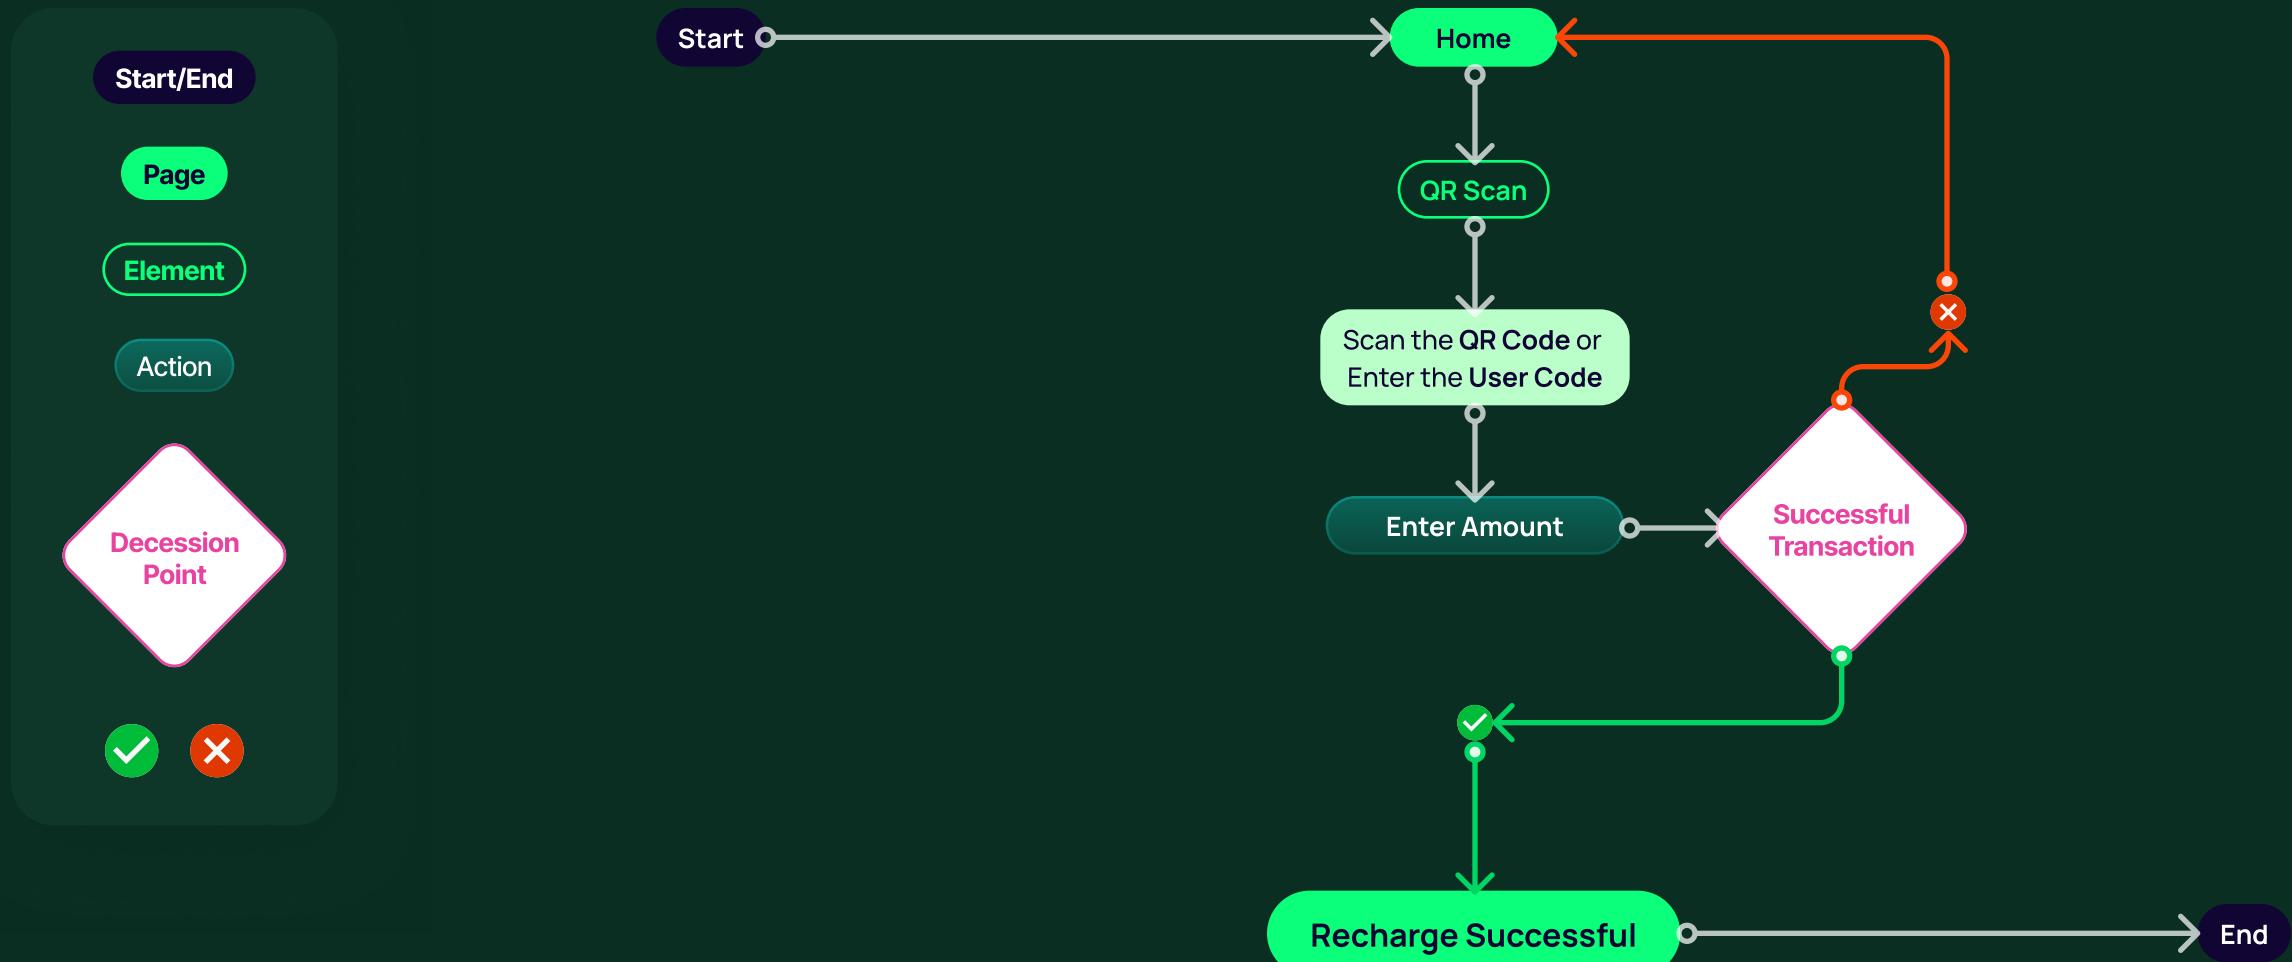

# Information Architecture

# User Flow (Jobike User App)

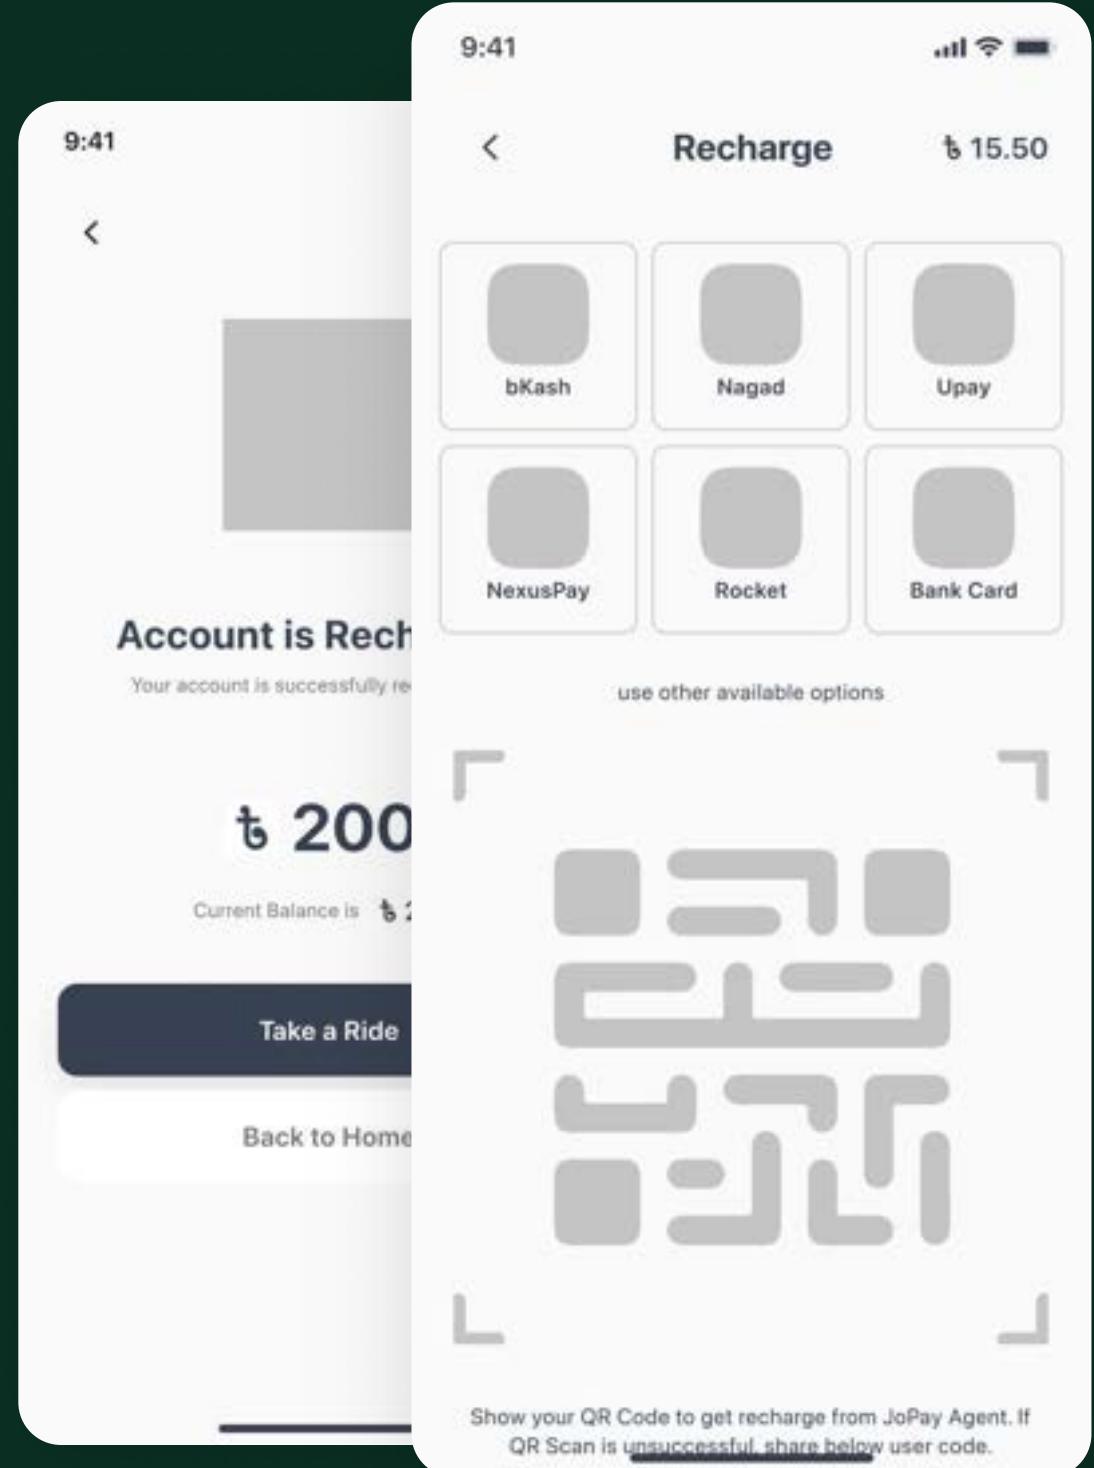

# User Flow (JoPoint App)

# Sketches & Wireframing

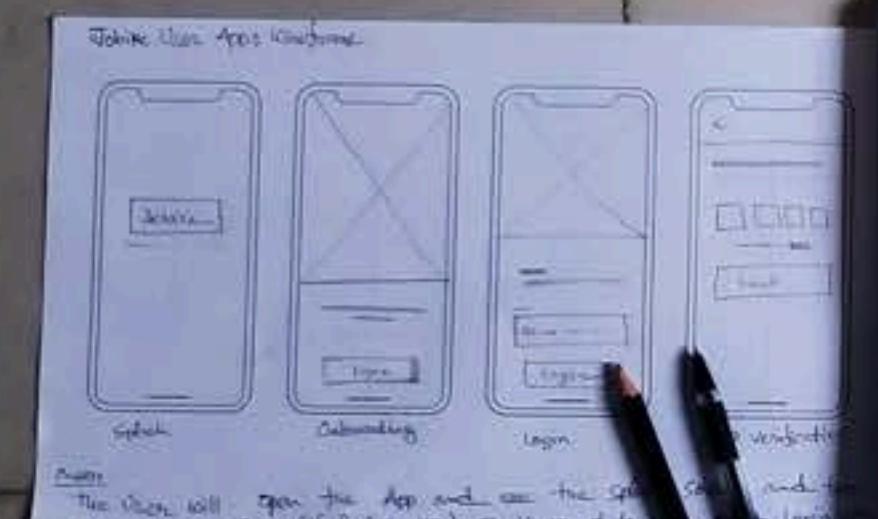

The following steps were to sketch wireframes based on the user flow maps.

- Creating wireframes helped me to visualize the ideas and gave us the basic structure for how users would use the app.
- When creating these wireframes, we kept the user needs from the earlier findings and research in mind.

# Wireframe (Jobike User App)

The user will open the App and see the split screen and tap on the advertising screen (if first time). It will prompt to phone Norton Watchtower app will be sent to his Norton account him to verify himself.

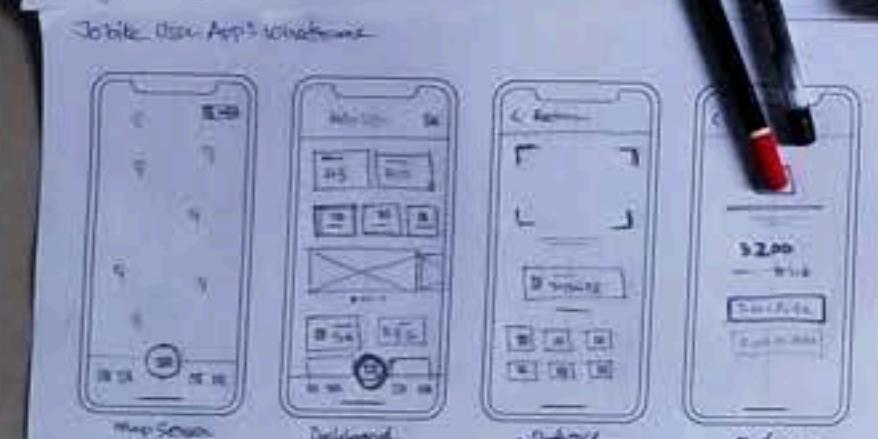

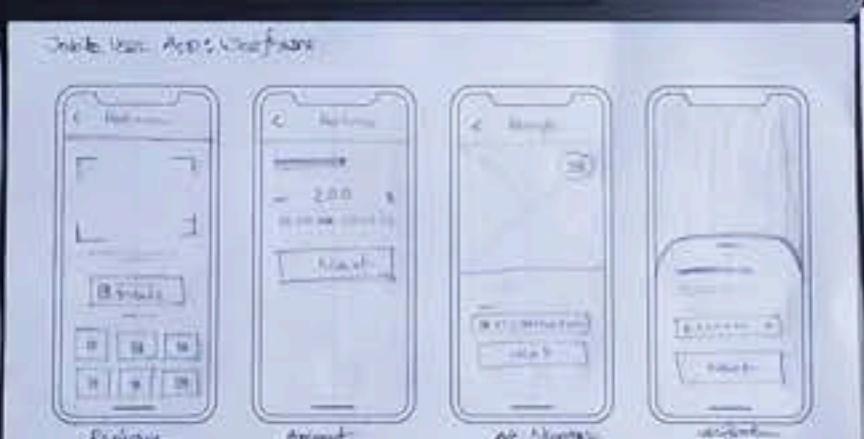

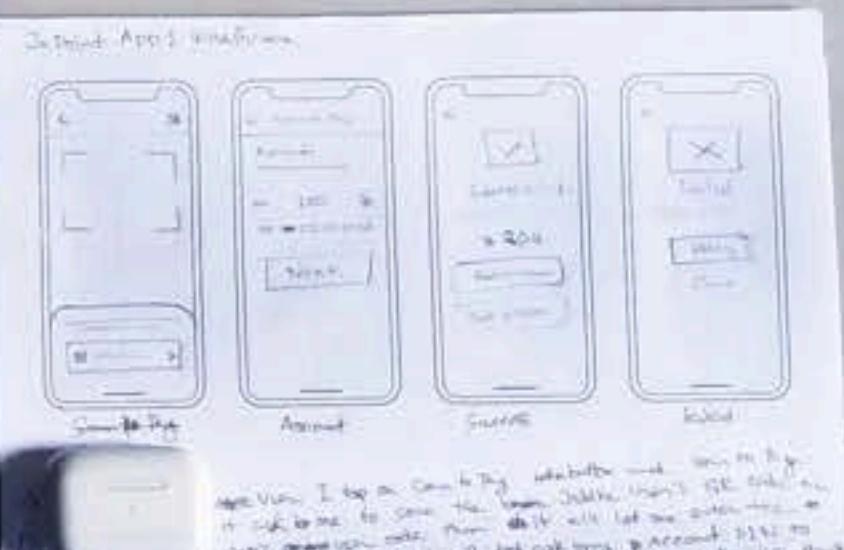

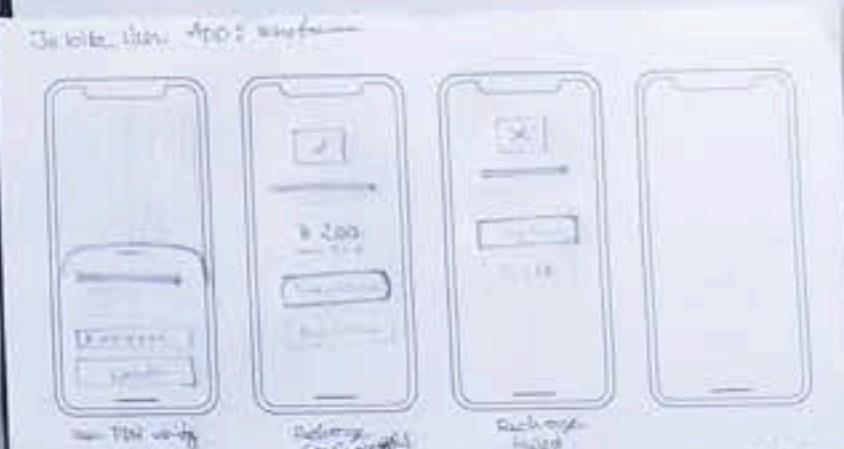

Chart (Continued) Reference  
Successional  
After we leave the area will be able to map more areas. The will cover the transition  
of the various L. Tropaeum Corridor of the Sierra to the Atlantic will show and trying  
to get all the reference page. We can also be arranged to exchange page  
However, some pages are probably page in Reference one. If we do not have the other areas and  
we can at least help each other to some parts. So, that makes since the USAF said to  
get their reference.

Cases 8 If I want to change my account by online, I have to select the "Change Profile" first. I selected it will prompt me to enter the telephone number that it will prompt with my 8 digit id no. Number. After that a verification code will be sent to my account phone number, and I have to enter it to verify myself. This process will be done in multiple such profile. Once (This was not yet)

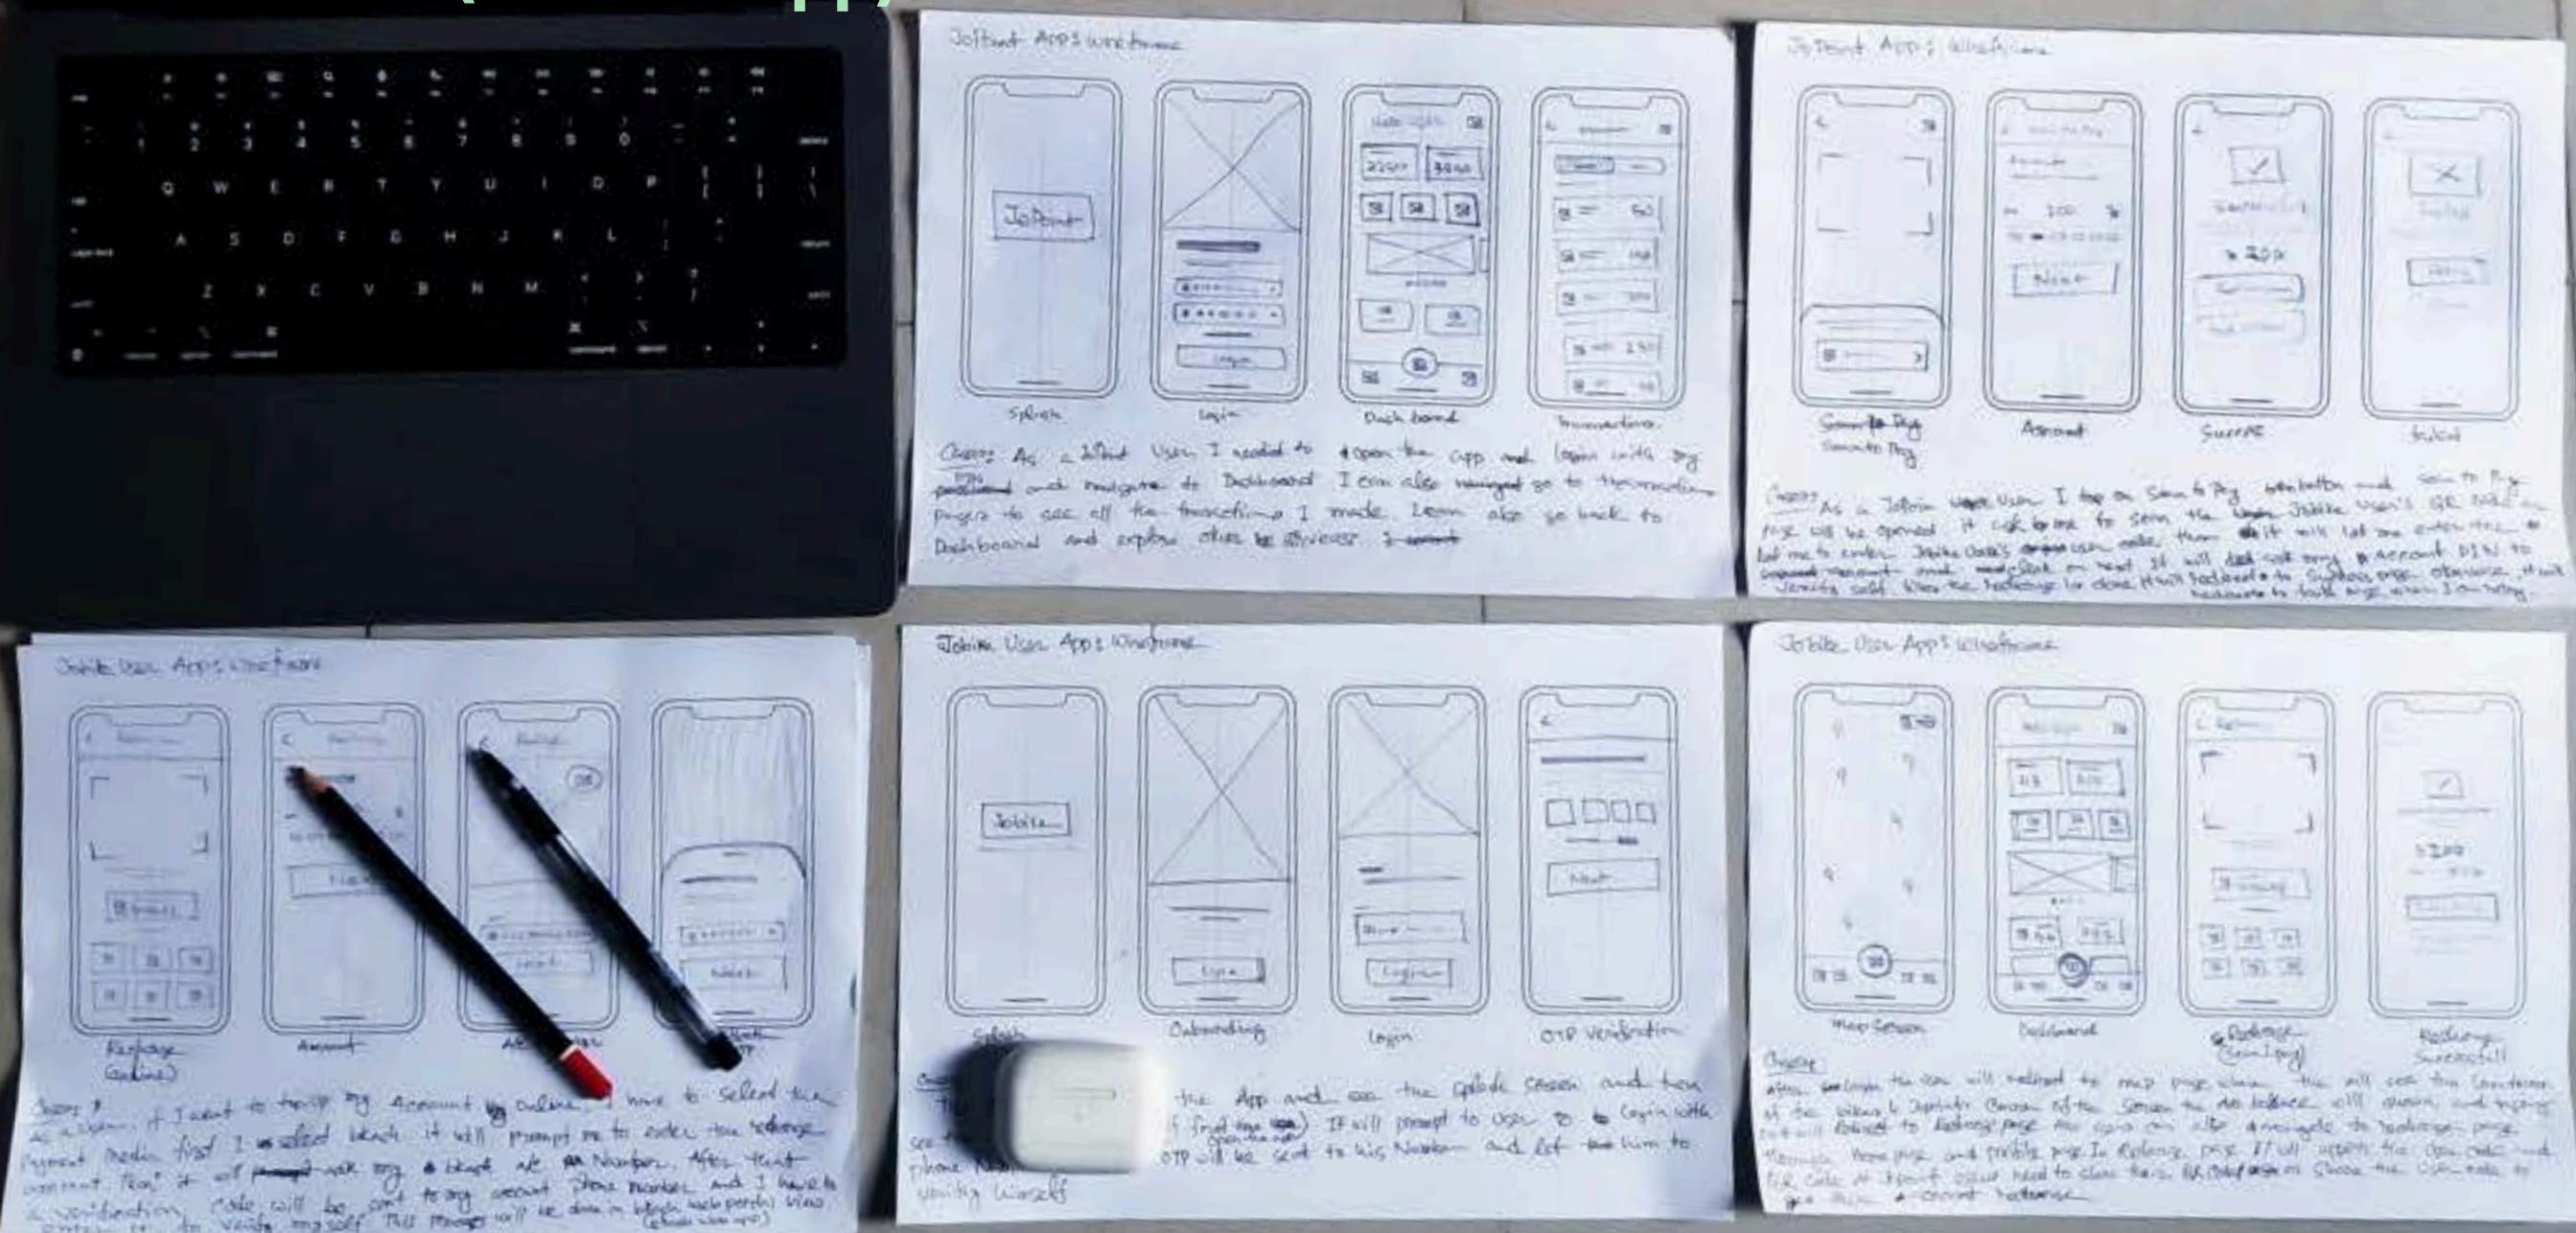

Afternoon I try to come to terms with another man who is trying to  
get me to come to come to him. He says, "I'll talk to you,  
but I don't want to make your debt will let you go." I  
say, "I'll do what you want, but I'll not talk to you." He says, "I'll talk to you,  
but I don't want to make your debt will let you go." I say, "I'll do what you want,  
but I'll not talk to you."

Based After yet successful CTP validation, what have to solve, may need add PDU to existing ones because by both way map for the transmission. Since users will connect to network without connecting to each other. For the transmission, we can't use a cell network to exchange failed page through the user's own connection.

# Wireframe (JoPoint App)

## Prototyping & Testing

While creating the wireframes, I always built the flow and low fidelity prototype and continuously conducted a series of sessions for usability testing.

- I have done several testing sessions with a close group of users.

## Design Prototype

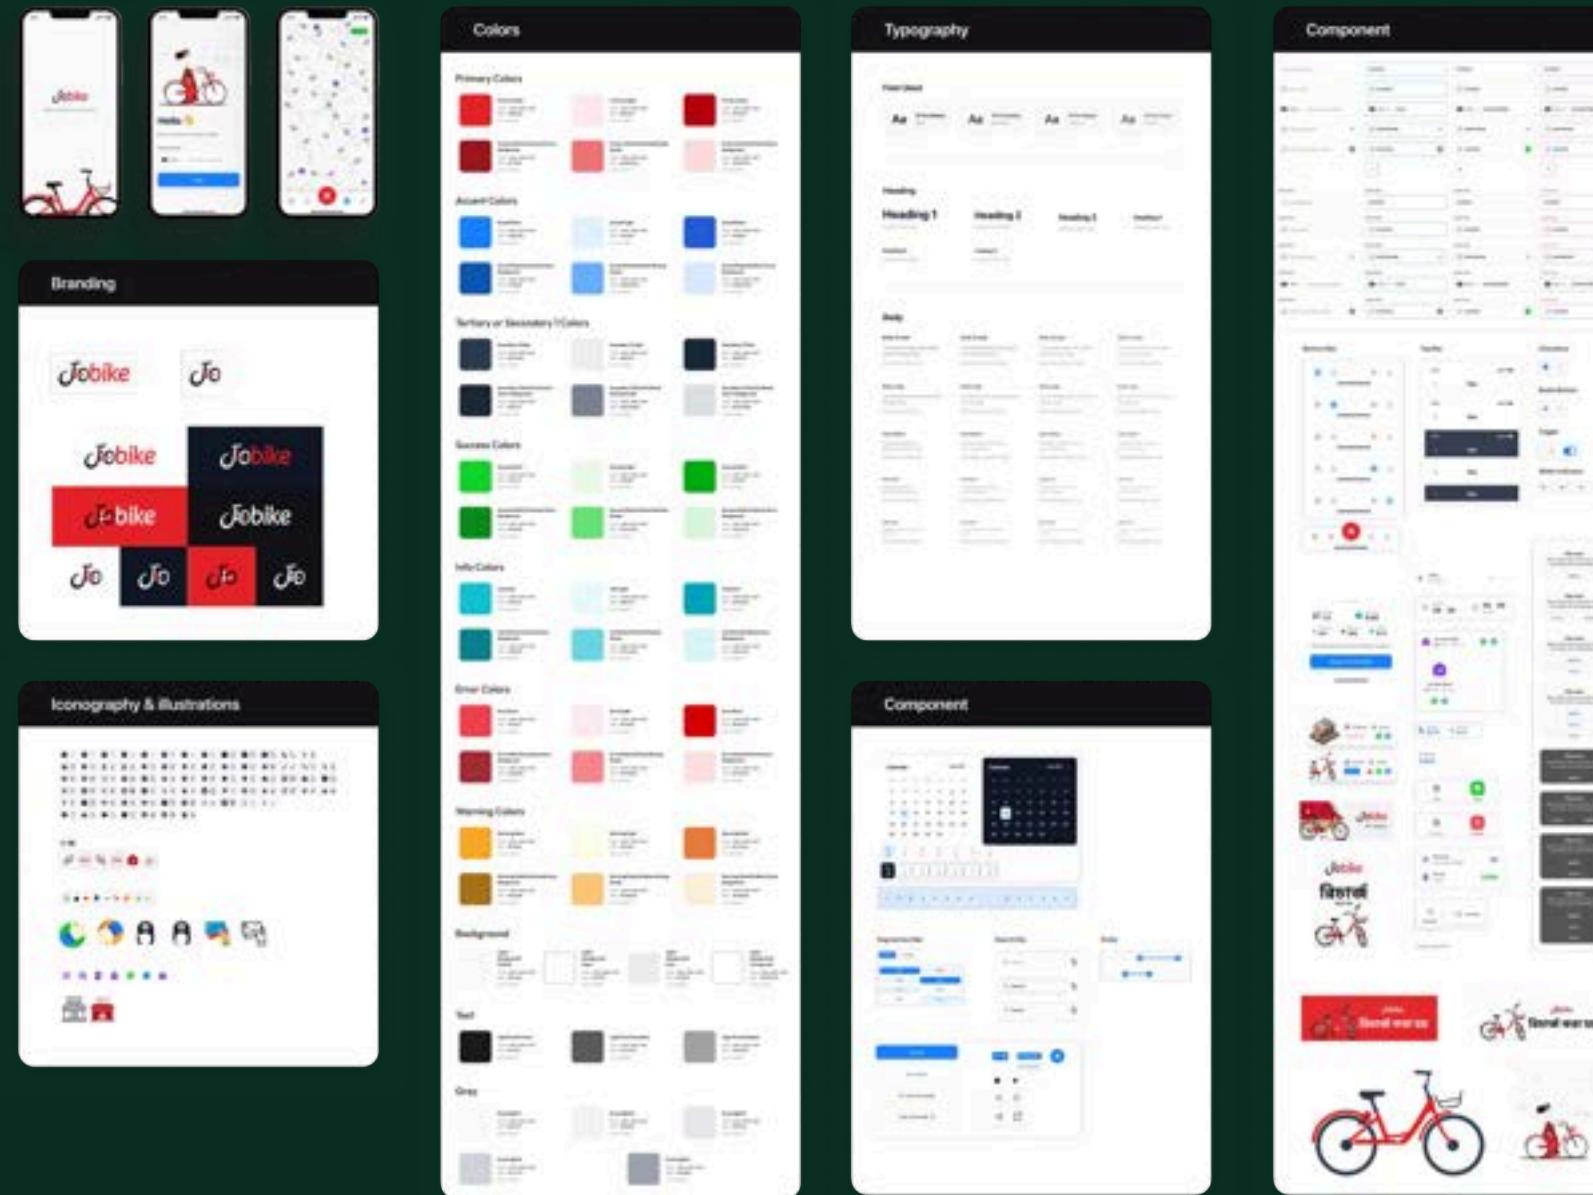

**Jobike User App**

**JoPoint App**

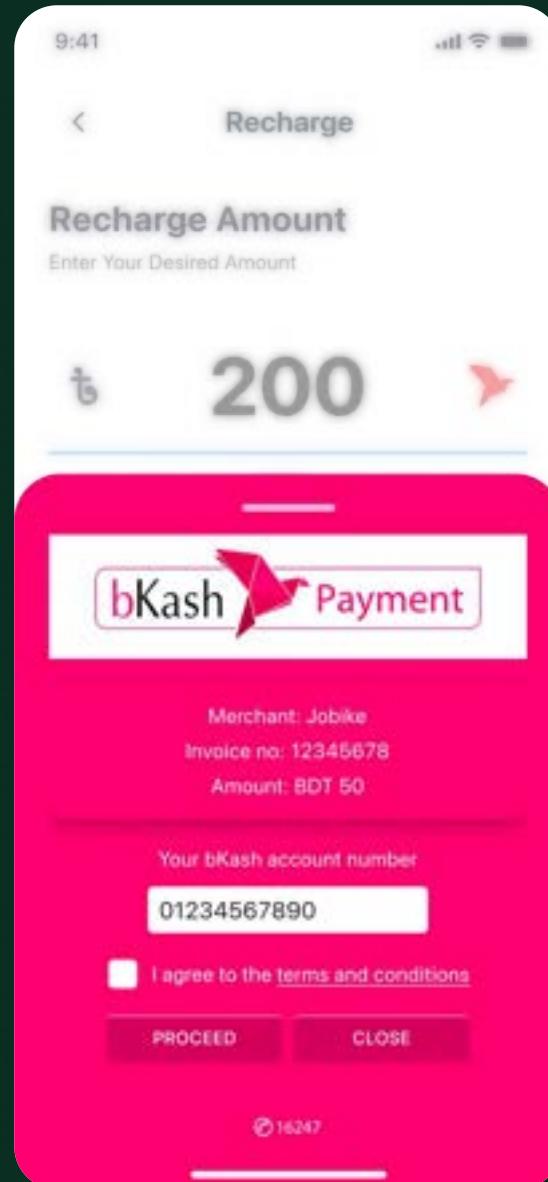

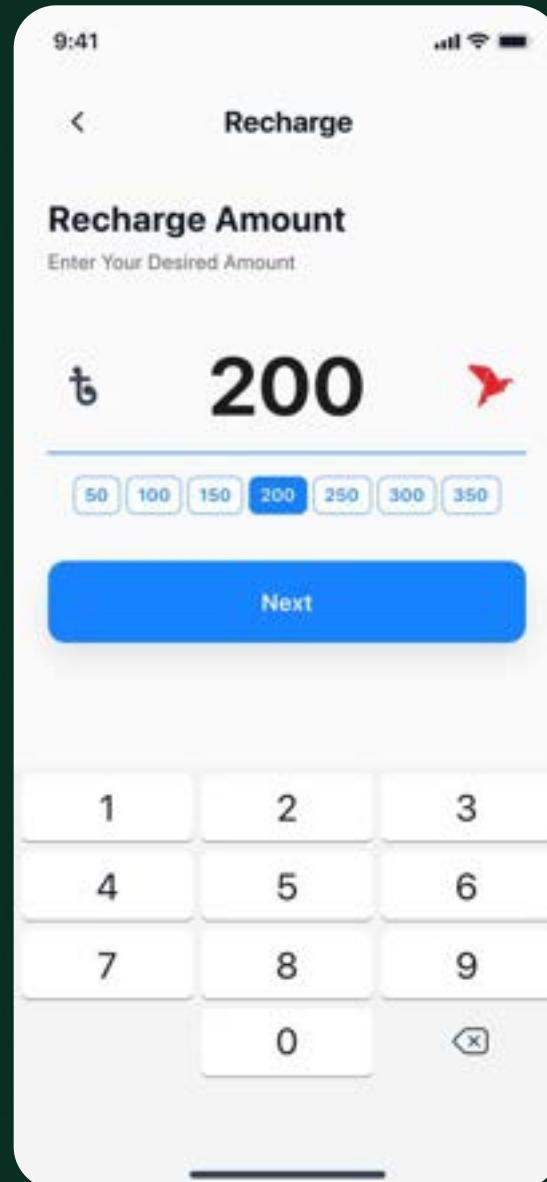

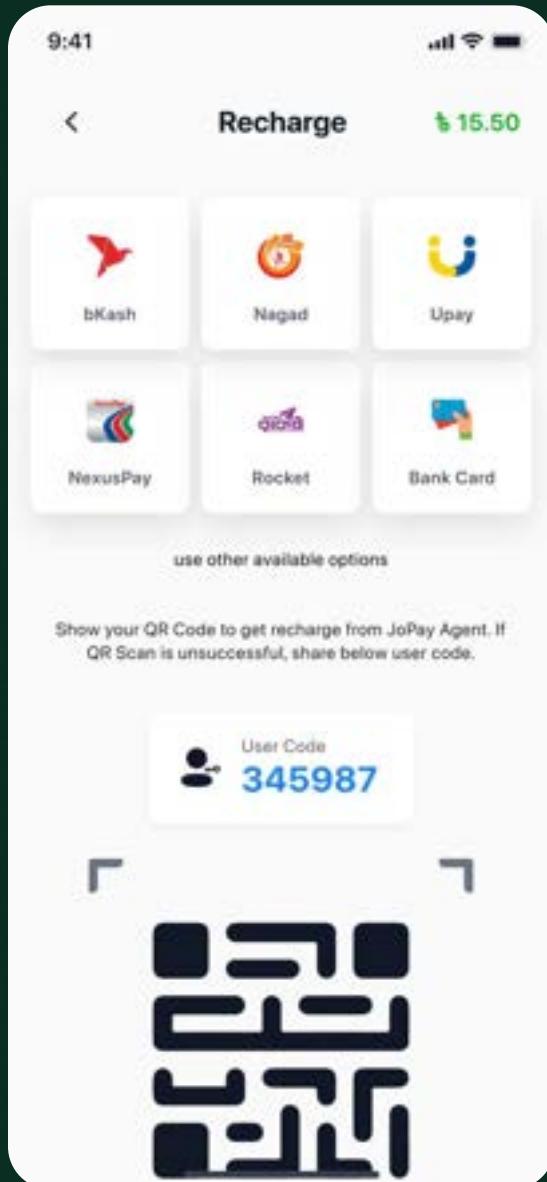

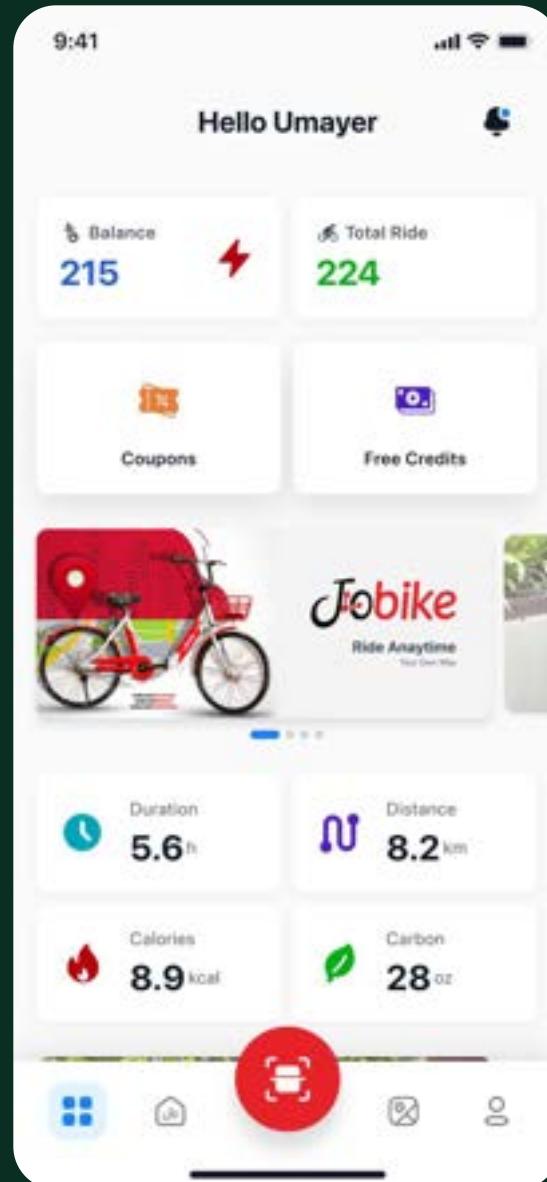

# UI Design

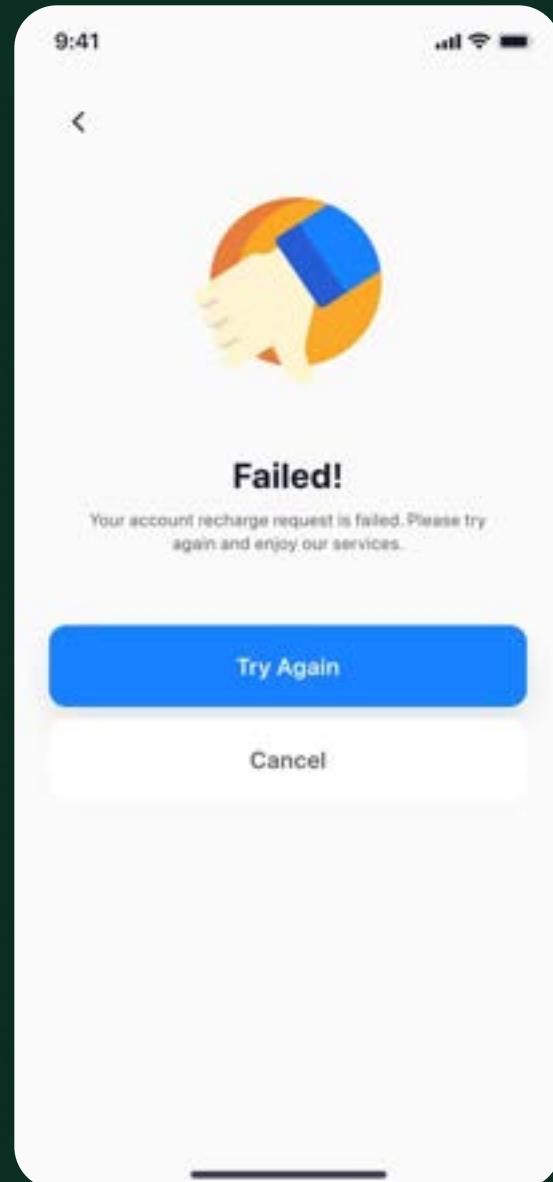

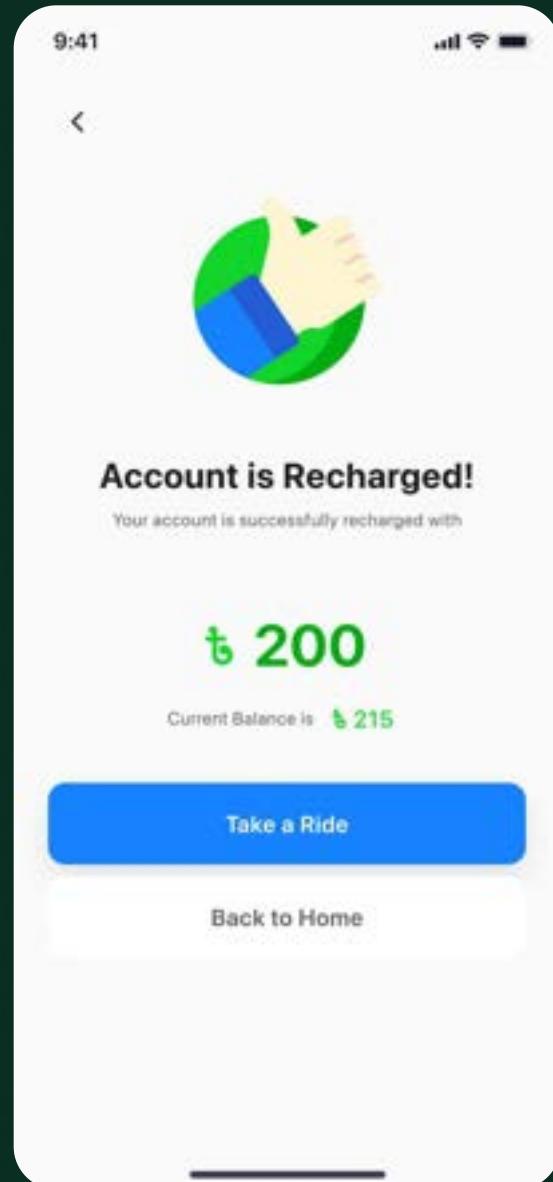

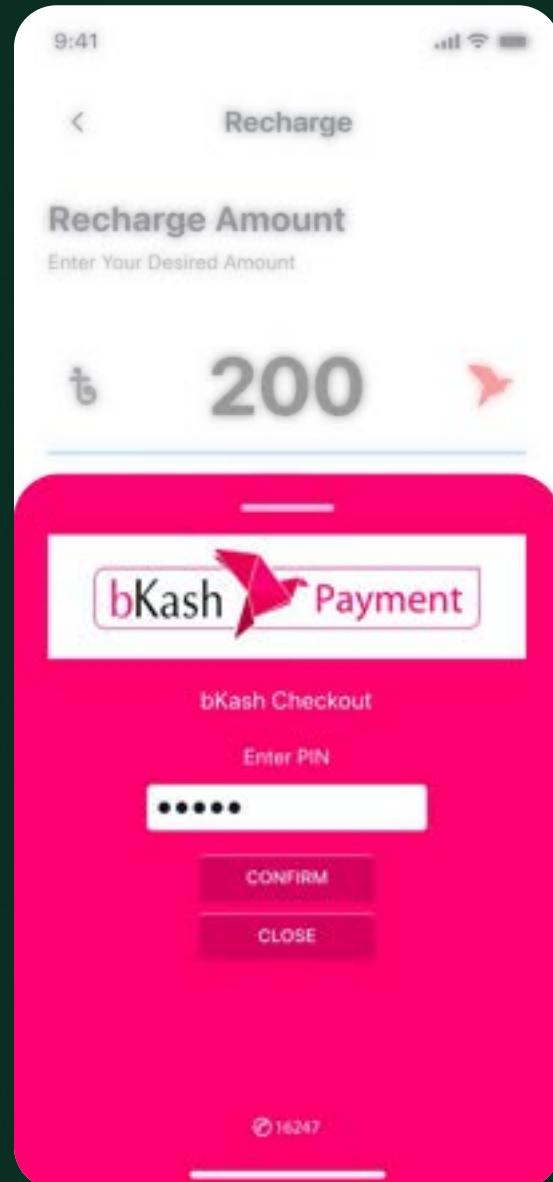

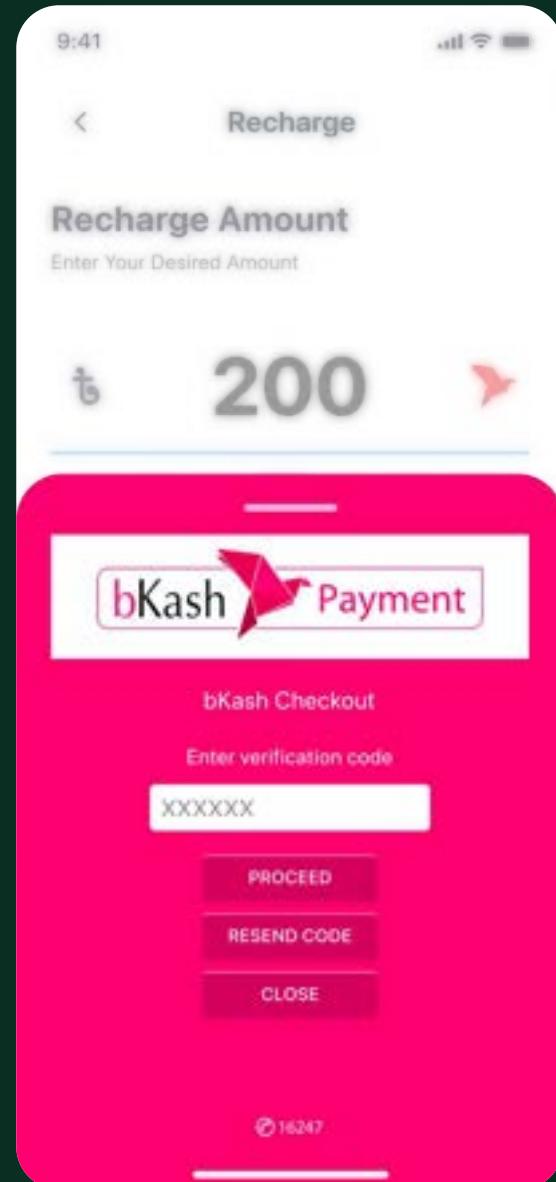

Before starting the UI design process, I always built a highly customisable design system to create a design language. It helps us a lot in creating user-friendly, accessible, high-fidelity designs.

- I have designed a design style guideline and reusable components.

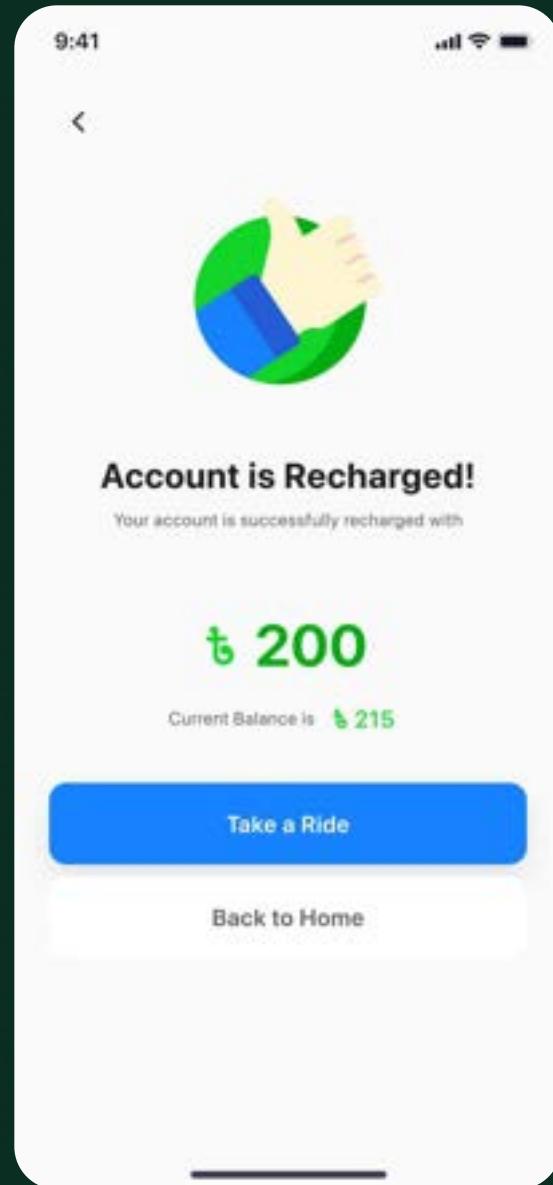

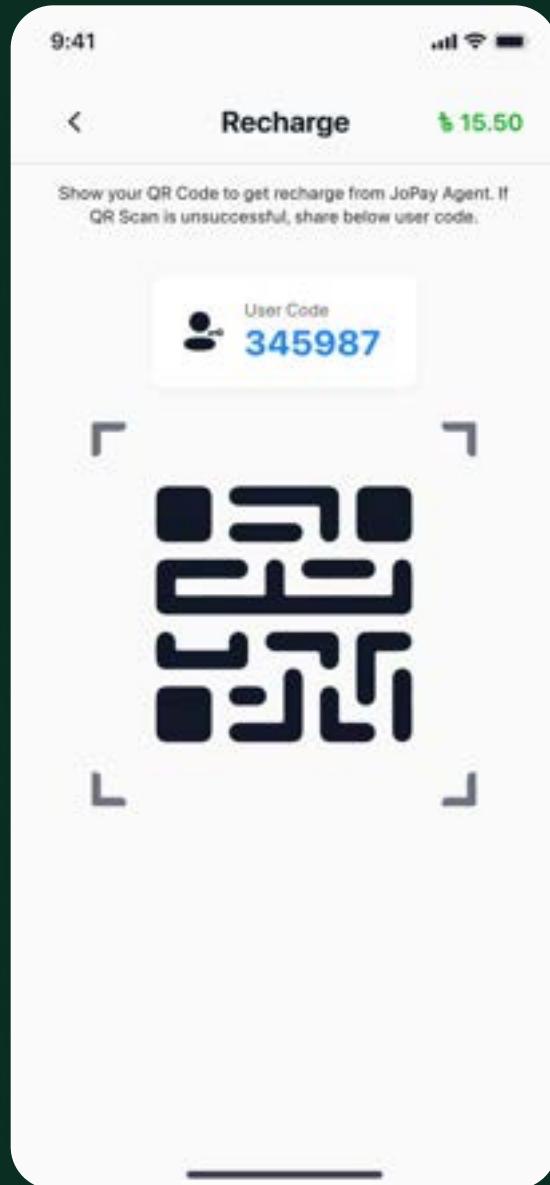

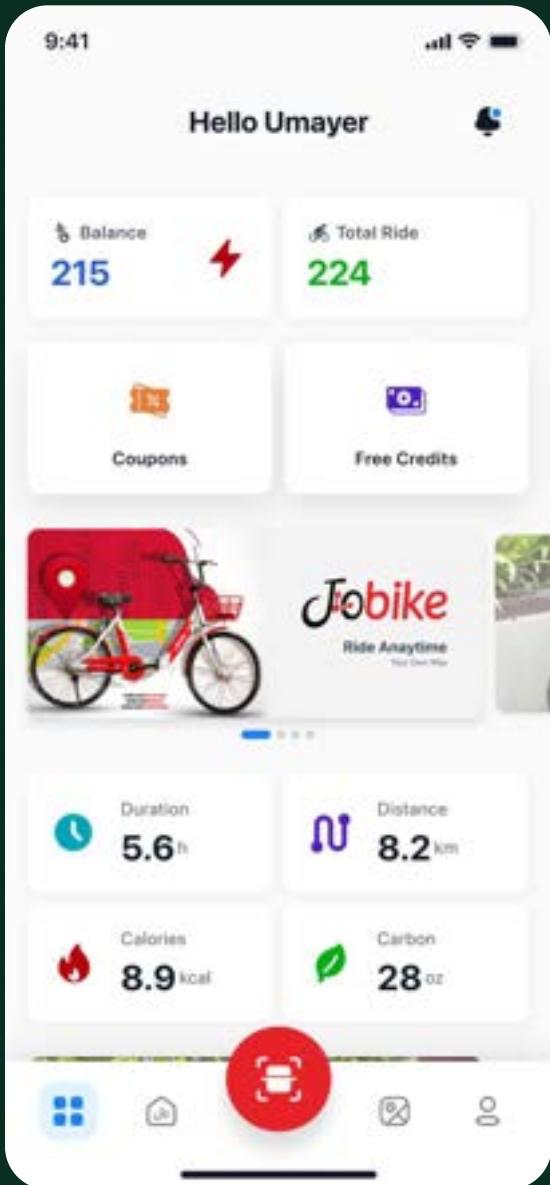

# Jobike User App (Online Recharge)

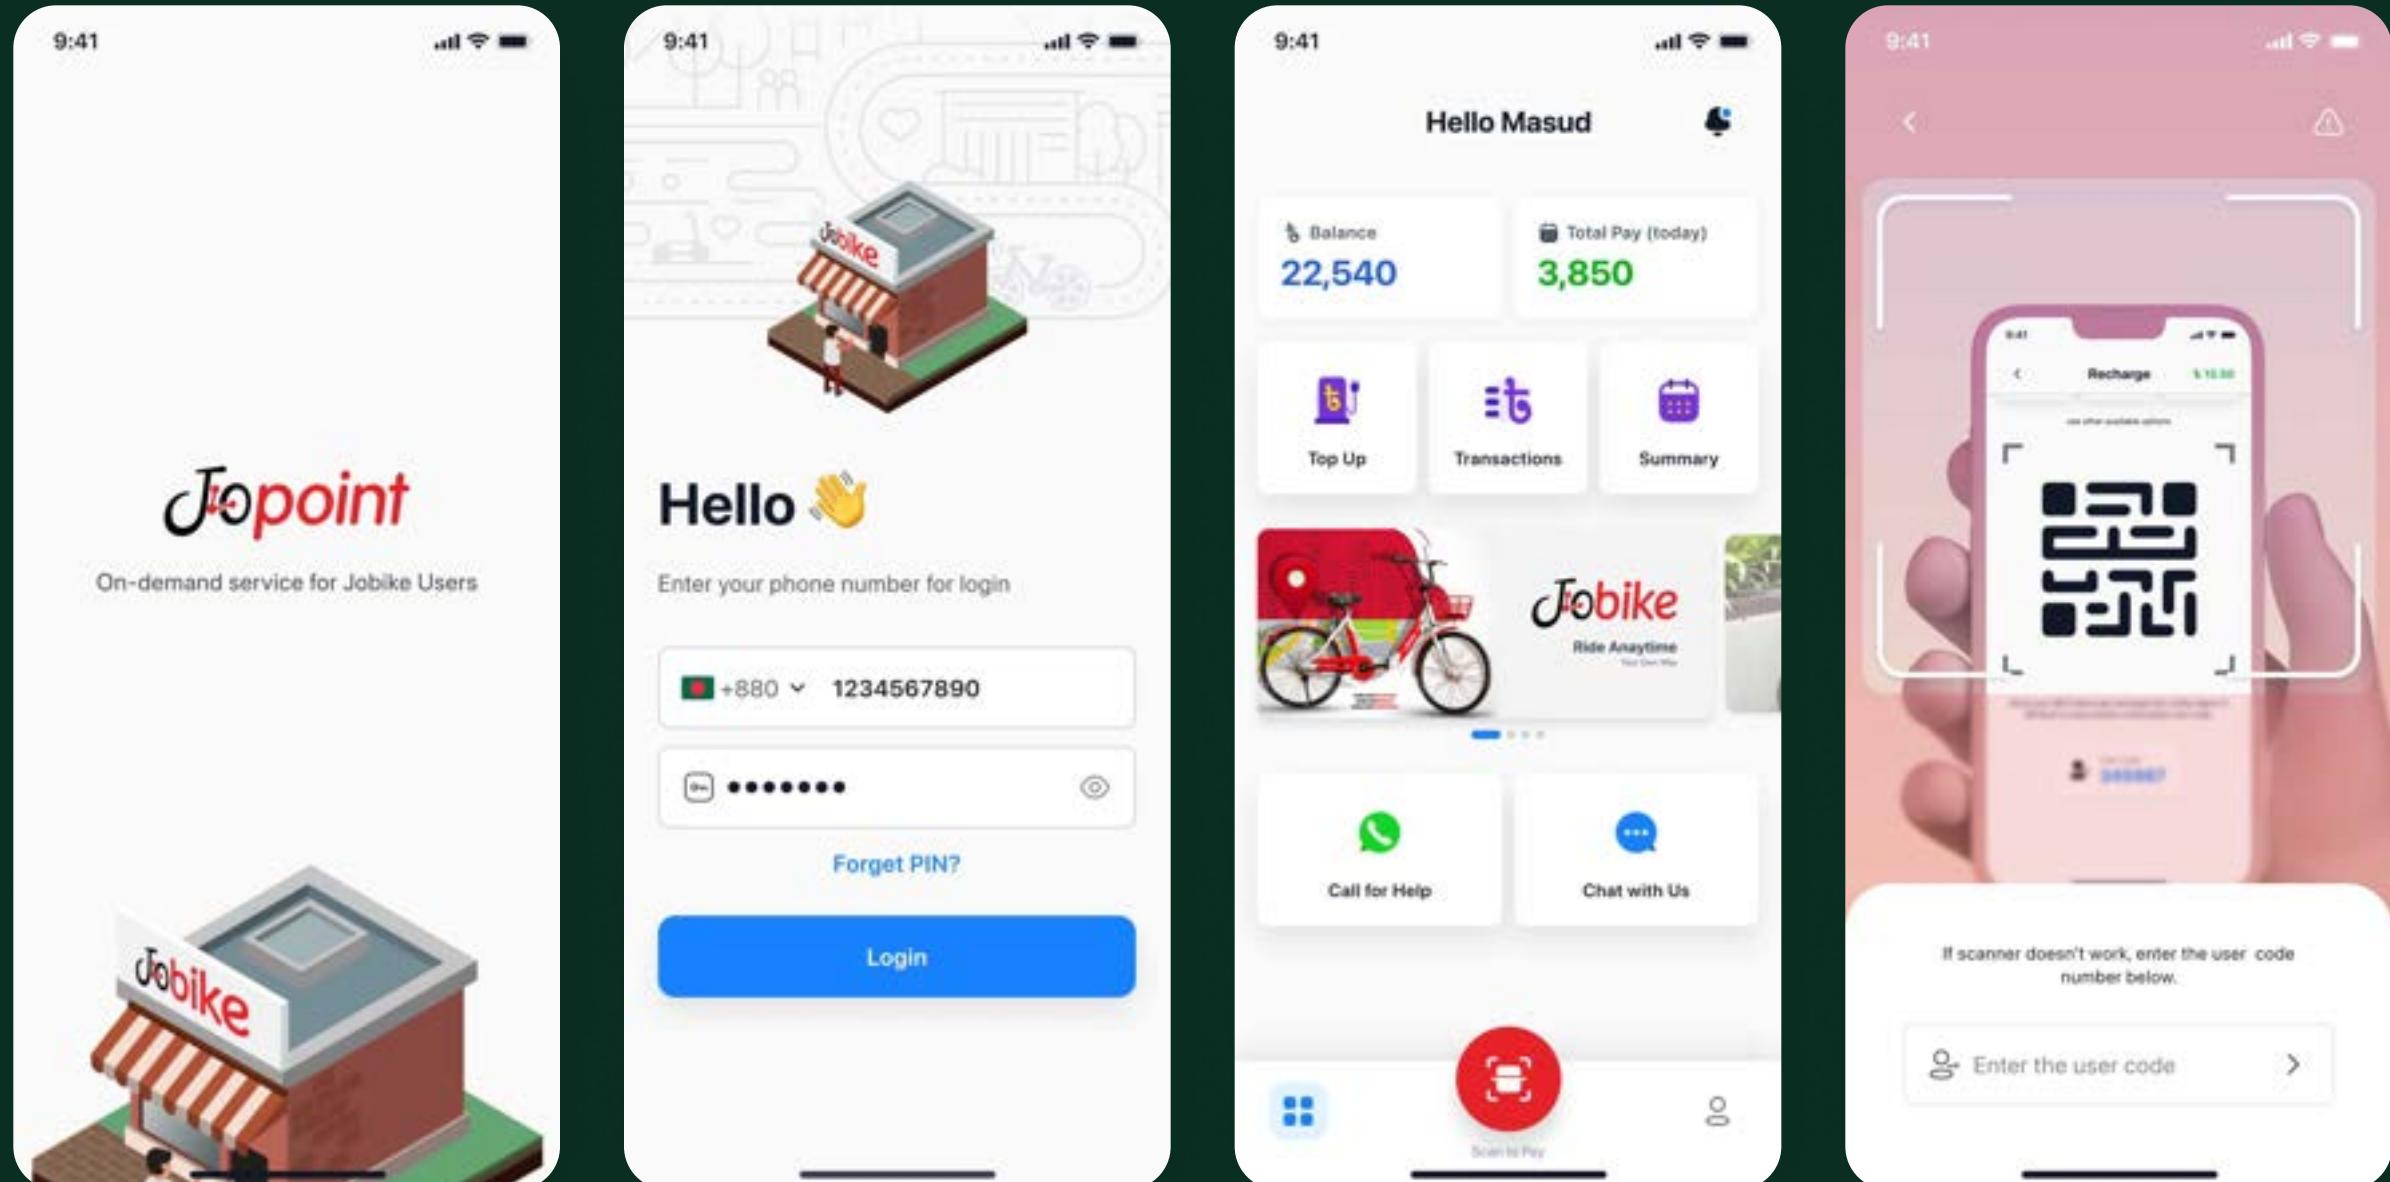

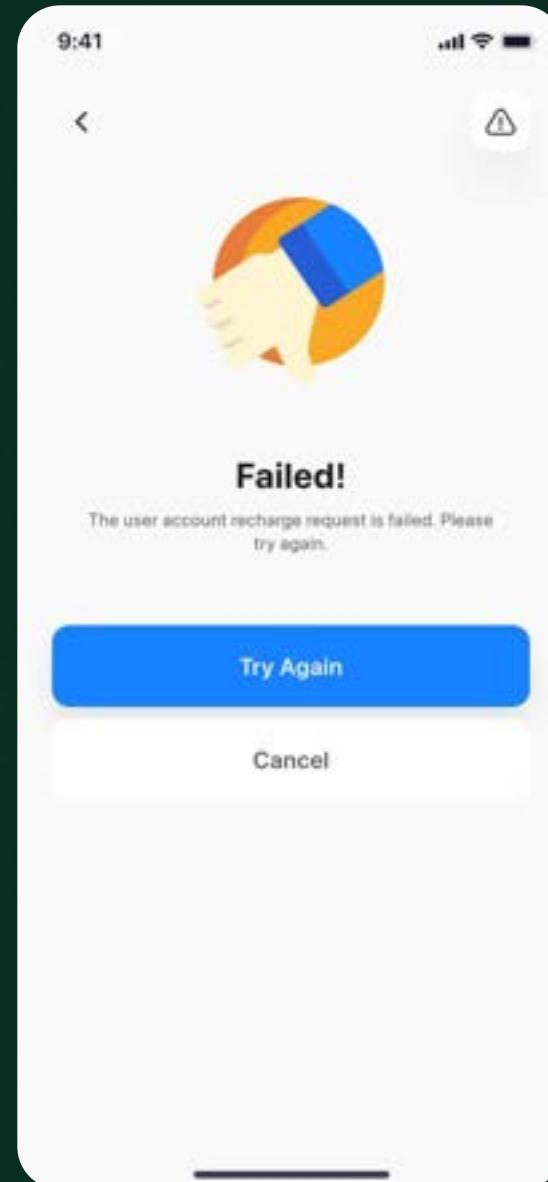

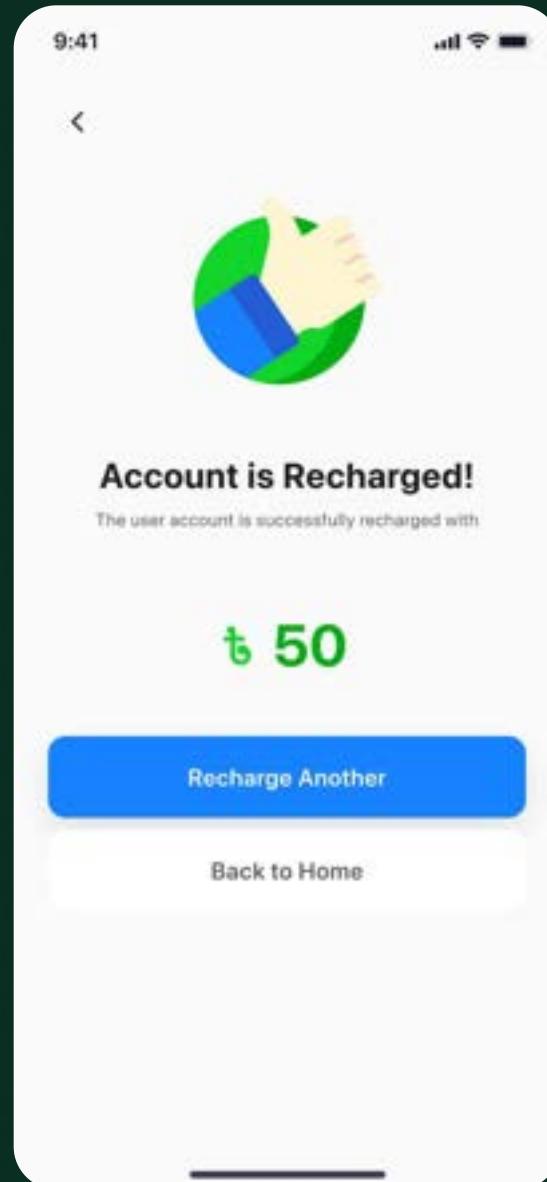

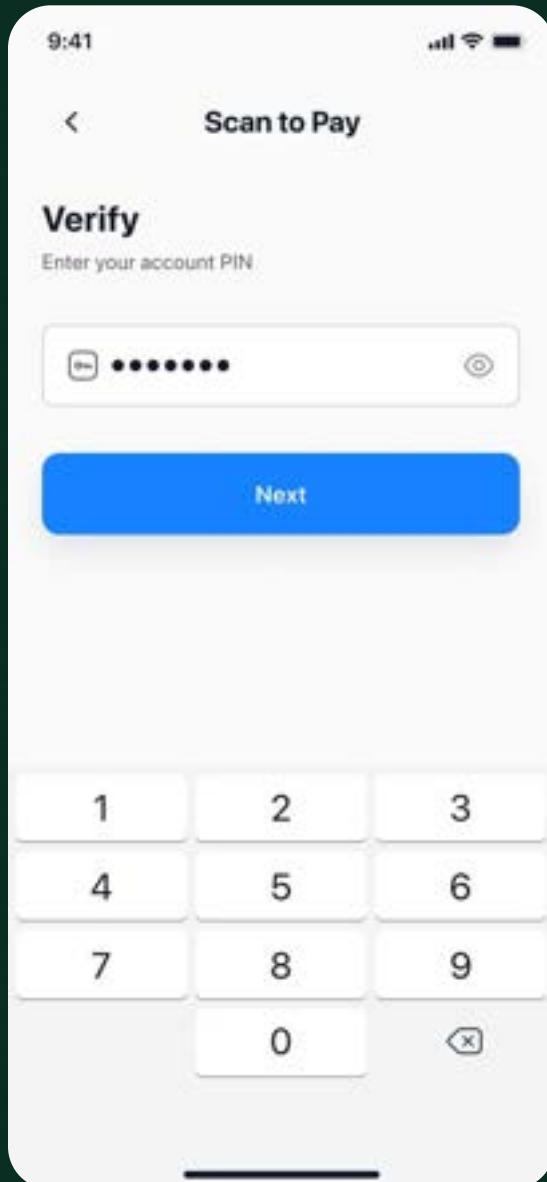

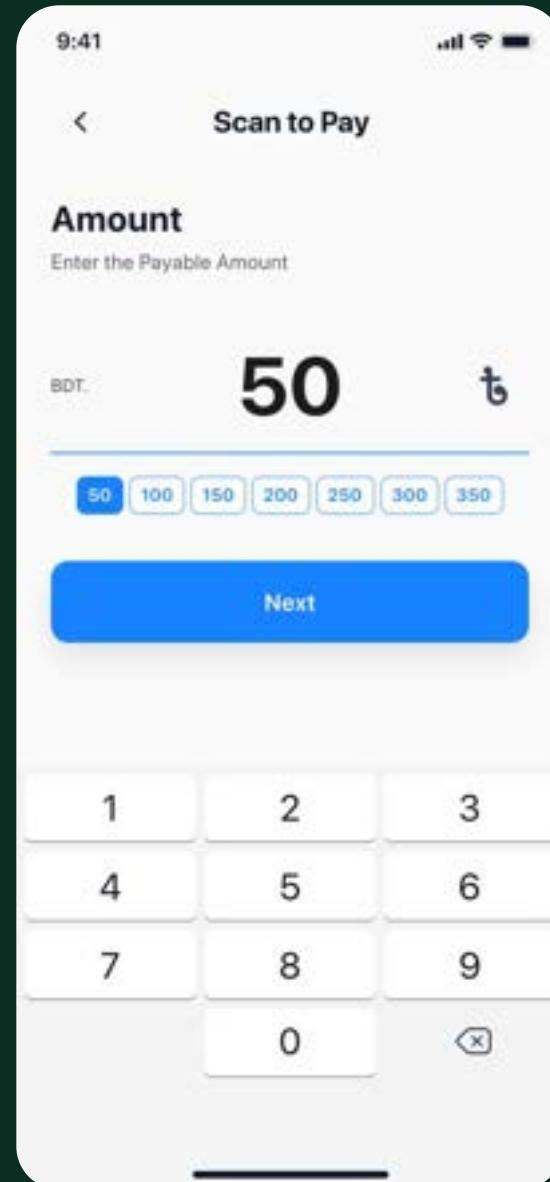

# Jobike User App (Scan to Pay)

# JoPoint App (Scan to Pay)

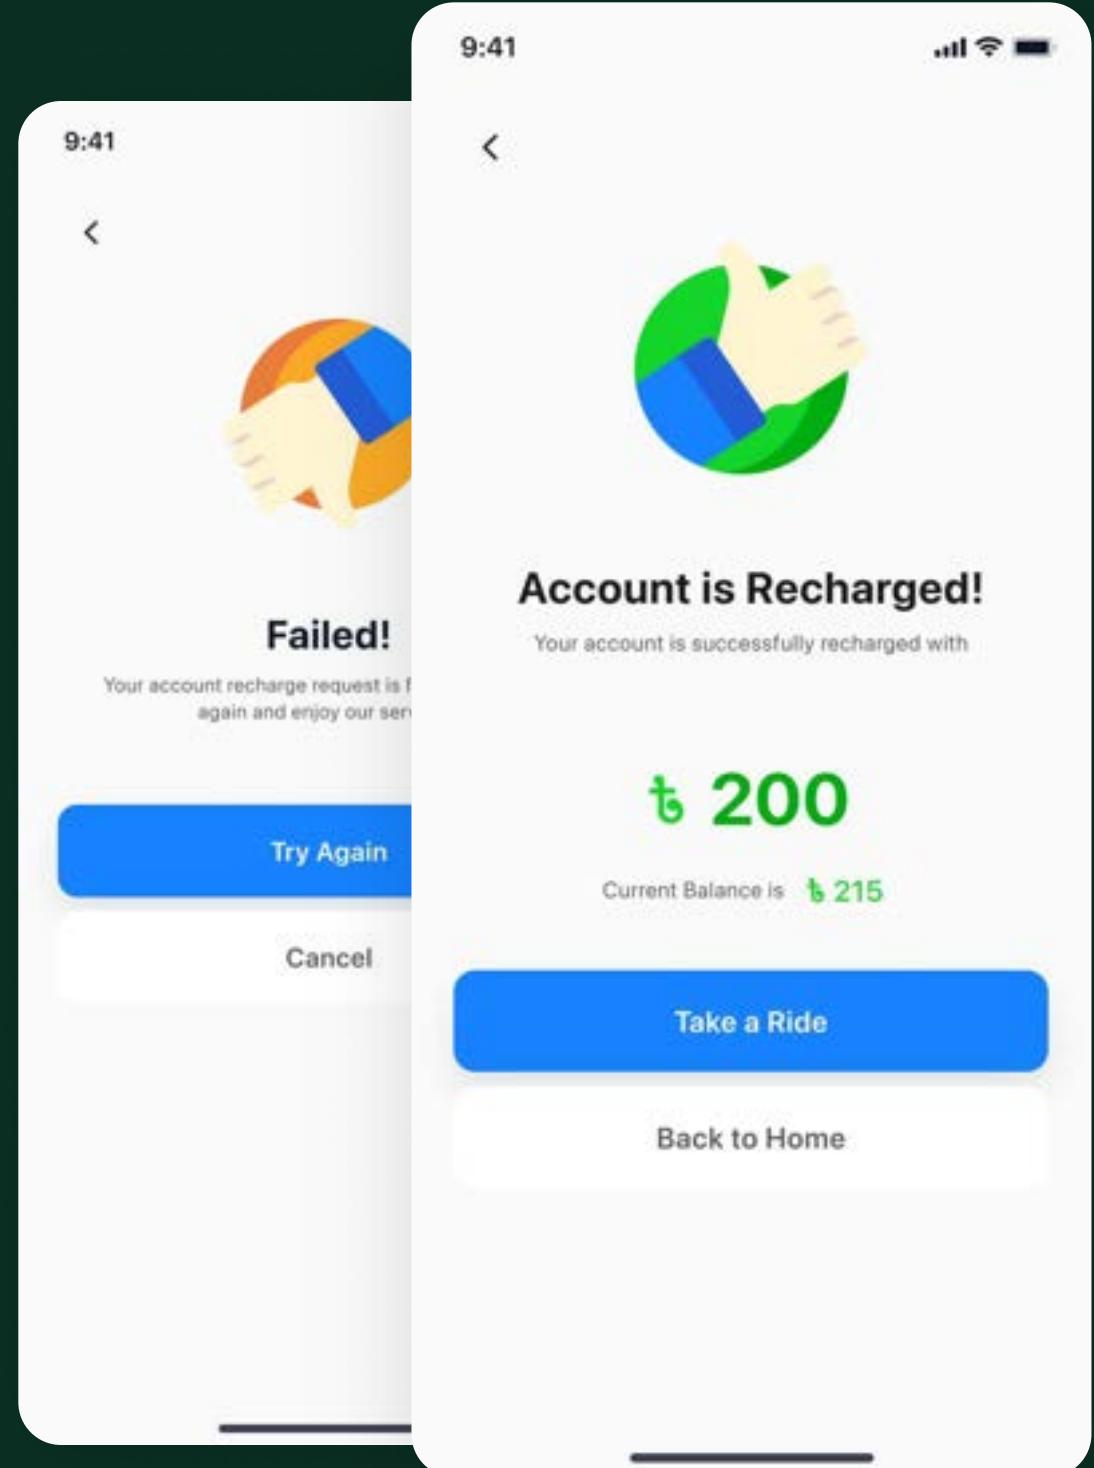

# Usability Testing

After applying UI elements to our wireframes, we created a high-fidelity prototype.

We conducted three smaller in-person usability testing sessions.

The goal was to assess the app's overall usability and identify areas for improvements that could facilitate the completion of the tasks. The participants were given the same set of jobs.

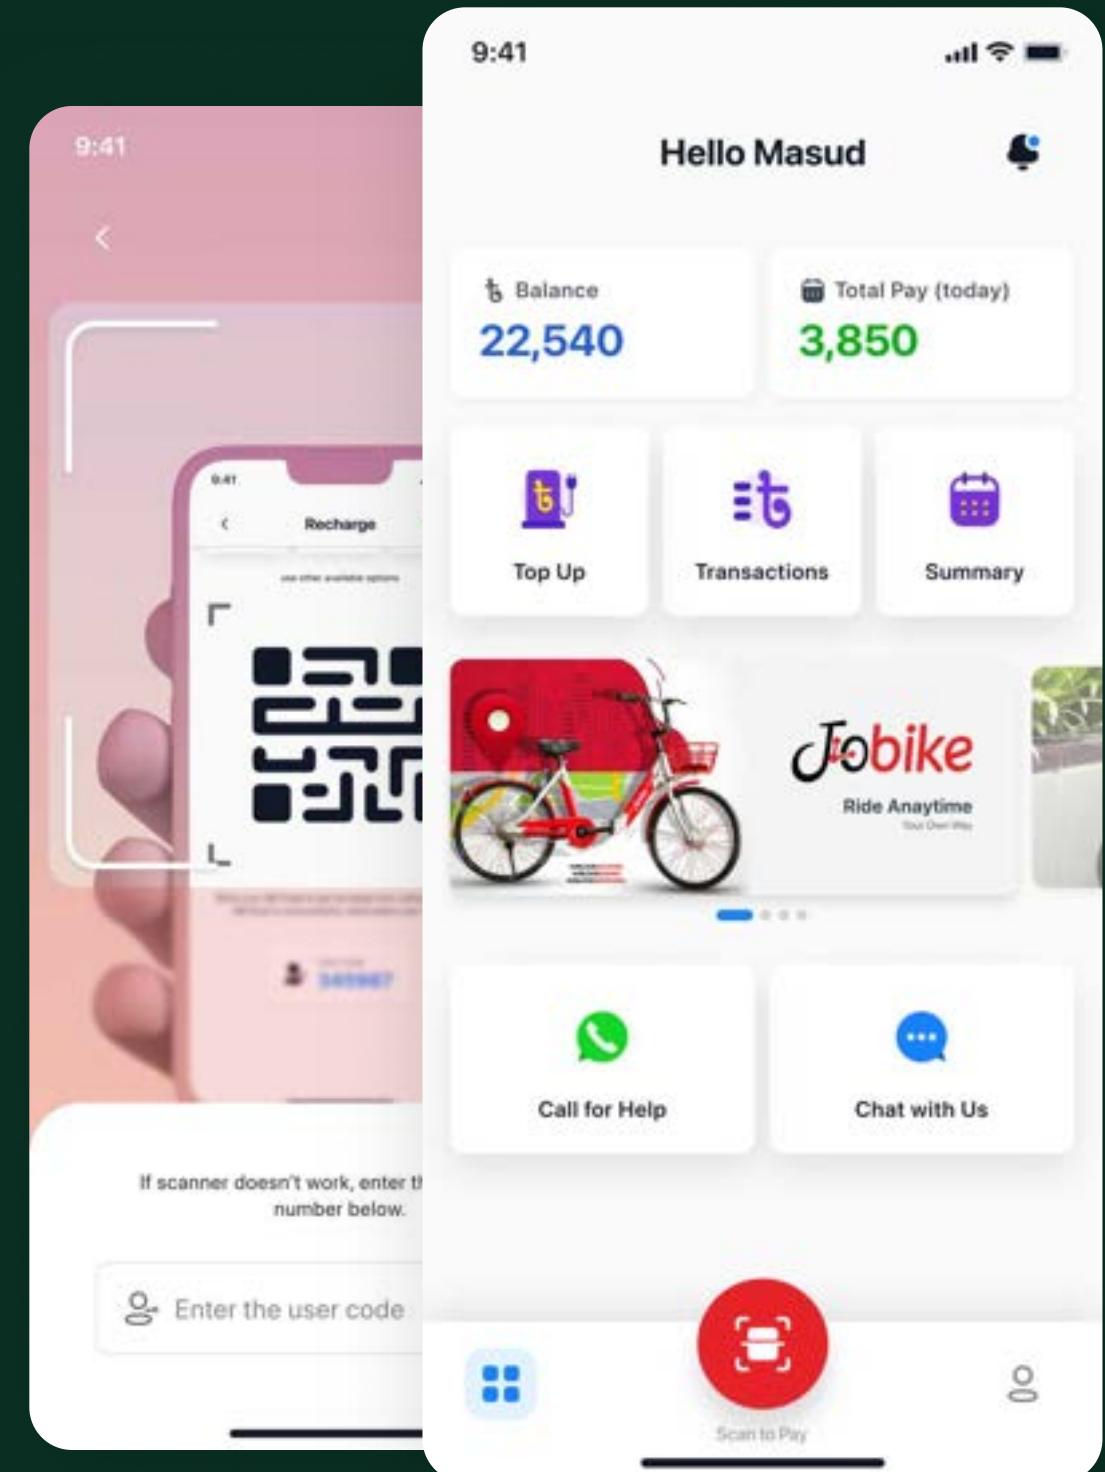

Due to the NDA issue, I've only shared the information authorized by the Jobike authority.

## Refine & Deploy

Based on the usability testing sessions, we refined and updated the design. Then, we created deliverables for development handover. I maintained continuous communication with the developers during the development period.

After the successful deployment, it is time to collect feedback from the user.

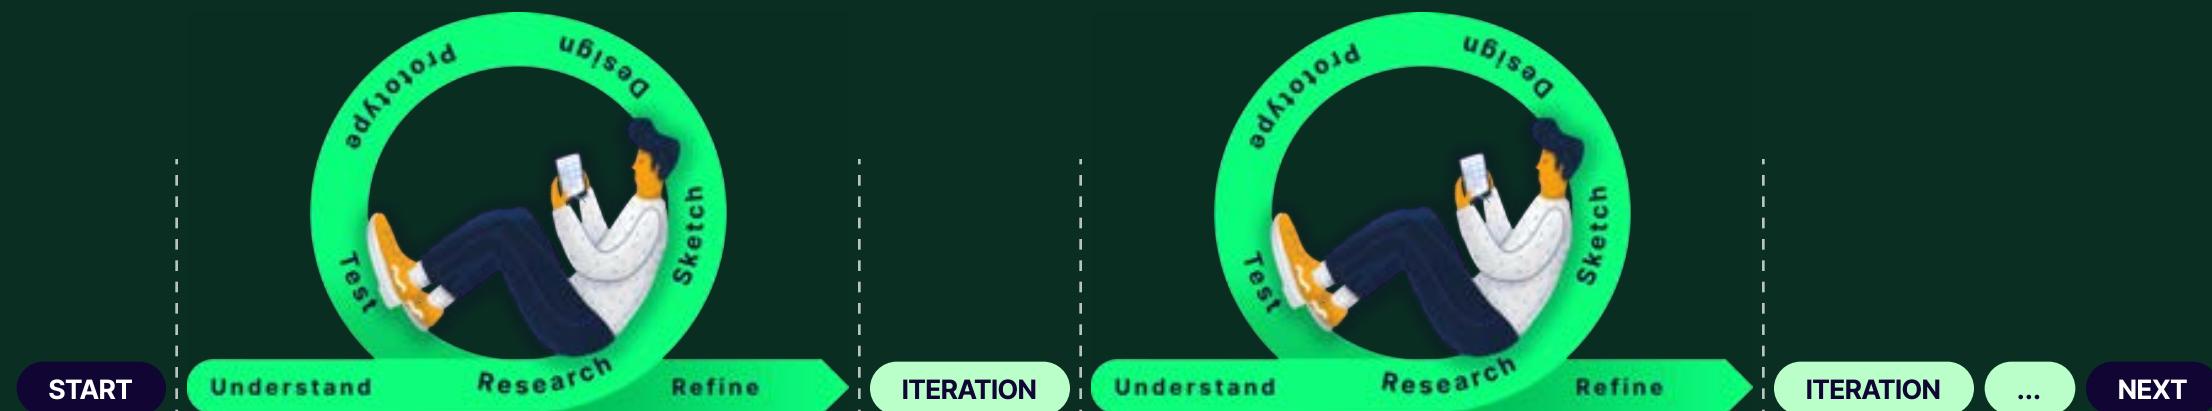

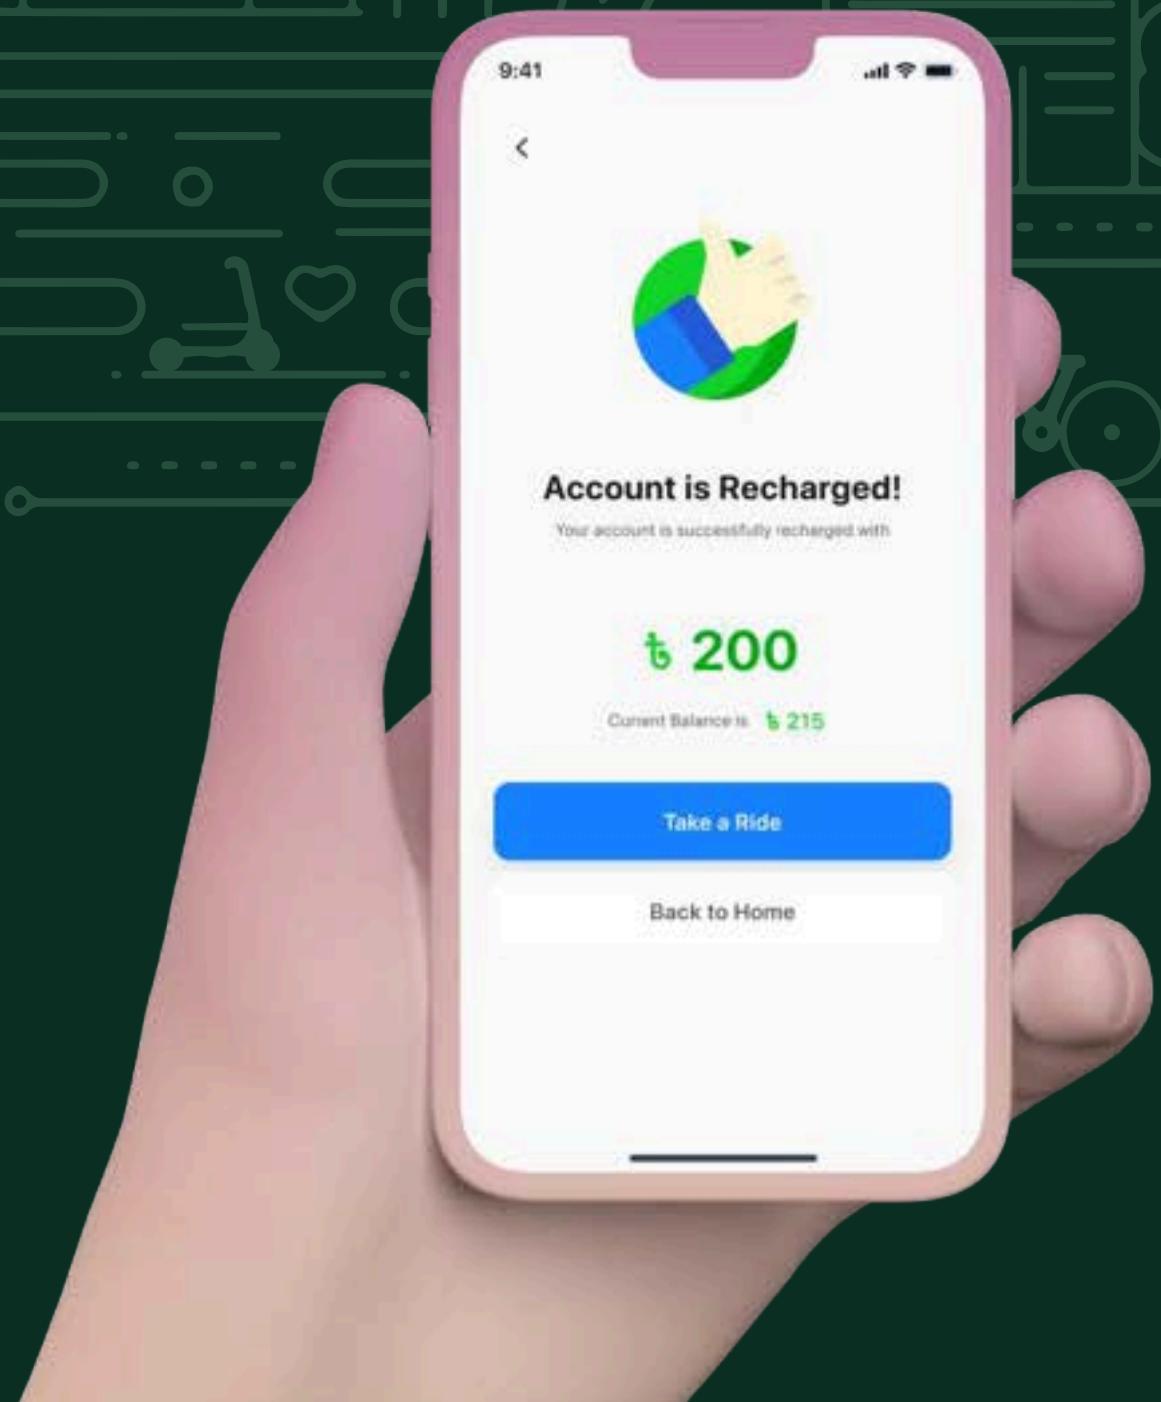

# Results & Future Iteration

After the successful deployment, we collected feedback from user interview sessions. The newly developed features helped us rebuild our users' trust and make our service more efficient. We've monitored and measured the results and within the first 6 month based on our success metrics-

- **Online recharge increased by 65%.** Users don't need to visit JoPoints.
- Although JoPoint recharge decreased, the process is now more efficient. We've secured the users' privacy.

I always prefer to follow the iterative process. And keep repeating the steps.

# Truck Lagbe

**KYS (Know Your Suppliers)  
ID Verification**

# KYS (Know Your Suppliers) ID Verification

Project

TL KYS Programme

Timeline

March 2022 – May 2022

Platform

iOS and Android.

Tools

Figma, FigJam, Notion.

My Role

UX Research, UI/UX Design.

Team Collaboration

Product, Marketing, Sales, Customer Support, and Tech.

## Background

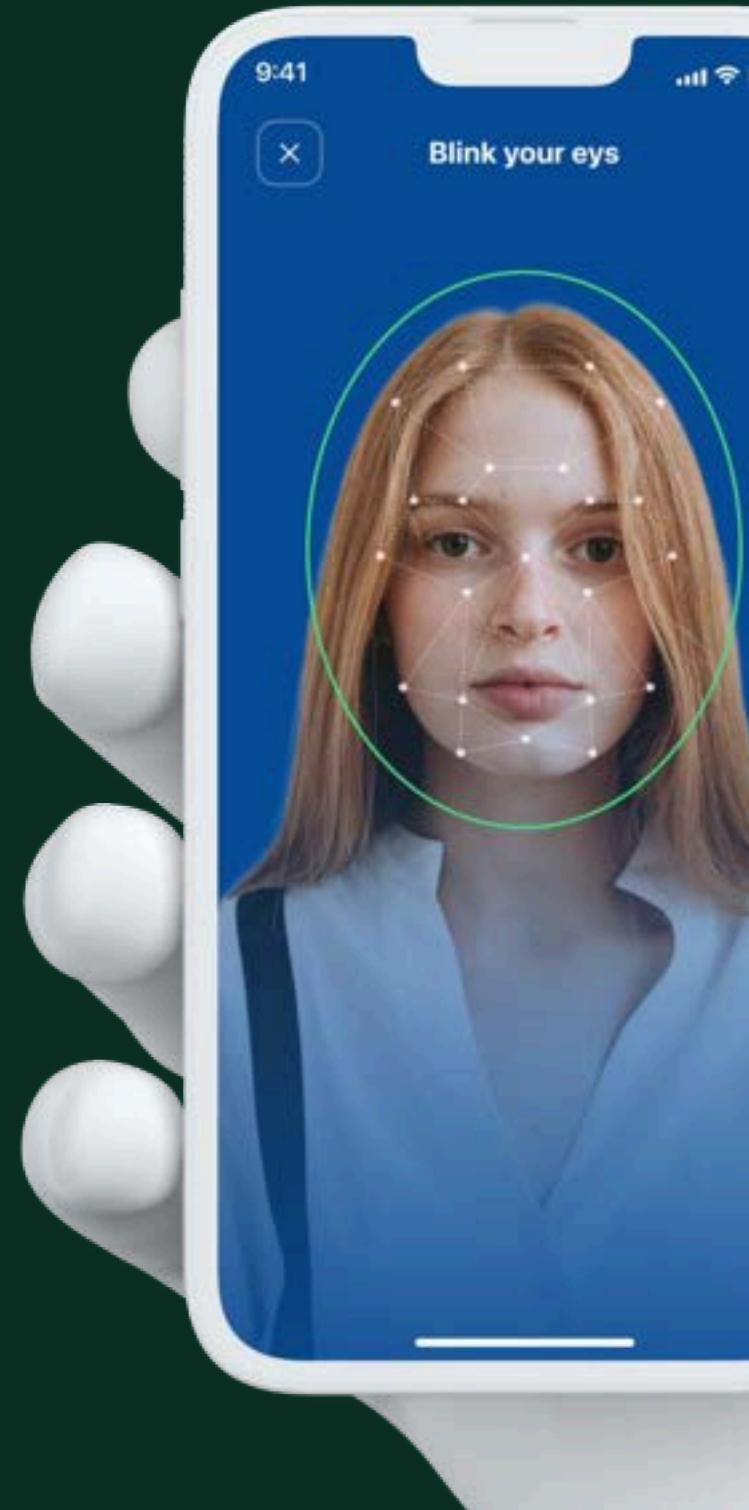

Truck Lagbe was facing operational difficulties verifying their delivery partners (truck owners, truck drivers, collaborators, transport agencies). Also, the trip Completion Rate (CR) is getting more challenging to control and the fraudulent cases are restricting our growth.

## Goal

- Get more supply partners re-verified.
- Make the verification process more efficient, functional and scalable.
- Have more control over fraudulent cases and trip Completion Rate (CR).

## Outcome

- Re-verified around 92% of our existing supply partners.
- The fraudulent cases were reduced to around 30%.
- The trip Completion Rate (CR) increased by 35%.

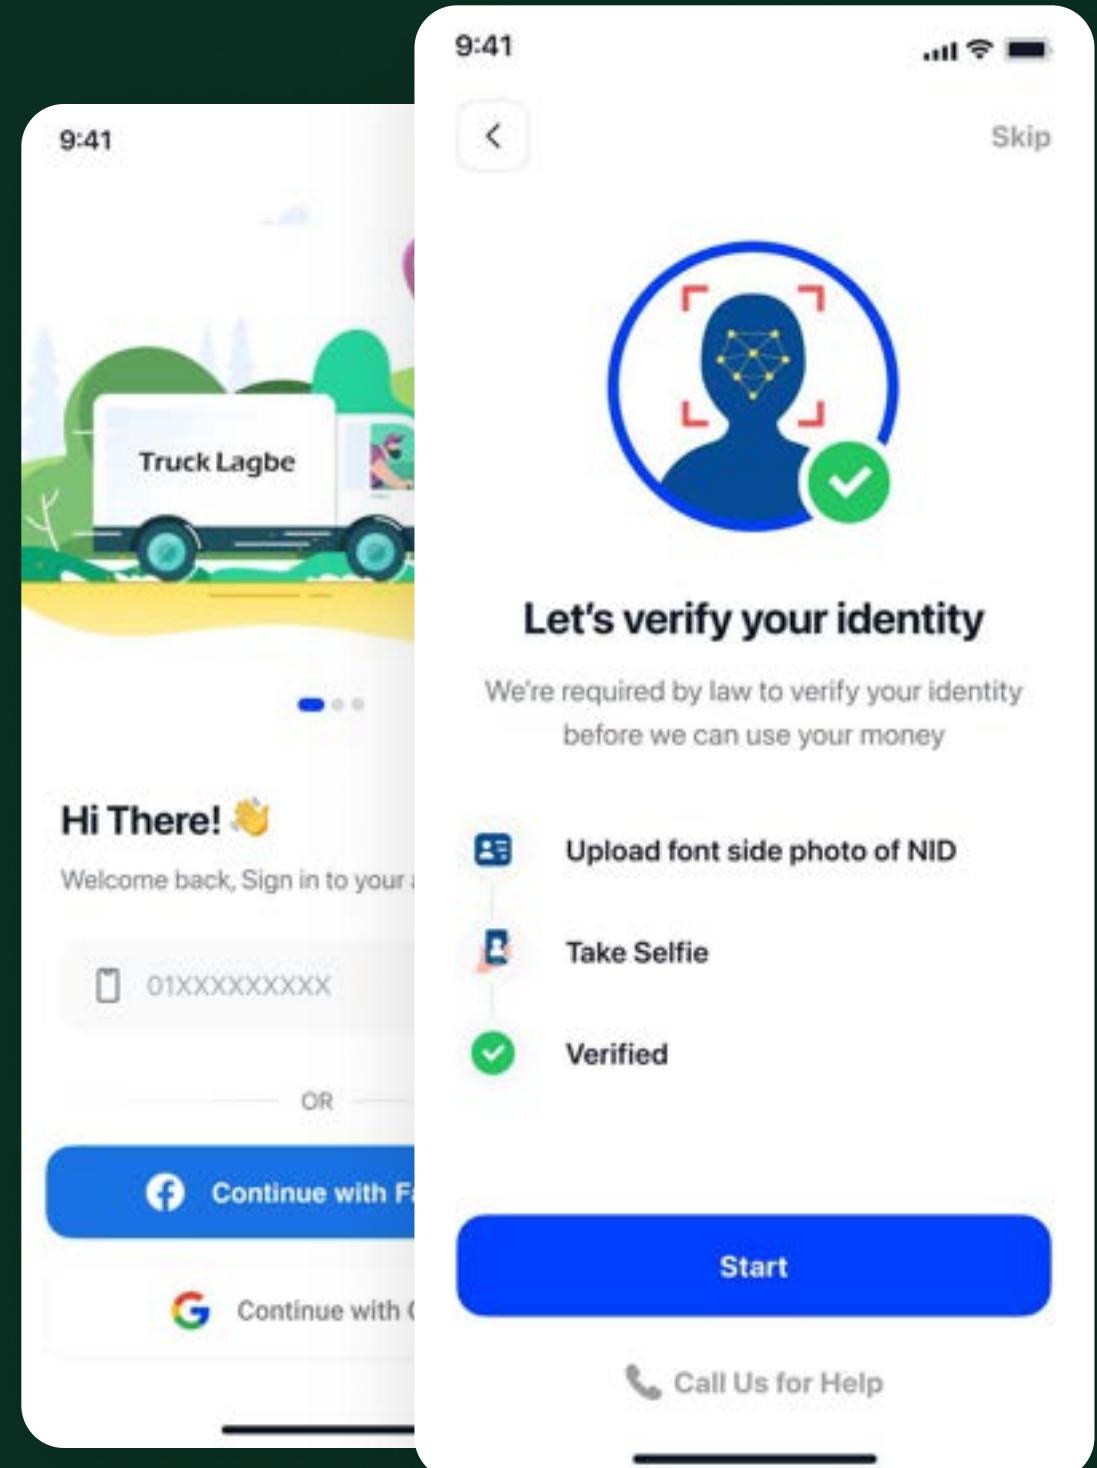

## Design Challenge

Truck Lagbe is always concerned about its customers. To gain their trust and be their moving partner.

- Truck Lagbe faced operational difficulties verifying their delivery partners (truck owners, truck drivers, collaborators, transport agencies).
- It's pervasive in the trucking industry that truck drivers spend most of their time on trips, moving and busy.
- Getting them in optimum places and meeting them personally is also very challenging.
- Also, asking the user to come to TL Services Points can't be a feasible solution, and our wild guess is we'll only get 5-8% of users' information.
- In some cases, users don't have the required document with them.

- Sometimes we get documents from users through courier delivery service. But in that case, we fail to verify the user in person.
- In some cases, users don't have the required document with them. The trip Completion Rate (CR) was getting more challenging to control, and the fraudulent issues restricted our growth.

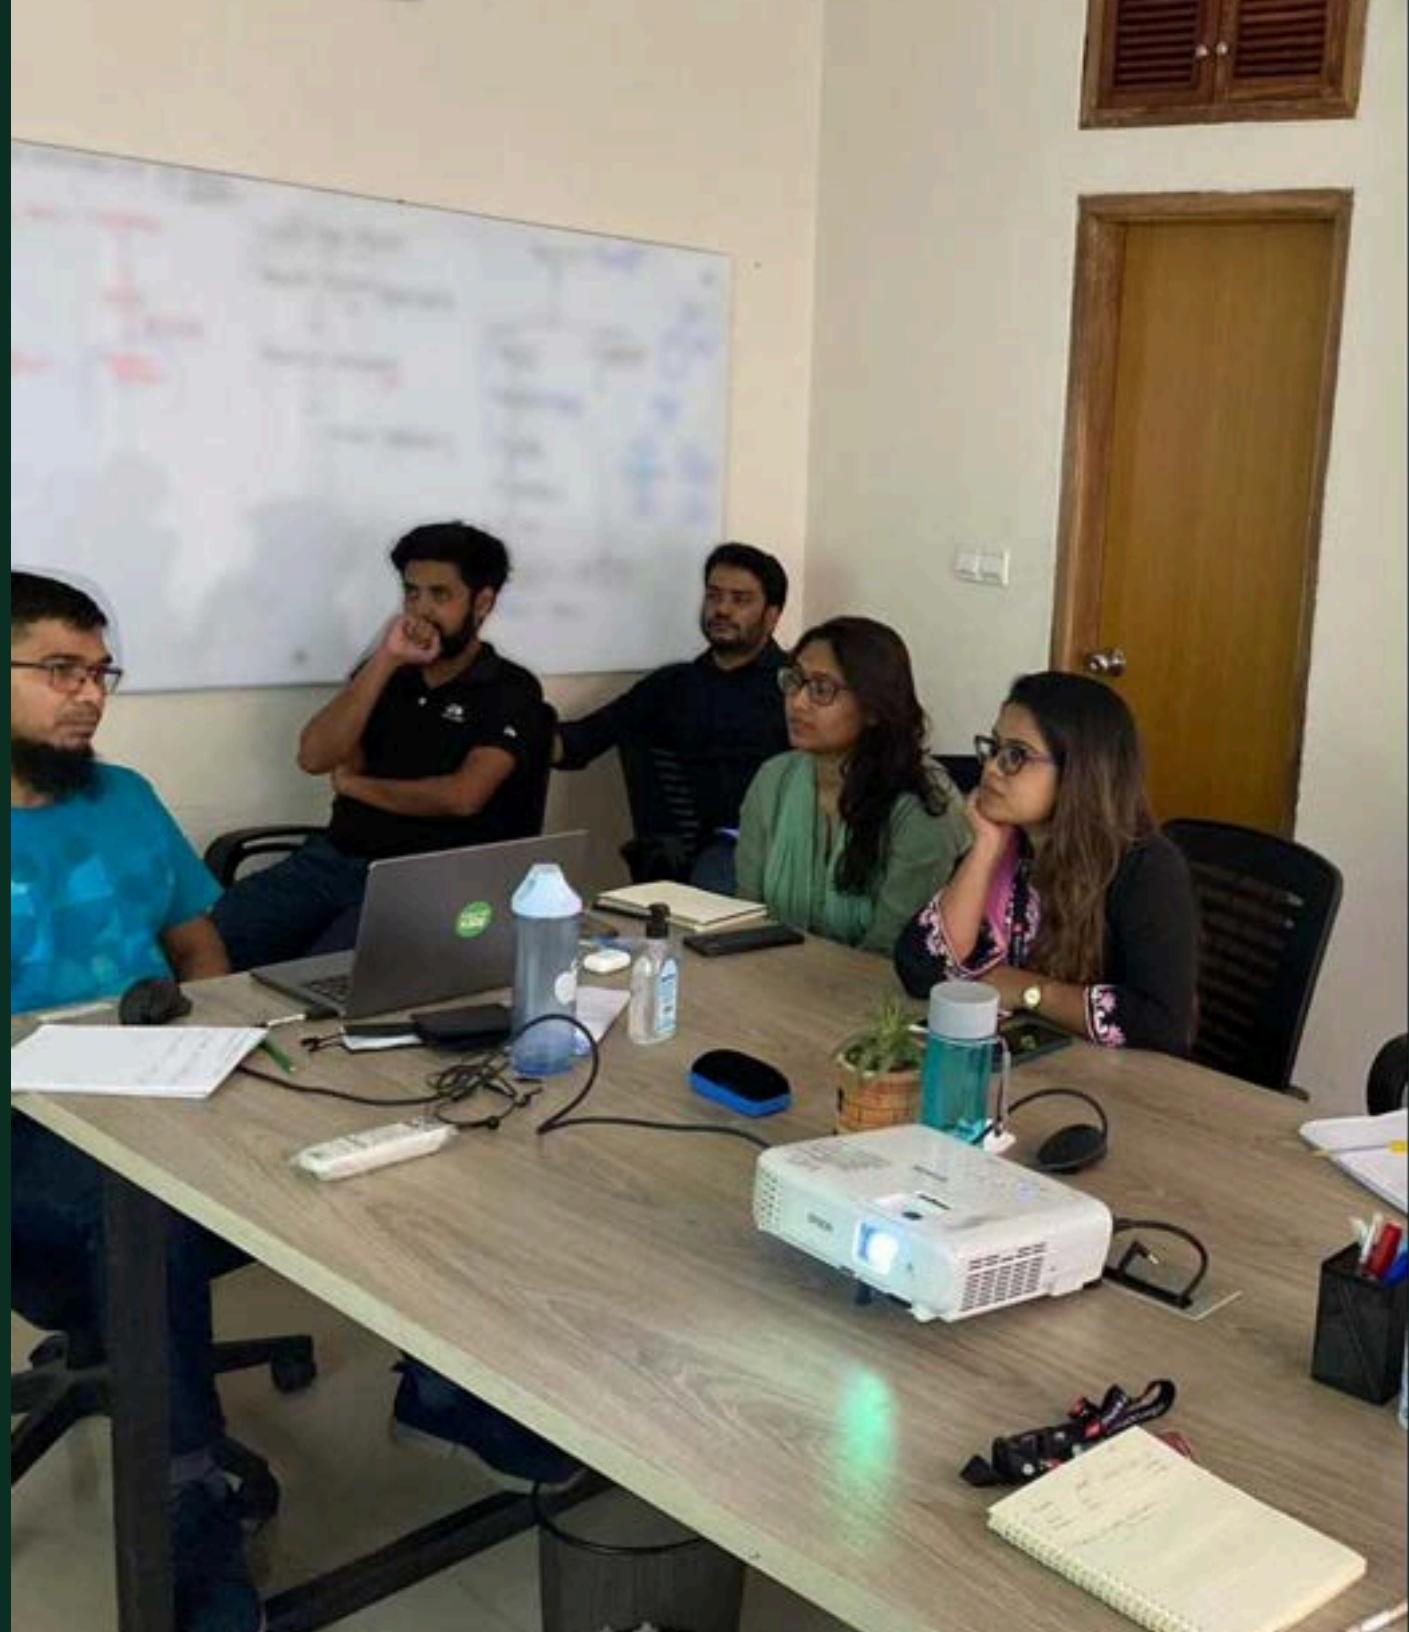

# The Discovery

The discovery phase was a quick, high-intensity effort that allowed us to -

- Define project goals and milestones
- Audit the existing process faults
- Review the existing solutions by other similar products
- Understand business visions
- Empathize the users' needs, behaviors, and pain-points
- Understand technological feasibility and constraints.

Here are three considerations that help me to understand and prioritize the issues.

- How satisfying is the solution for users?
- How well is this solution for users' problem solving and also good for business?
- How challenging would it be to build from the technical feasibilities and limitations?

## The Findings

We visited 10 suppliers. We also had brainstorming discussion sessions with our internal cross-functional team members.

- All the suppliers had a smartphone, and most had button phone.
- 7 users were using bKash or other MFS apps. Most of them are familiar with TikTok, IMO, Facebook, Whatsapp, SHAREit and other related apps.
- They are also familiar with taking selfies, photos, and videos.
- Our technical sessions taught us about OCR (optical character recognition) and WebRTC (real-time communications).
- We also depended on 3rd party API service from Porichoy.com (a government service to verify National ID).

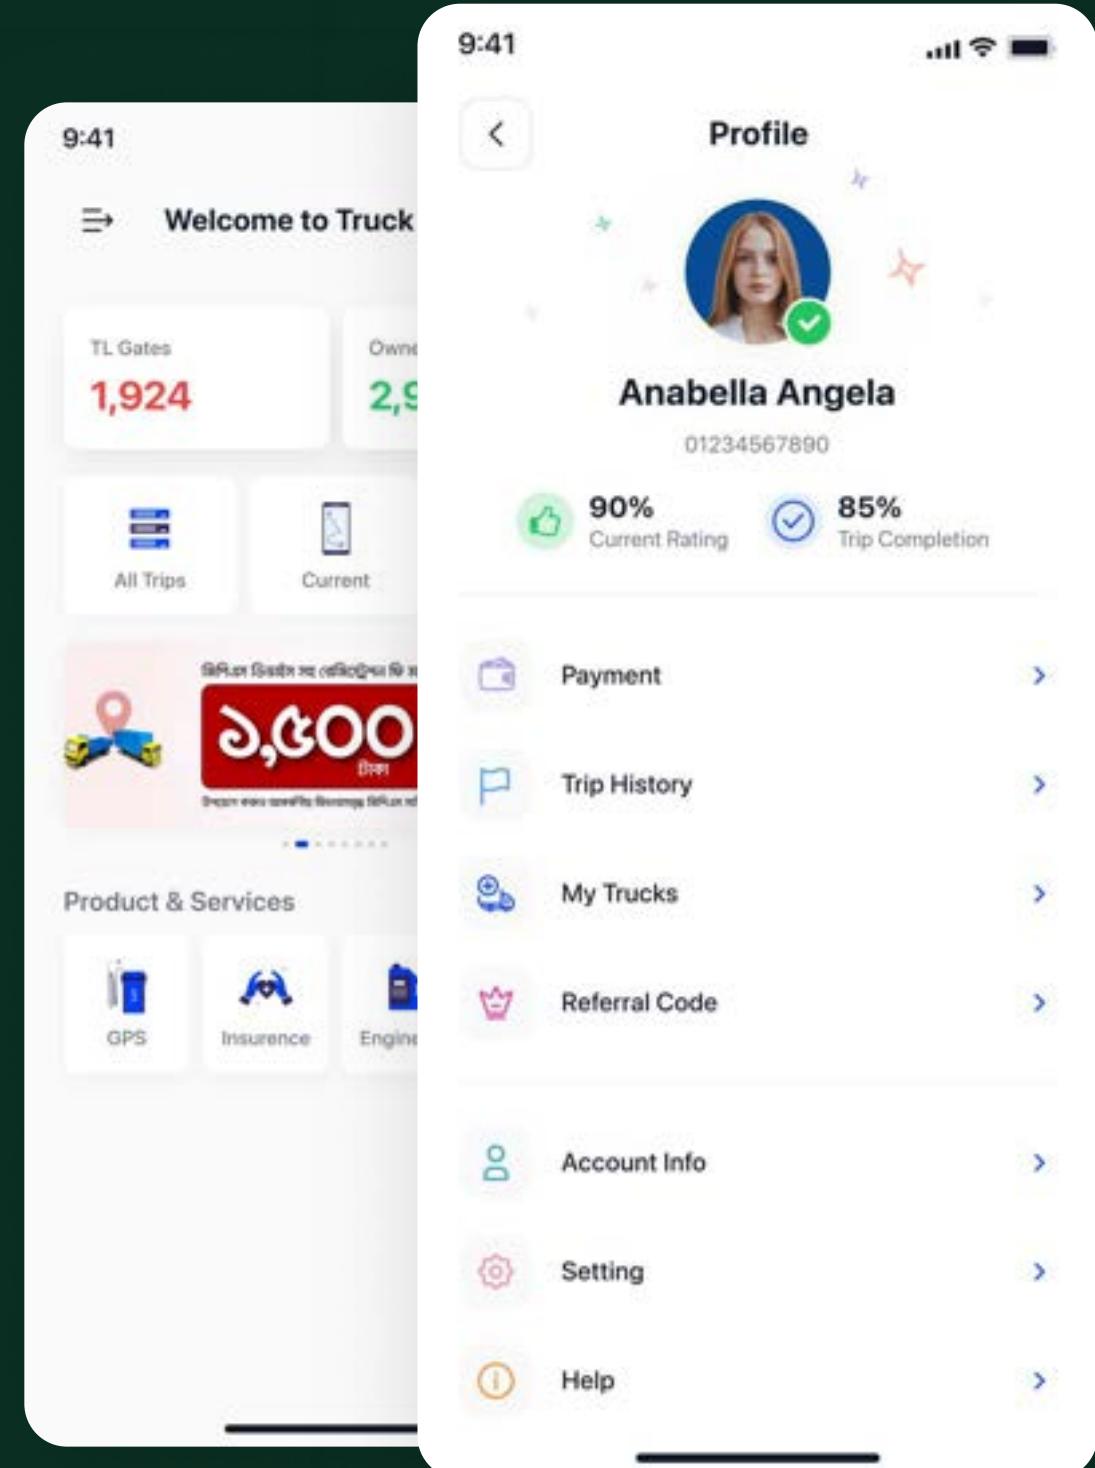

# Approach

Thinking about the future, we wanted to create a system that is simple, easy to use, functional and scalable solution to address the problems. Our goal was to seamlessly display the experience, if necessary, and then guide the user into the flow they originally were in. By collaborating closely as a team, we could provide fallback solutions to our users.

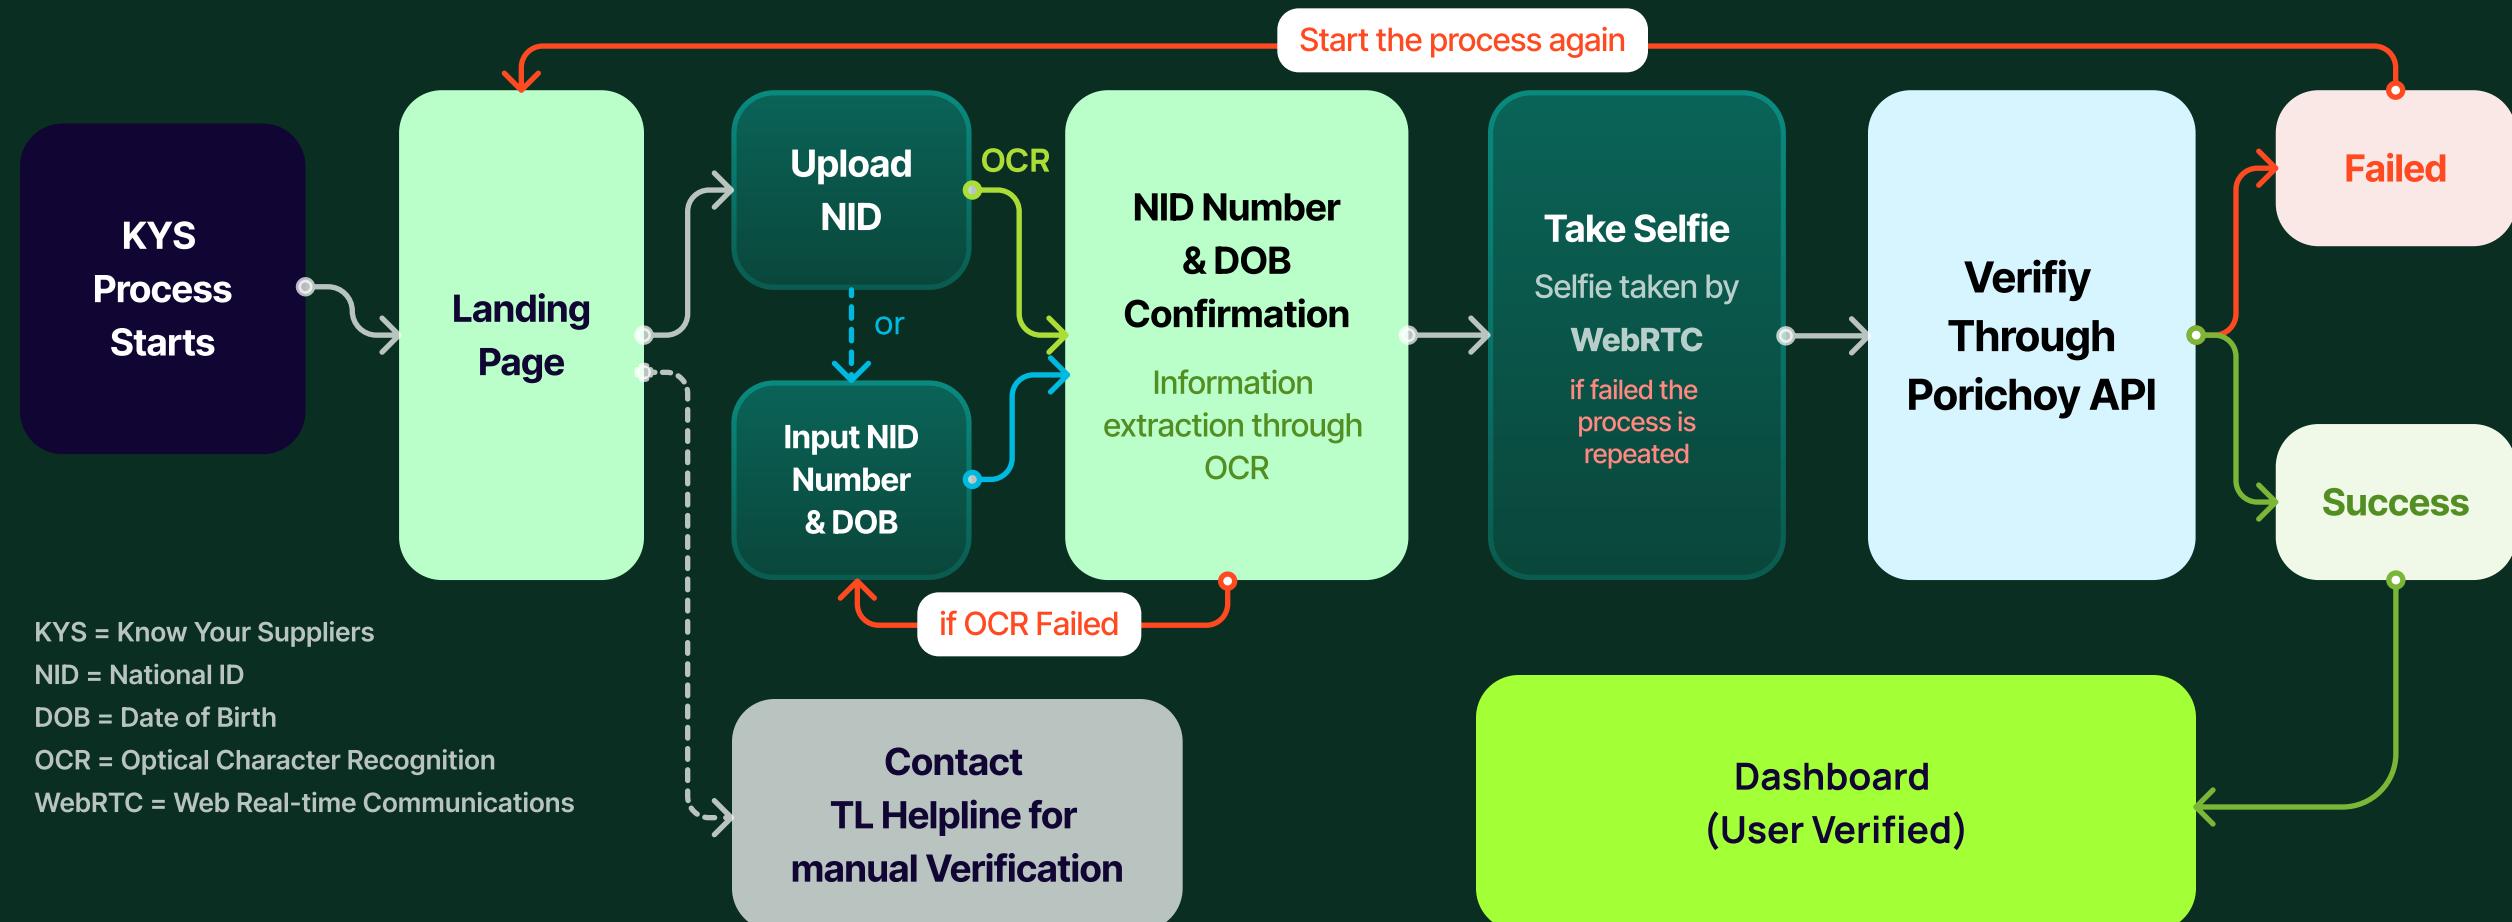

So, Truck Lagbe introduced KYS (Know Your Suppliers) programme. In this programme, Truck Lagbe will comply with its supply partners.

- Ensuring the in-person verification process, we had to implement OCR to collect the data from images and WebRTC to develop video liveness ID verification SDK.
- We also used API service from Porichoy.com (a government service) to verify our National ID.
- It is our concern to keep our customers happy.

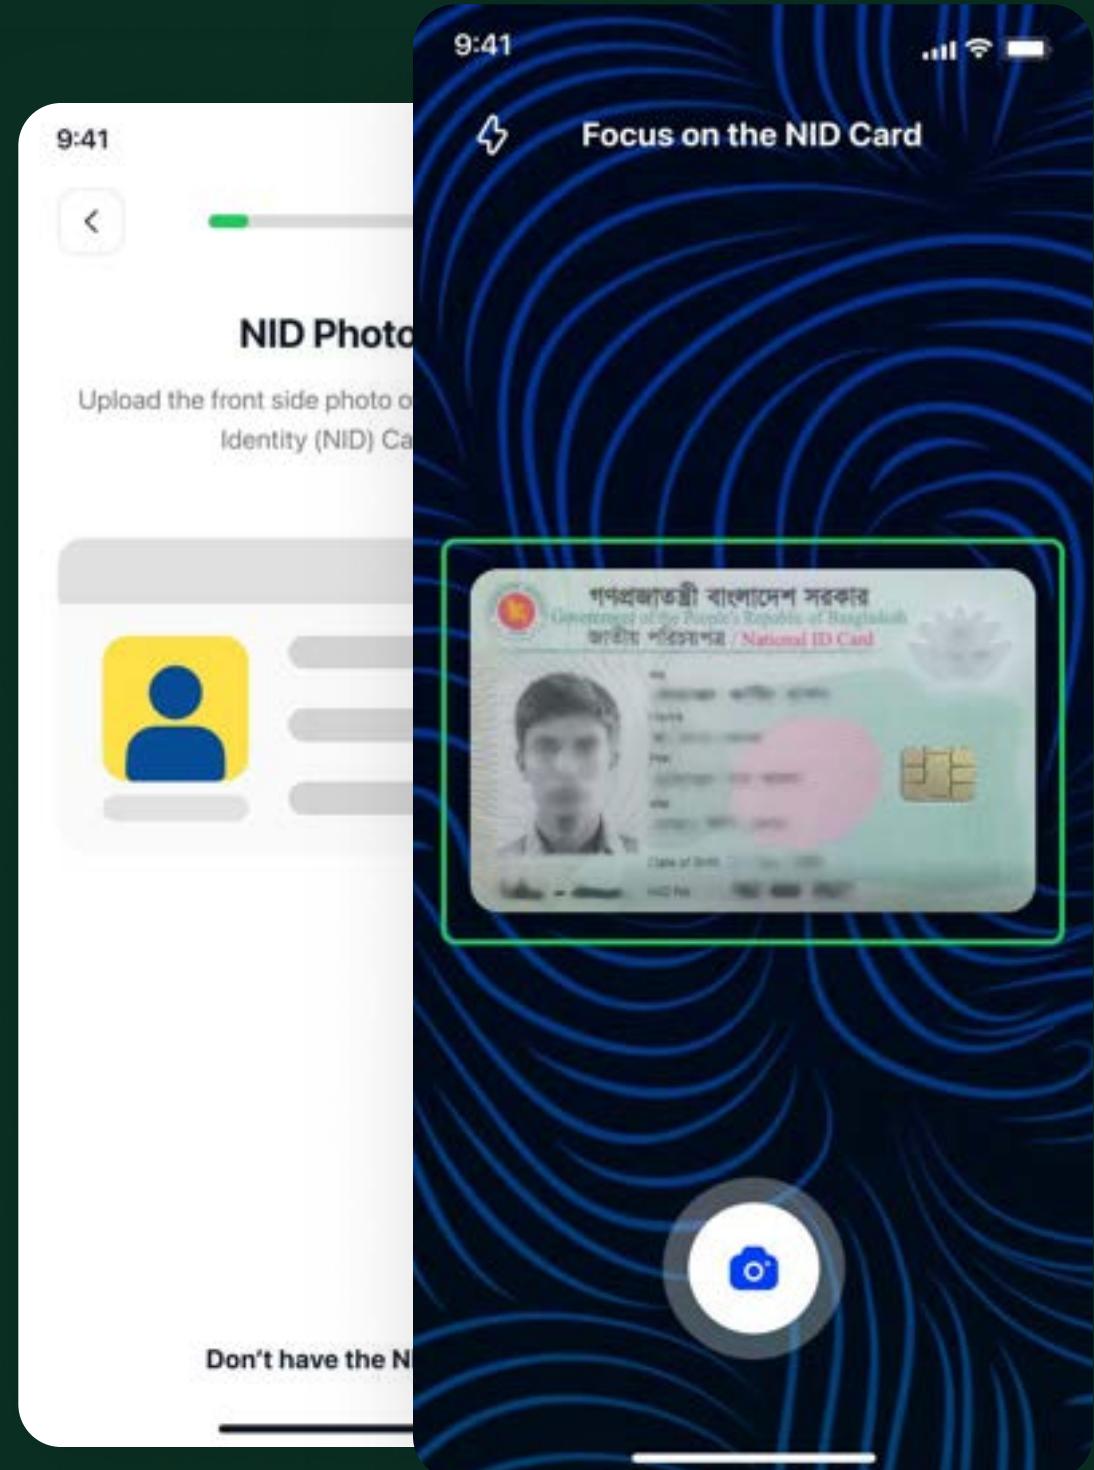

# The KYS Process

We used a 3rd party Bangladesh Government authorised service through out the process.

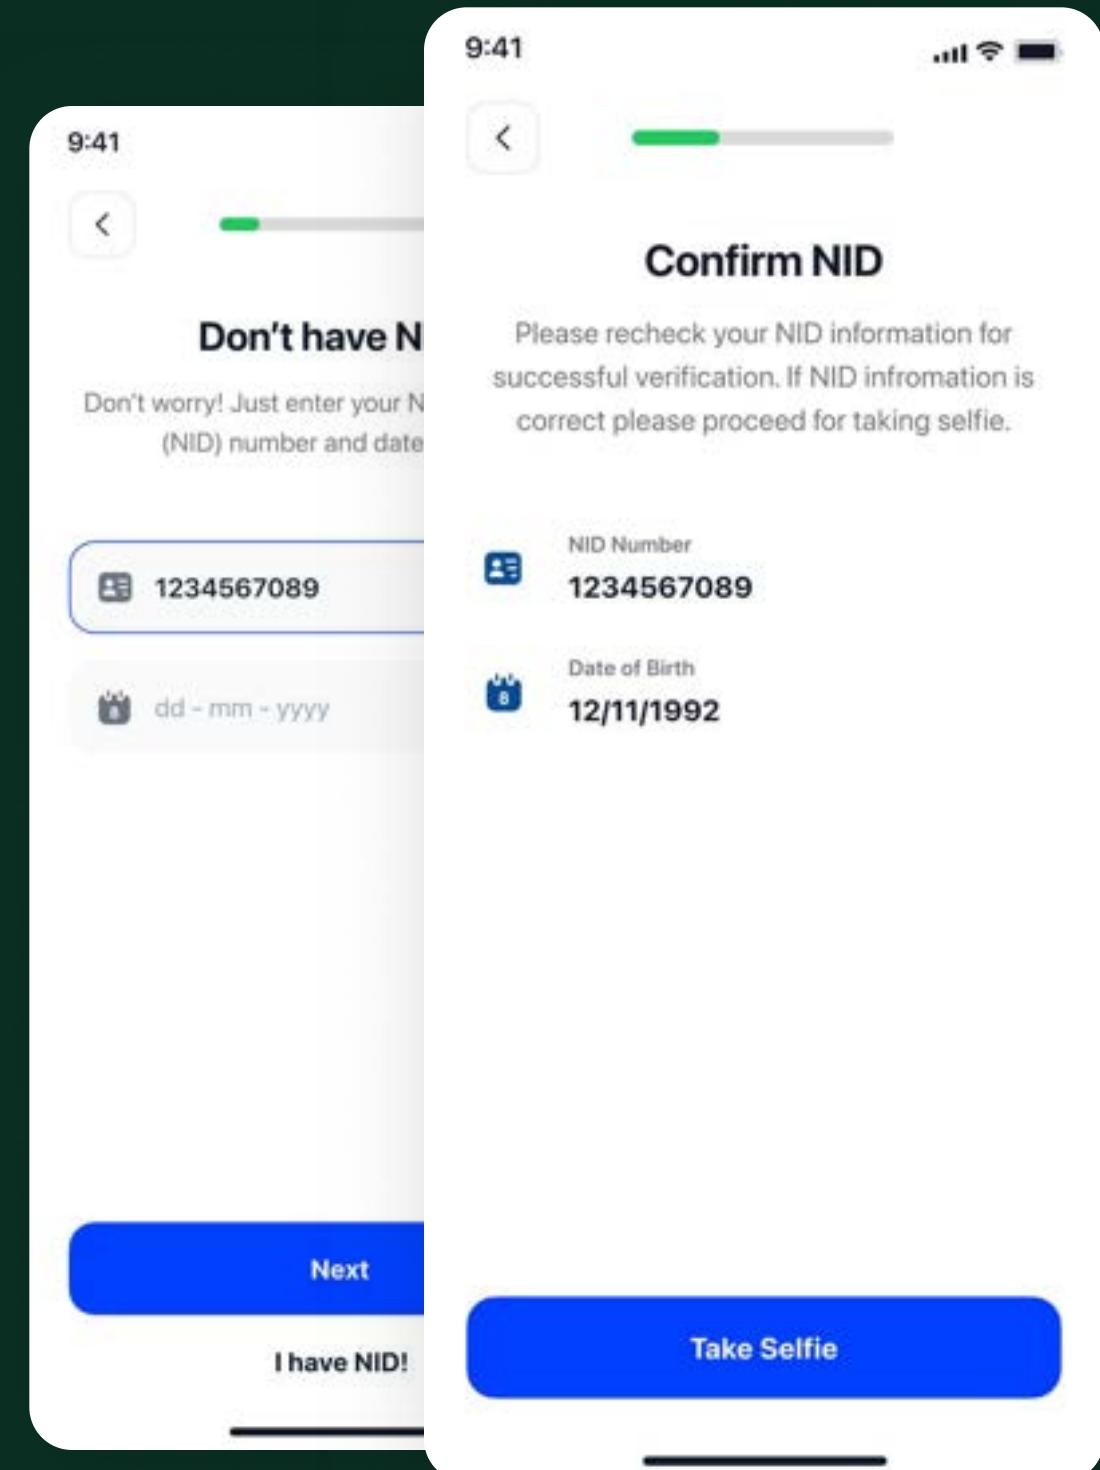

## Method 1: National ID Scan

In collecting and validating a National ID, we asked our users to upload a photo of the NID Front side. We provided an interface for taking a picture, and OCR helped us to collect necessary data from it. Then WebRTC enabled us to capture the selfie and validate the information from Porichoy API. If the NID was valid, the user was verified instantly.

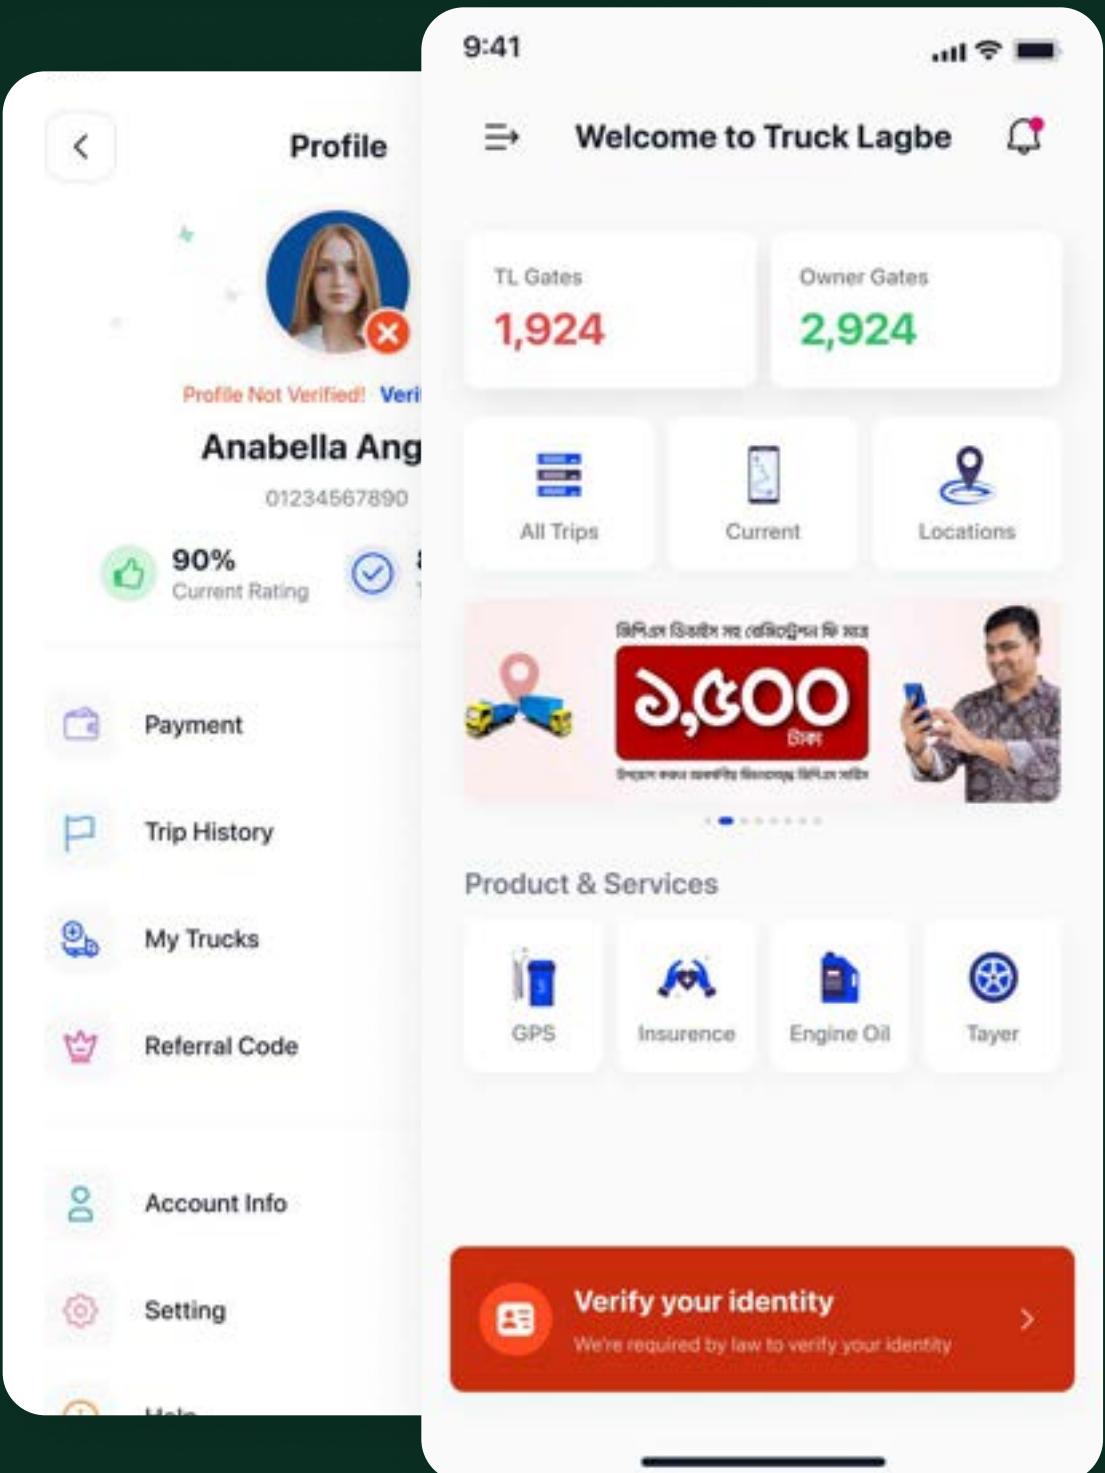

## Method 2: Manual Entry

Sometimes the users don't have the National ID physically. We provided an interface for entering National ID information, and then WebRTC will help them to take the selfie and validate the information from Porichoy API. If the document is the valid user gets verified instantly.

## Method 3: Contact with Support

If the users don't have NID or access to the internet, they can visit TL Points to verify them manually. They can also call our TL Helpline to personalise help.

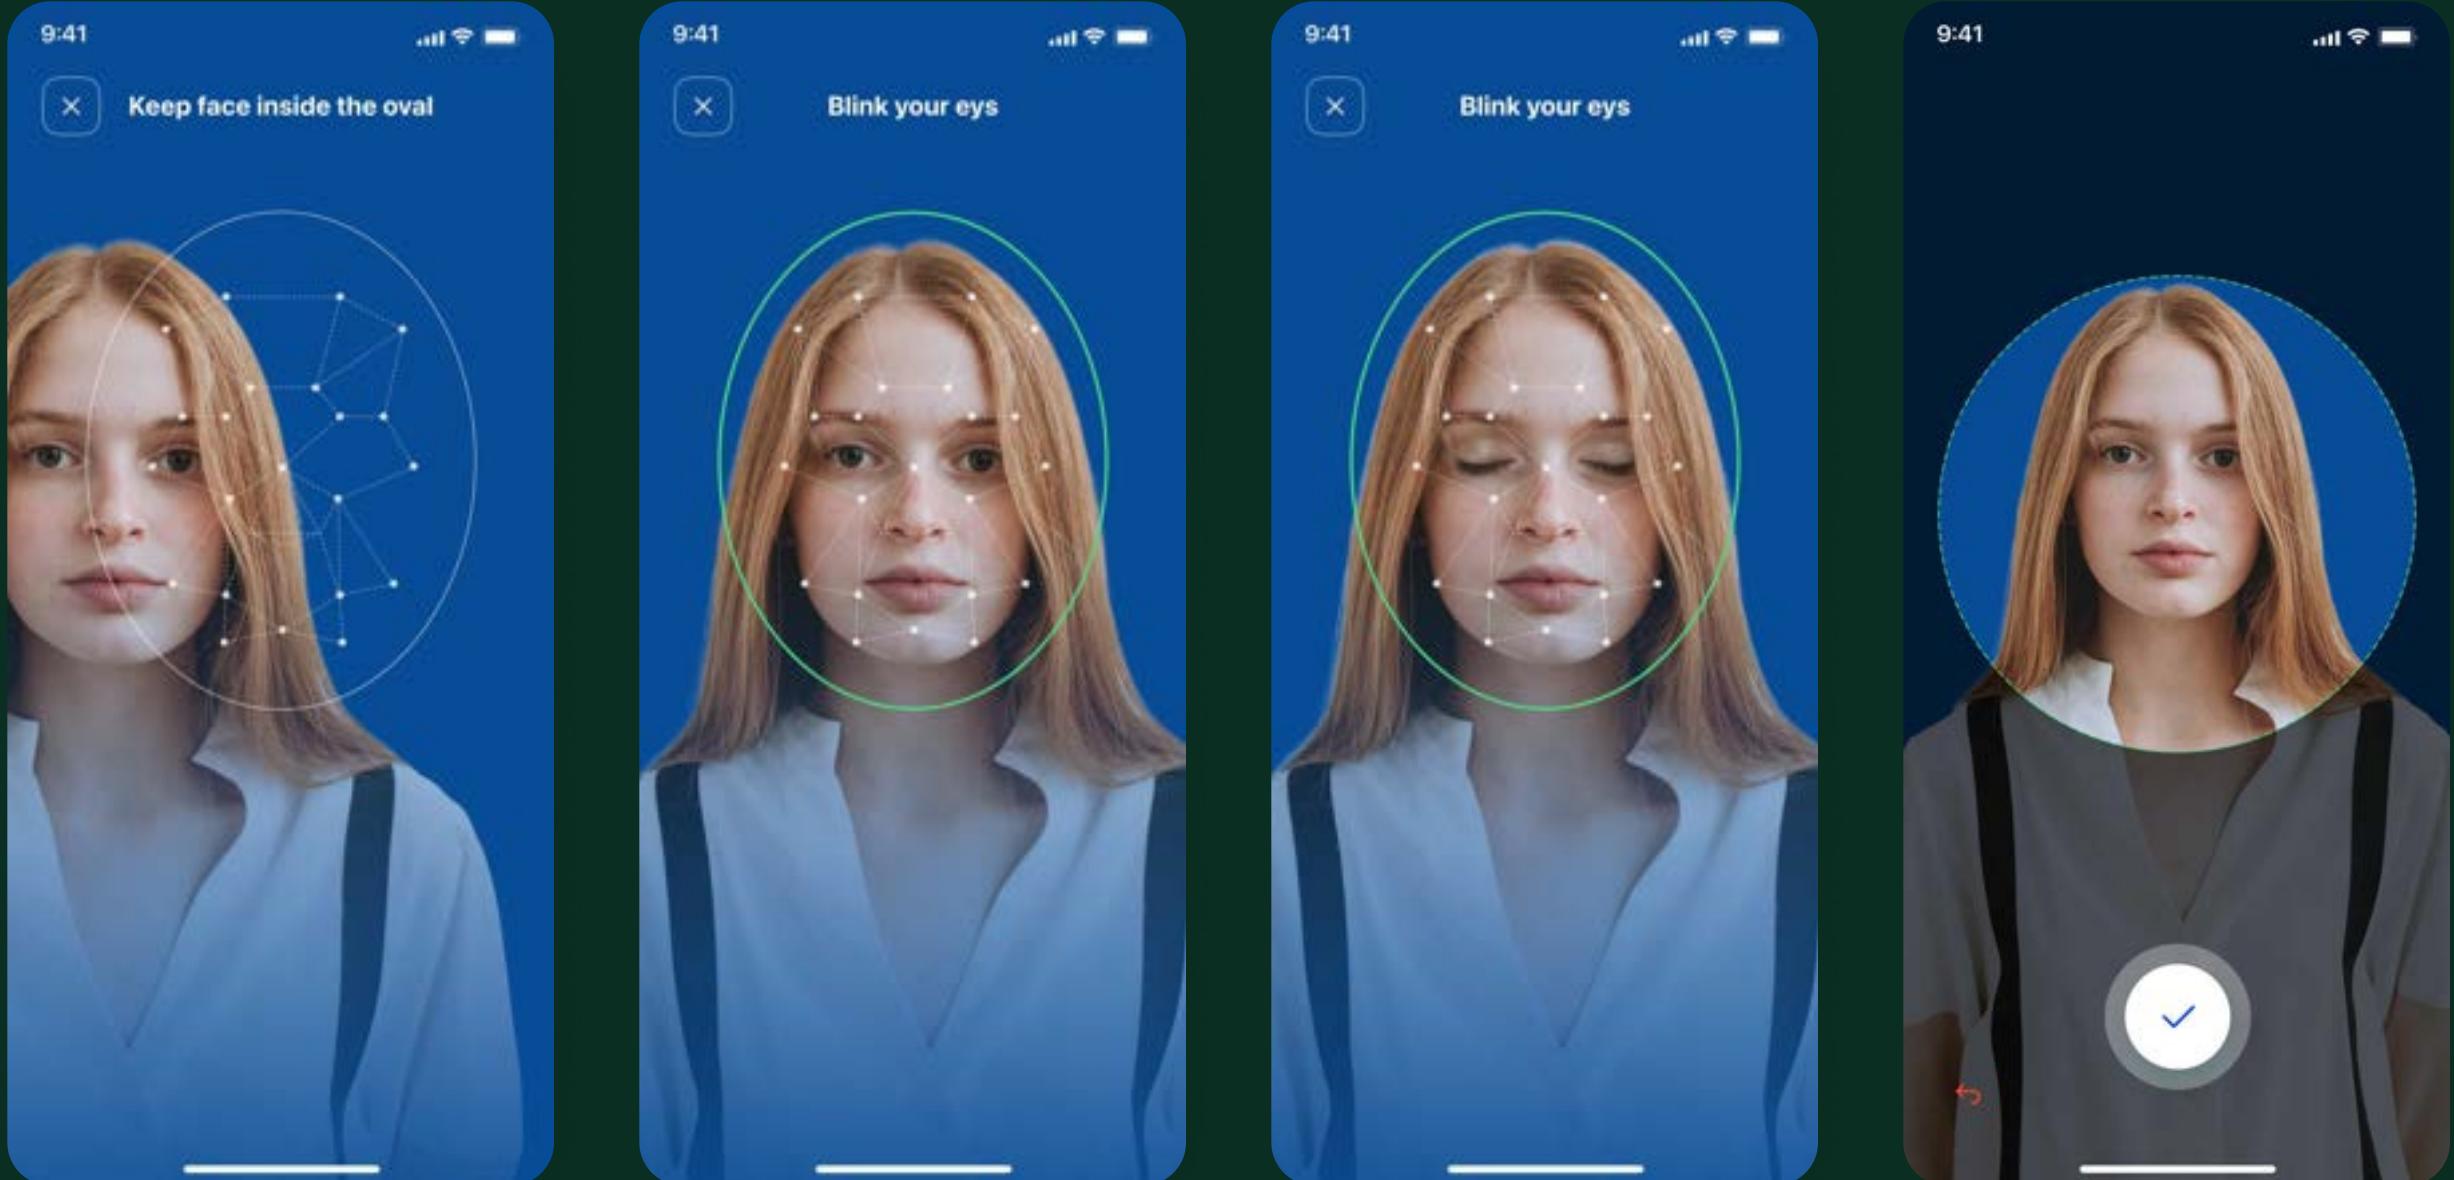

# WebRTC for Taking Selfie

Our first use of WebRTC was designing for a Real-time selfie-capturing feature.

- We removed the ability to upload a selfie and replaced it with a video stream of a device's camera view. We could now get people to capture a selfie from the video stream.
- This feature was starting to get us closer to the native SDK experience, but we still knew we needed to be able to video record the stream to make fraud attempts harder.

# WebRTC for Taking Selfie

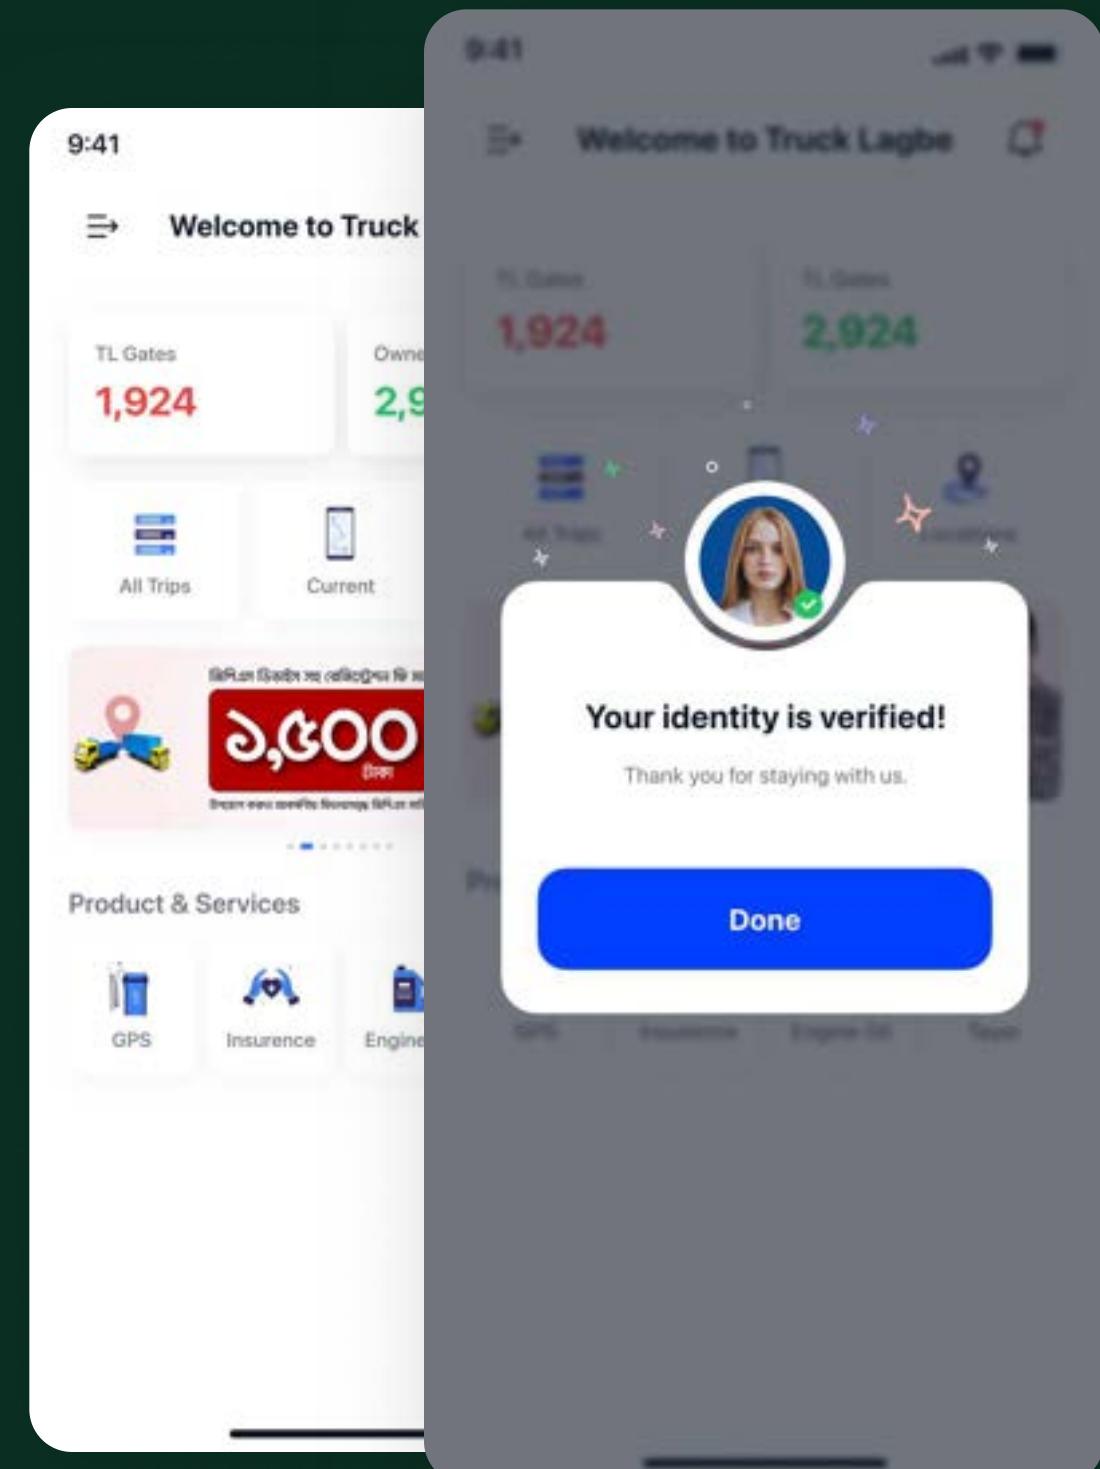

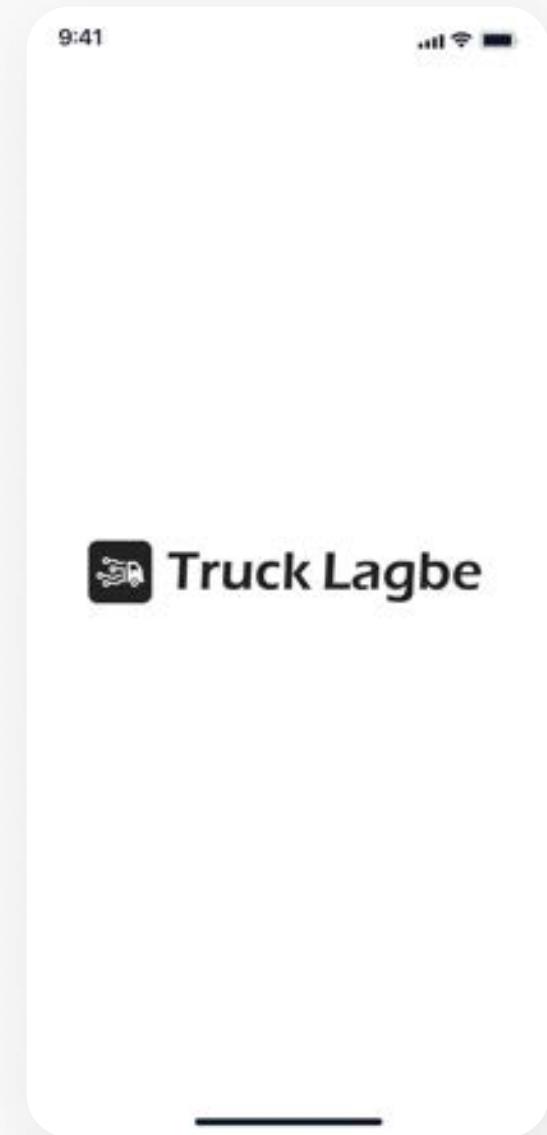

# Impact

## Identity Verified!

After following the KYS process, we have verified our valued supply partners. We followed the compliance rules of the Bangladesh Government. It helps to gain not only our customer's trust but as well as make our service more compliant. It also attracts more investors.

- KYS Programme helps us to **automate the verification process** and make our operations more efficient.
- We've automatically re-verified around **92% of our existing supply partners**.
- The **fraudulent cases** were **reduced to around 30%**.
- The **Trip Completion Rate (CR)** increased by **35%**.

# workd

A Solution for the  
**Job Seekers to Connect with Opportunities**

The screenshot displays the workd mobile application interface. At the top, there is a search bar labeled "search job title or skill". On the right side of the header, there are notification icons and a user profile for "Anamoul".

The main dashboard features several key metrics:

- Profile View (This Month):** 4029 (with a blue line graph showing fluctuations over the month, with a callout for March 14, 2020, at 605 views).
- Potential Jobs (This Month):** 13
- Search Appearance (This Month):** 329 (with a small icon showing search and location)
- Matched Jobs (This Month):** 9
- Applied Job (This Month):** 8

On the right side of the dashboard, there is a section titled "Jobs for you" under "All Jobs", which lists several job opportunities:

- Product Designer at Grameenphone Dhaka, Bangladesh. [View Jobs](#)
- Product Designer at Grameenphone Dhaka, Bangladesh. [View Jobs](#)
- Product Designer at Grameenphone Dhaka, Bangladesh. [View Jobs](#)
- Product Designer at Grameenphone Dhaka, Bangladesh. [View Jobs](#)
- Product Designer at Grameenphone Dhaka, Bangladesh. [View Jobs](#)
- Product Designer at Grameenphone Dhaka, Bangladesh. [View Jobs](#)
- Product Designer at Grameenphone Dhaka, Bangladesh. [View Jobs](#)
- Product Designer at Grameenphone Dhaka, Bangladesh. [View Jobs](#)

At the bottom left, there is a "Invite Friends" section with a "Invite Now" button.

# Design Candidate Panel from Scratch

Project  
**Workd Candidate Panel**

Timeline  
**March 2020 – May 2020**

Platform  
**Web application.**

Tools  
**Figma, FigJam, Notion.**

My Role  
**UX Research, UI/UX Design.**

Team Collaboration  
**Product, Marketing, and Tech.**

## Background

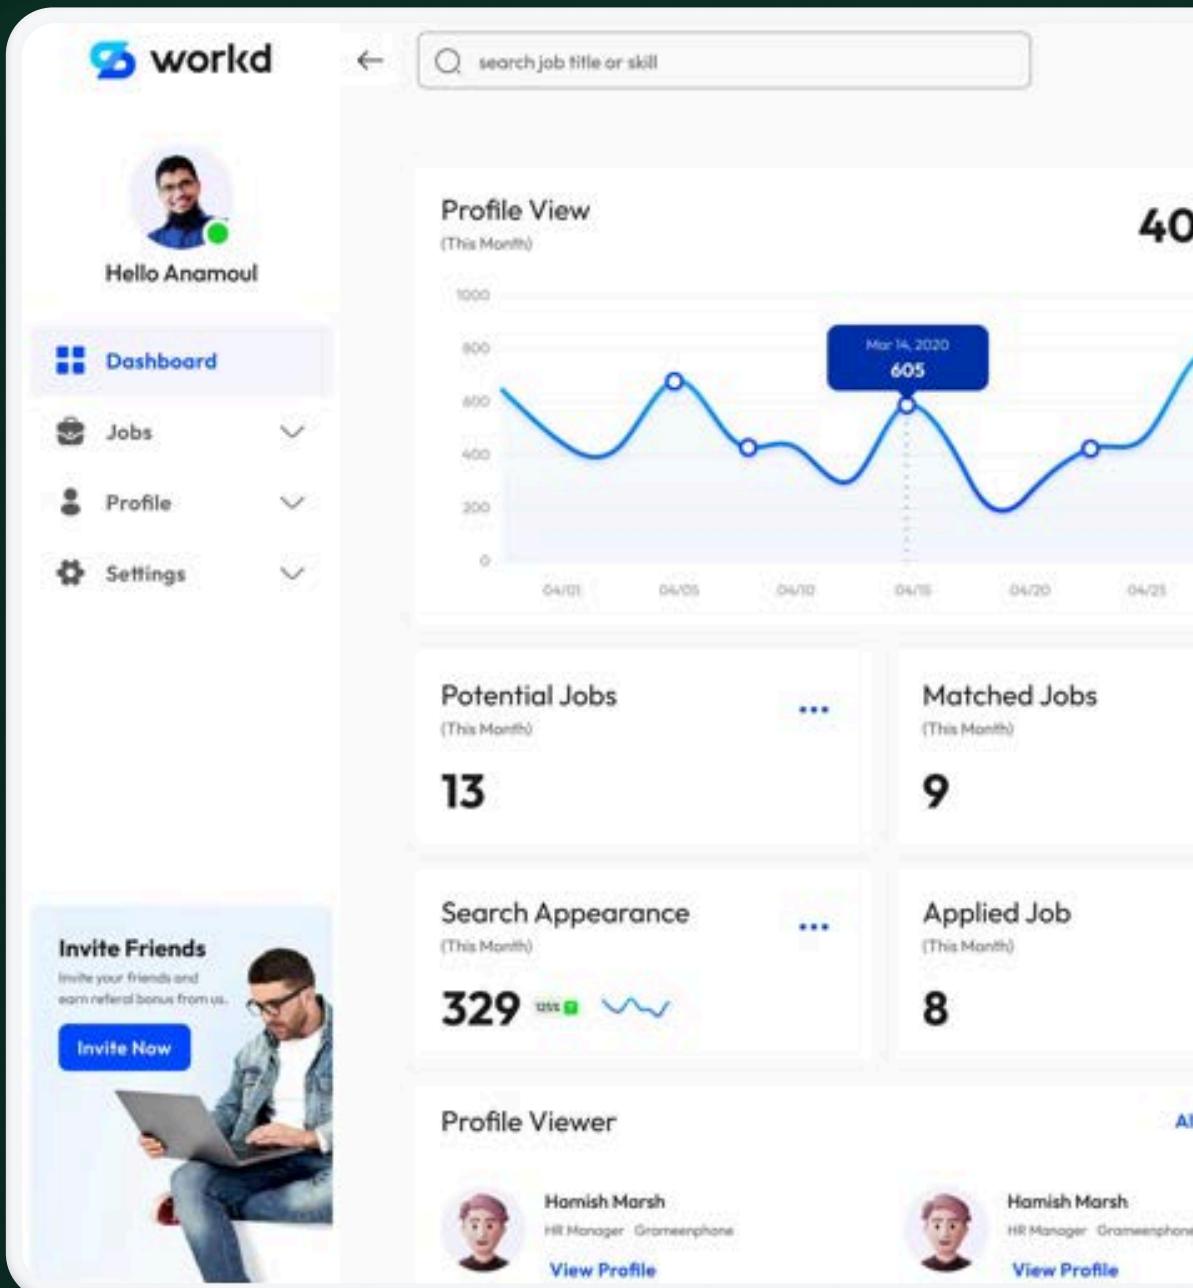

Workd is also a doorway to connecting job seekers with employers. Our main challenge is to design a portal that helps job seekers with career-changing opportunities.

## Goal

- Design a conversion-friendly user flow.
- Get a more efficient, functional, and scalable job application process with more efficient, functional and scalable.

## Outcome

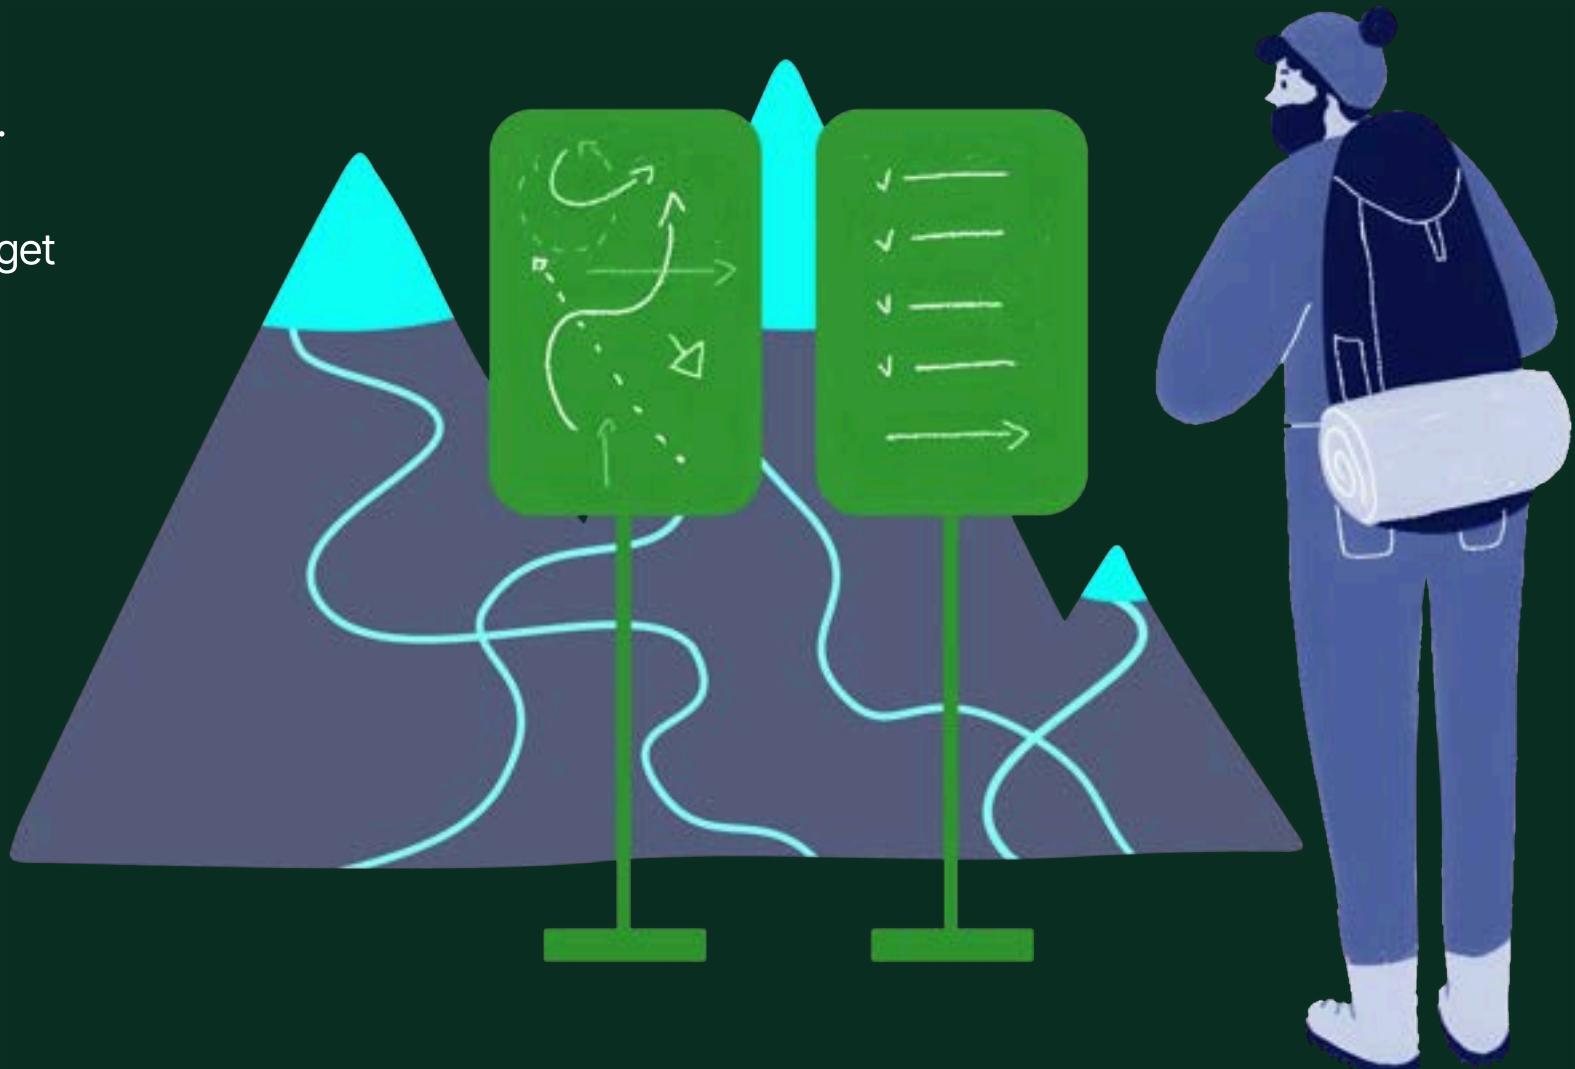

- The number job applications was increased by 45%.
- A job portal with more efficiency and functionality job search experience.

# Design Challenge

Our main challenge was to design a portal for the candidates, where they can explore new opportunities, apply for them, and get hired by the employer.

- It has to be easily used by the non-tech people.
- Candidates can get new relevant job posts notifications.
- Candidates can get connected with the employer.
- Candidates can go through the hiring process and also get hired by the employer.

# The UX Process

When we have minimal time and resources, selecting an efficient, sustainable, and flexible design process is always challenging. I have chosen the approach to the Lean UX process. It is an iterative process with three simple steps.

- Think
- Make
- Check

and keep repeating the steps.

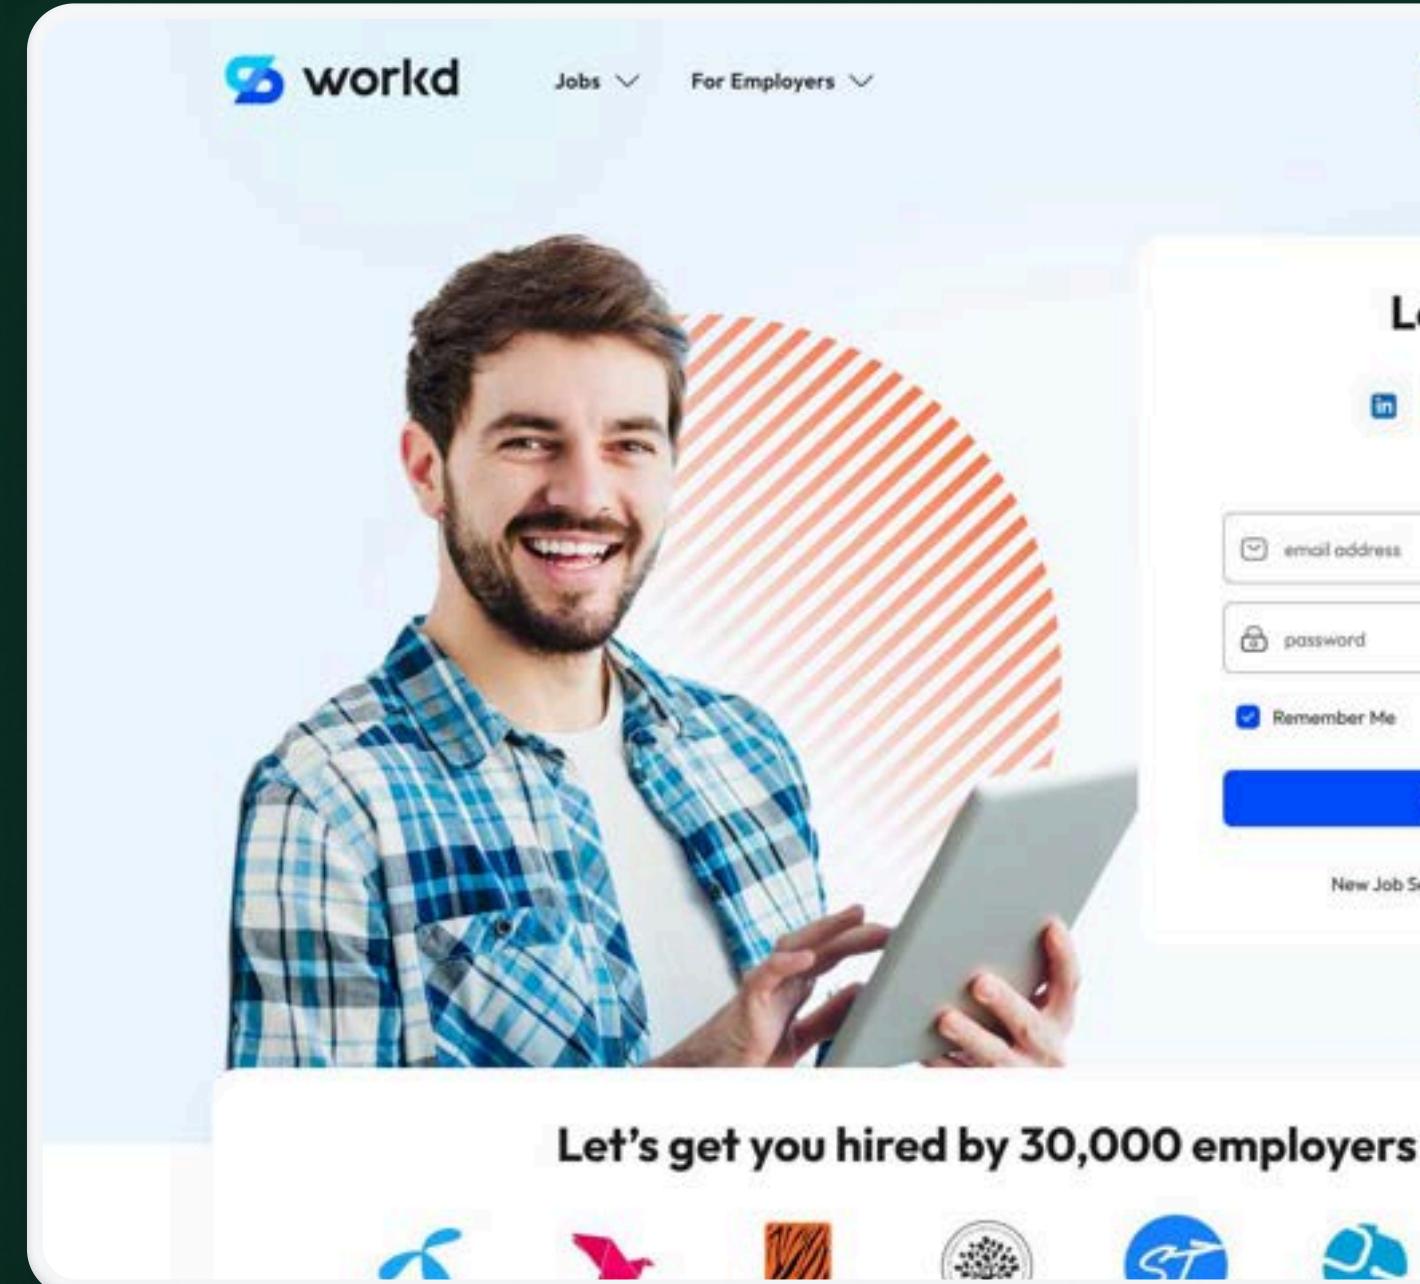

# The Discovery

The discovery phase was a quick, high-intensity effort that allowed us to -

- Define project goals and milestones
- Audit the existing process faults
- Review the existing solutions by other similar products
- Understand business visions
- Empathize the users' needs, behaviors, and pain-points
- Understand technological feasibility and constraints.

Here are three considerations that help me to understand and prioritize the issues.

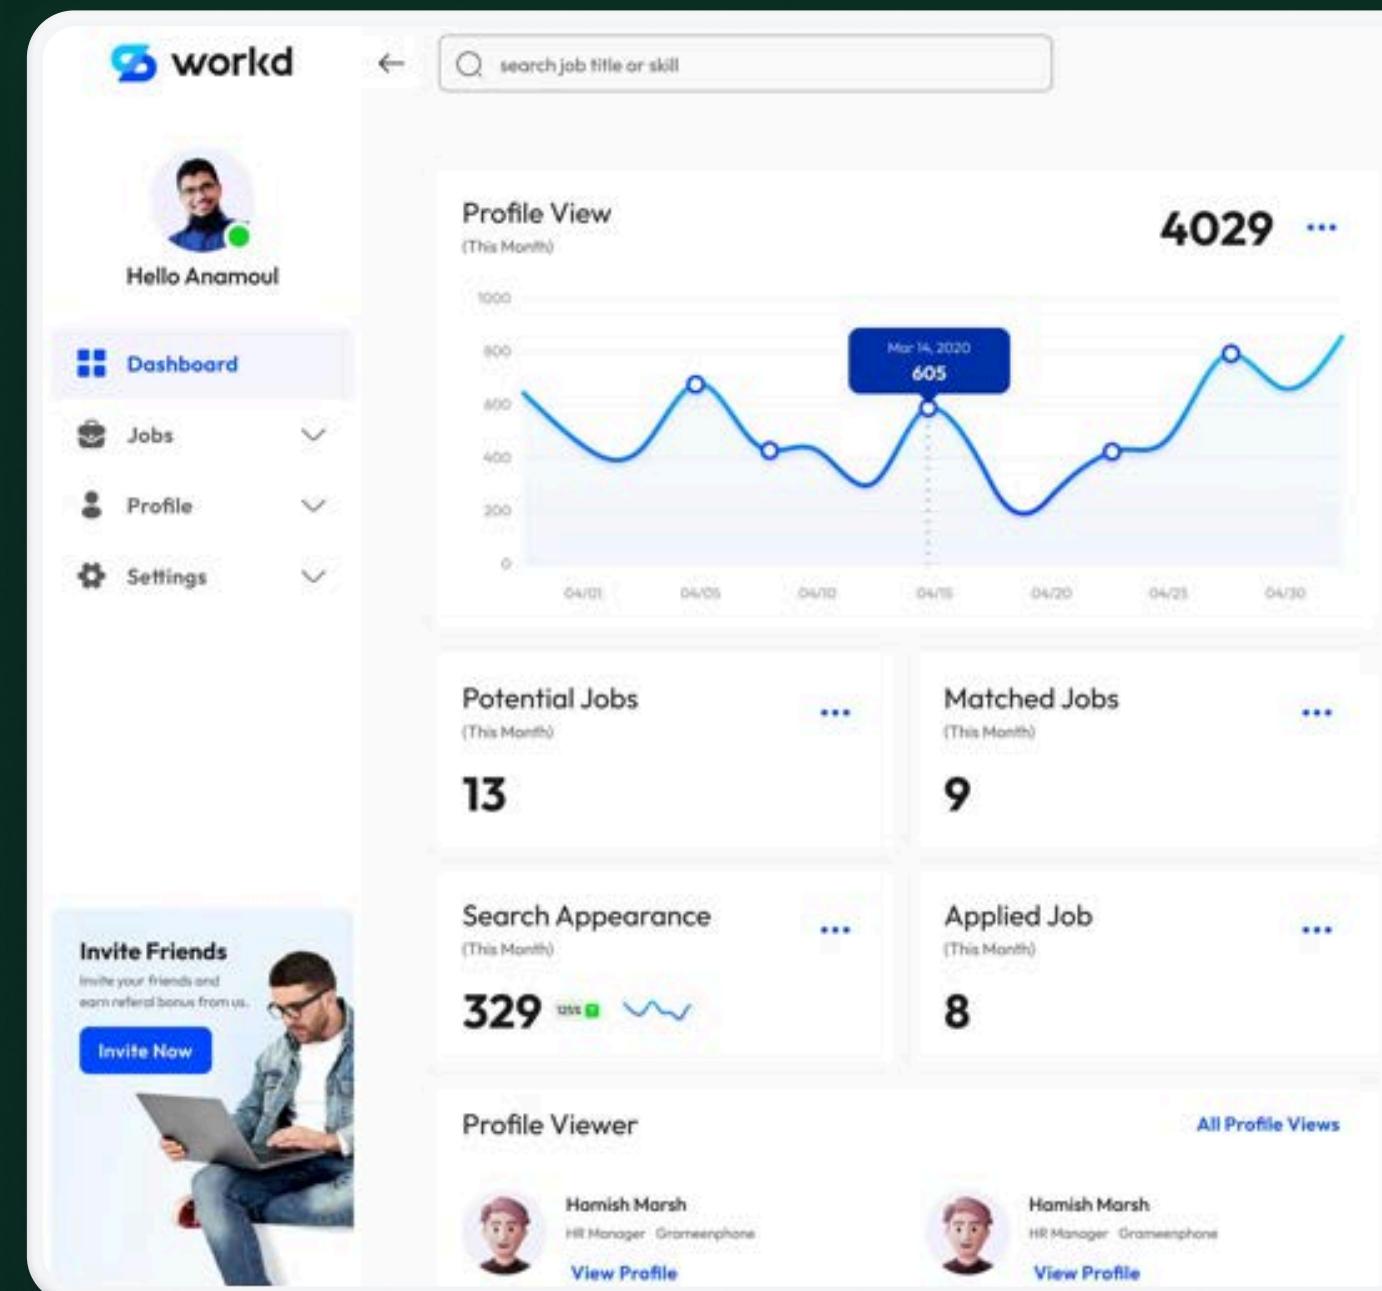

- How satisfying is the solution for users?
- How well is this solution for users' problem solving and also good for business?
- How challenging would it be to build from the technical feasibilities and limitations?

# The Findings

We have sessions with 10 job seekers and 3 employers. We also had brainstorming discussion sessions with our internal cross-functional team members. So what we found-

- The job seekers used different platforms to apply for jobs but 75-80% time they don't get a response.
- It is a hassle to fill up a lot of input fields when applying for a job.
- Uploading relevant attachments is time-consuming and very hassling for low-speed internet connectivity.
- It is hard to reach the hiring team or company and also get informed on the hiring process.
- The employers get the applications from different platforms and 80-85% time they get irrelevant candidates.
- It hassles to sort out and organize the best candidates from a huge number of applicants. Also, automate the hiring process.

# The Competitive Analysis

I analyzed BDJobs, LinkedIn, Glassdoor, Indeed, and other popular hiring platforms. I analyzed their user journey flows, job application process and the hiring process.

The screenshot shows the workd platform interface. At the top, there's a search bar with 'Product Designer' typed in, and various filter options: Date Posted, Job Type, Experience Level, On-Site/Remote, Company, and All Filter. The user profile 'Hello Anamoul' is visible on the left. The main area displays a list of 'Jobs in Dhaka' (600 results) and a detailed view of a specific 'Product Designer' job at Grameenphone in Dhaka, Bangladesh. The job listing includes an 'Apply' button, a 'Save Job' button, and a message from 'Hamish Marsh' (Hr Manager at Grameenphone). Below the job listing, there are sections for 'Responsibilities' and 'Qualifications and Skills', each containing a bulleted list of requirements. The sidebar on the left also lists 'Dashboard', 'Jobs' (selected), 'All Jobs', 'Job For Me', 'My Jobs', 'Profile', and 'Settings'.

Product Designer  
Grameenphone Dhaka, Bangladesh  
Posted on 15 May 20 - Expire on 30 May 20

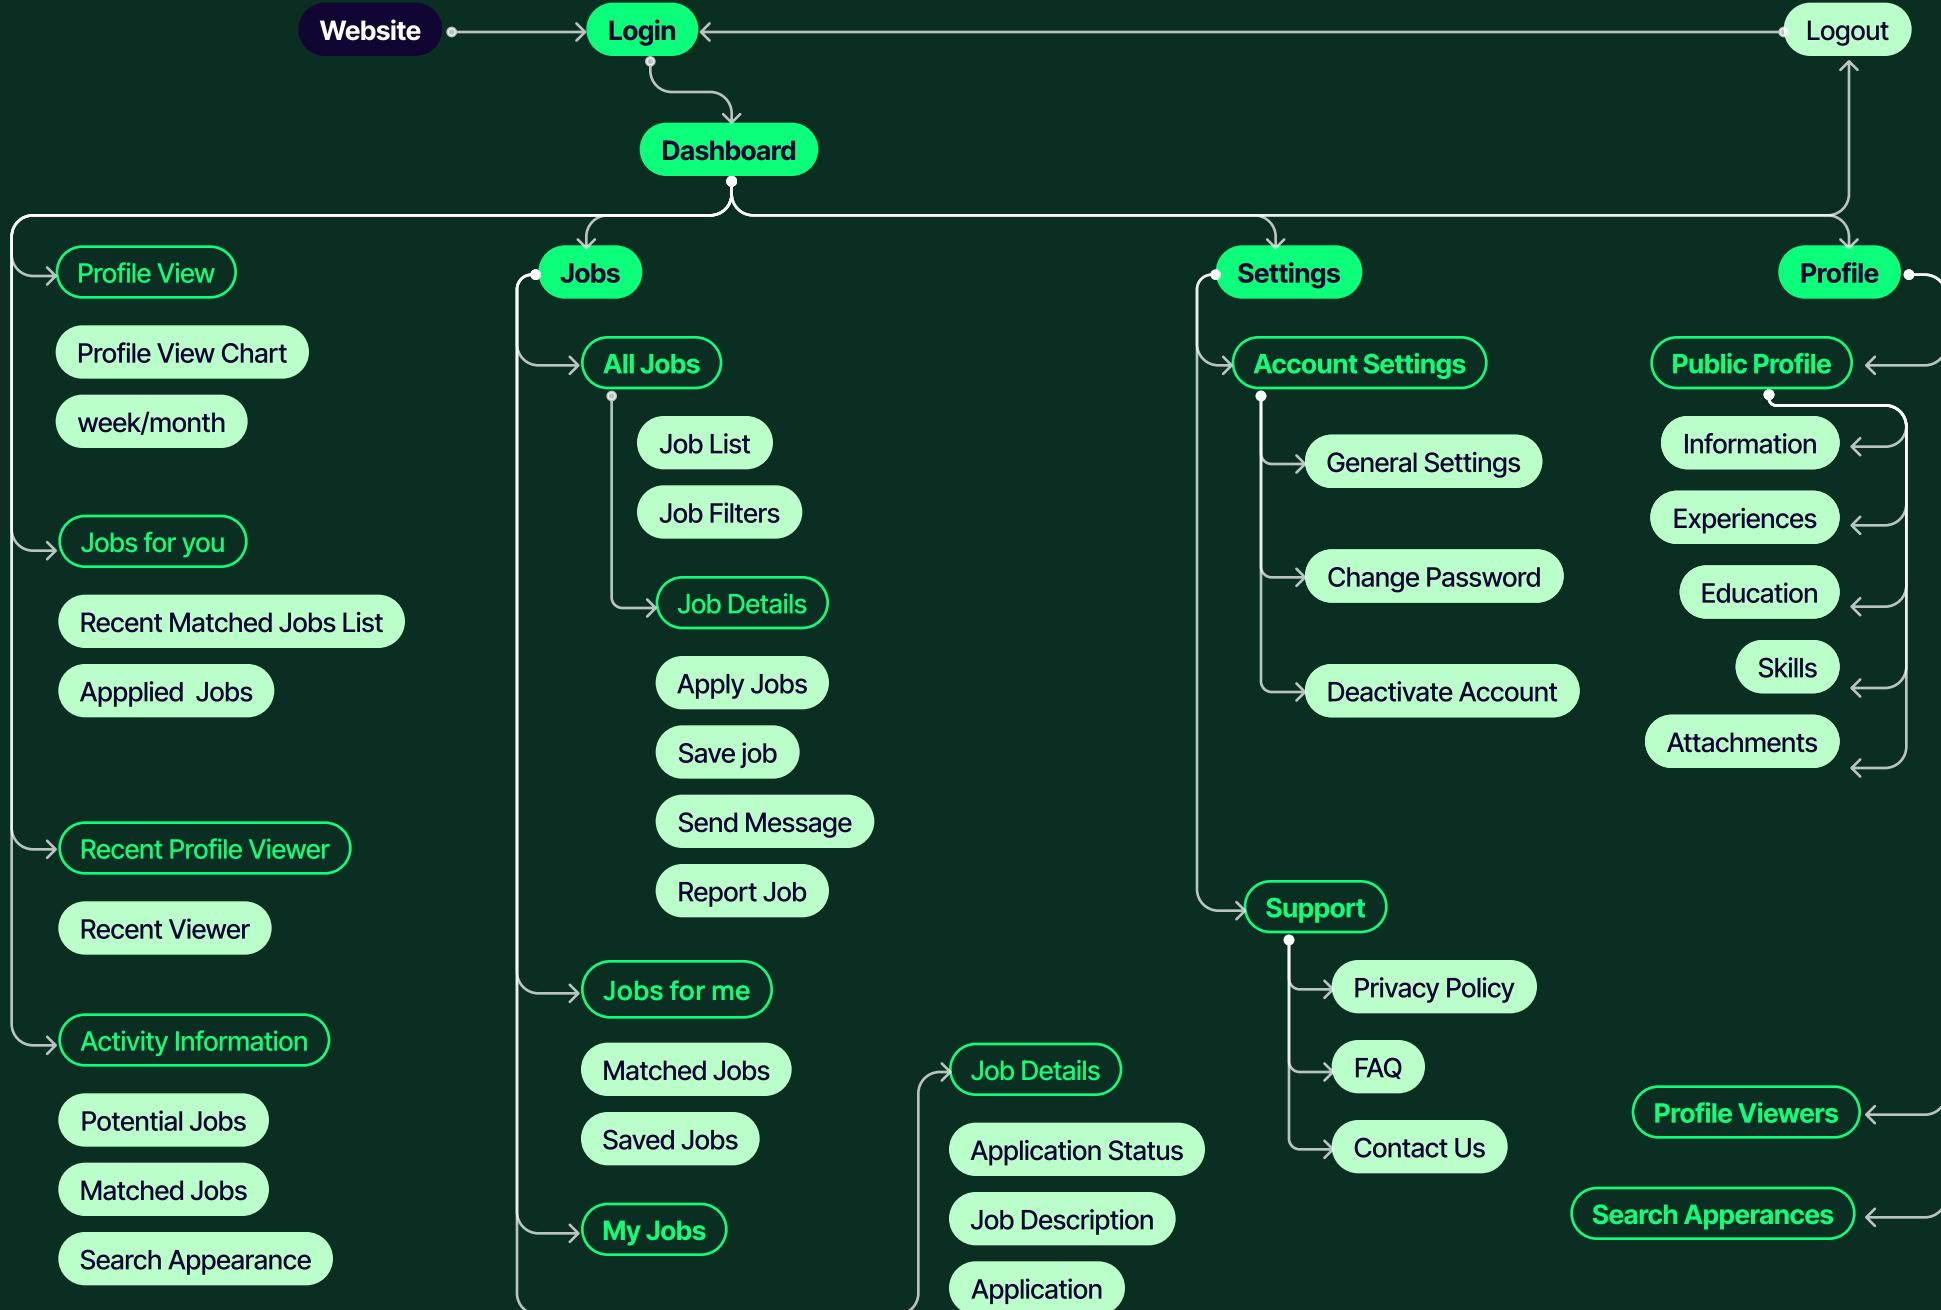

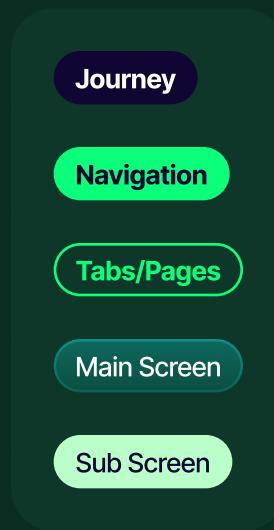

Responsibilities

- Work on and execute design projects from start to finish while meeting creative and technical requirements.
- Collaborate closely with engineers, researchers, clinicians and product managers to iterate rapidly.
- Work on the entire project lifecycle, from wireframes to detailed specs across multiple UX platforms.
- Participate in regular design reviews and other team-wide design efforts; create and contribute to a great design team culture.
- Participate in user-experience research and usability studies.

Qualifications and Skills

- BA/BS degree in Design, HCI, CS, or related field, or equivalent practical experience.
- 3+ years of relevant UX Design experience in consumer products, medical devices or other relevant areas.
- Portfolio of UX design work.
- Proven ability to work across the design process, from developing strong conceptual foundations

# Information Architecture

# Sketchs, Wireframing and Testing

The following steps were to sketch wireframes based on the user flow maps and built the flow and low-fidelity prototype for a series of testing sessions.

- Creating wireframes helped me to visualize the ideas and gave us the basic structure for how users would use the app.
- When creating these wireframes, we kept the user needs from the earlier findings and research in mind.
- I have done several testing sessions with a close group of users.

The image displays a mobile application interface on the left and a detailed profile view on the right. The mobile interface shows a navigation bar with 'workd' logo, 'Hello Anamoul', and icons for Dashboard, Jobs, Profile (selected), Public Profile (highlighted), Profile Views, Search Appearances, and Settings. A sidebar at the bottom features an 'Invite Friends' button and an illustration of a person using a laptop. The detailed profile view on the right includes a search bar, a header with 'Anamoul Rouf' and 'Product Designer', and sections for Information, Experiences, Education, Skills, and Attachments. It also shows basic information like email (anamoulrouf.bd@gmail.com), phone number (+8801759693045), website (www.anamoulrouf.com), gender (Male), and location (Dhaka, Bd). The 'Experiences' section lists 'Sr. Product Designer'.

# UI Design

Before starting the UI design process, I always built a highly customizable design style guideline and reusable components.

- I have designed a design style guideline and reusable components.

## Explore the UI Screens

# Dashboard

# Search

The dashboard displays a search bar at the top with a magnifying glass icon and a placeholder 'Search'. Below it is a sidebar with 'Recent Searches' for Product Designer, UX Designer, Product Manager, and UI Designer. A large chart shows a fluctuating trend line with the value '4029' highlighted. The main area features a 'Jobs for you' section with five job card examples. Below this are sections for 'Potential Jobs' (13), 'Matched Jobs' (9), 'Search Appearance' (329), 'Applied Job' (8), 'Profile Viewer' (Hamish Marsh), and 'Last Applied Jobs' (ST). An 'Invite Friends' sidebar on the left encourages users to invite friends.

The dashboard is similar to the first one but includes a search input field at the top with placeholder 'Search' and a dropdown menu for location ('Dhaka, Bangladesh'), category ('Select Category'), and experience level ('Select Experience Level'). A 'Create Job Alert' button is also present. A modal window titled 'Apply & Search' is overlaid on the chart, containing a date range selector from 'Mar 10, 2020' to 'Mar 19, 2020' with 'Mar 19, 2020' highlighted in blue. The rest of the interface is identical to the first dashboard, including the 'Jobs for you' section and various performance metrics.

# Job Board

The screenshot shows the Workd platform interface. The top navigation bar includes a logo, a search bar with the query "Product Designer", and user profile icons for "Anamoul". Below the header are filter options for "Date Posted", "Job Type", "Experience Level", "On-Site/Remote", "Company", and "All Filter". On the left sidebar, there are links for "Dashboard", "Jobs" (selected), "All Jobs", "Job For Me", "My Jobs", "Profile", and "Settings". A "Invite Friends" section features a photo of a person working on a laptop and a "Invite Now" button. The main content area displays a list of "Jobs in Dhaka" (600 results) and a detailed view of a "Product Designer" role at Grameenphone. The detailed view includes the job title, company name, location, posting date, expiration date, and application status ("Applied on 23 May 20"). It also shows the contact information for the HR Manager, Hamish Marsh, and provides sections for "Responsibilities" and "Qualifications and Skills" with bullet-pointed lists.

# Messages

The screenshot shows the Workd app interface with a dark theme. At the top, there is a search bar with the placeholder "search job title or skill". To the right of the search bar are three small icons: a bell, a mail, and a user profile. The user profile is for "Anamoul" with a green verified checkmark.

The main navigation bar includes "Dashboard" (selected), "Messages", and other tabs like "Focused" and "Others". Below the navigation, there is a search bar with the placeholder "search by name".

The main content area displays a list of messages from "Hamish Marsh" (HR Manager at Grameenphone). Each message card shows a profile picture, the sender's name, their title, and a truncated message body followed by an ellipsis (...).

On the left side of the screen, there is a sidebar with the user's profile picture and the name "Hello Anamoul". Below the profile are four menu items: "Dashboard", "Jobs", "Profile", and "Settings", each with a corresponding icon. At the bottom of the sidebar, there is a "Invite Friends" section featuring a photo of a person working on a laptop and a blue "Invite Now" button.

At the bottom of the main content area, there is a large input field labeled "Write a message".

Sample messages from Hamish Marsh:

- Keeping this in mind, Grameenphone always brings future-proof technology in order to facilitate your progress.  
May 21, 2020, 7:51 PM
- My goal was to craft a functional and delightful experience through web and mobile apps currently consisting of 1.2M+ & future billion users.  
May 21, 2020, 7:51 PM

# Usability Testing

The goal was to assess the app's overall usability and identify areas for improvements that could facilitate the completion of the tasks. The participants were given the same set of jobs.

Due to the NDA issue, I've only shared the information authorized by the authority.

The screenshot shows the Workd app interface. At the top left is the user profile picture of 'Hello Anamoul'. The main navigation menu includes 'Dashboard', 'Jobs' (which is currently selected), 'All Jobs', 'Job For Me' (highlighted in purple), 'My Jobs', 'Profile', and 'Settings'. A sidebar on the right features an 'Invite Friends' section with a button to 'Invite Now' and an image of a person working on a laptop. The main content area displays a search bar at the top with placeholder text 'search job title or skill'. Below the search bar are filters for 'Date Posted', 'Job Type', 'Experience Level', and 'On-Site/Remote'. The main list is titled 'Jobs For Me' with 600 results, showing 'Matched' and 'Saved' buttons. The first result is a 'Product Designer' position at Grameenphone Dhaka, Bangladesh, posted on 15 May 20. It includes a 'View Jobs' button and 'Apply' and 'Saved' buttons. To the right of the list, there is a sidebar for 'Product Designer' roles, listing 'Hamish Marsh' as an HR Manager at Grameenphone. The sidebar also details responsibilities, qualifications, skills, and preferred qualifications.

**Product Designer**  
Grameenphone Dhaka, Bangladesh  
Posted on 15 May 20: Expire on 30 May 20

**Responsibilities**

- Work on and execute design projects from start to requirements.
- Collaborate closely with engineers, researchers, clients, and stakeholders to deliver high-quality designs rapidly.
- Work on the entire project lifecycle, from wireframing to final product launch.
- Participate in regular design reviews and other team meetings to contribute to a great design team culture.
- Participate in user-experience research and usability testing to refine designs.

**Qualifications and Skills**

- BA/BS degree in Design, HCI, CS, or related field.
- 3+ years of relevant UX Design experience in consumer-facing products and services.
- Portfolio of UX design work.
- Proven ability to work across the design process, from user research to refining the smallest details with high quality and attention to detail.

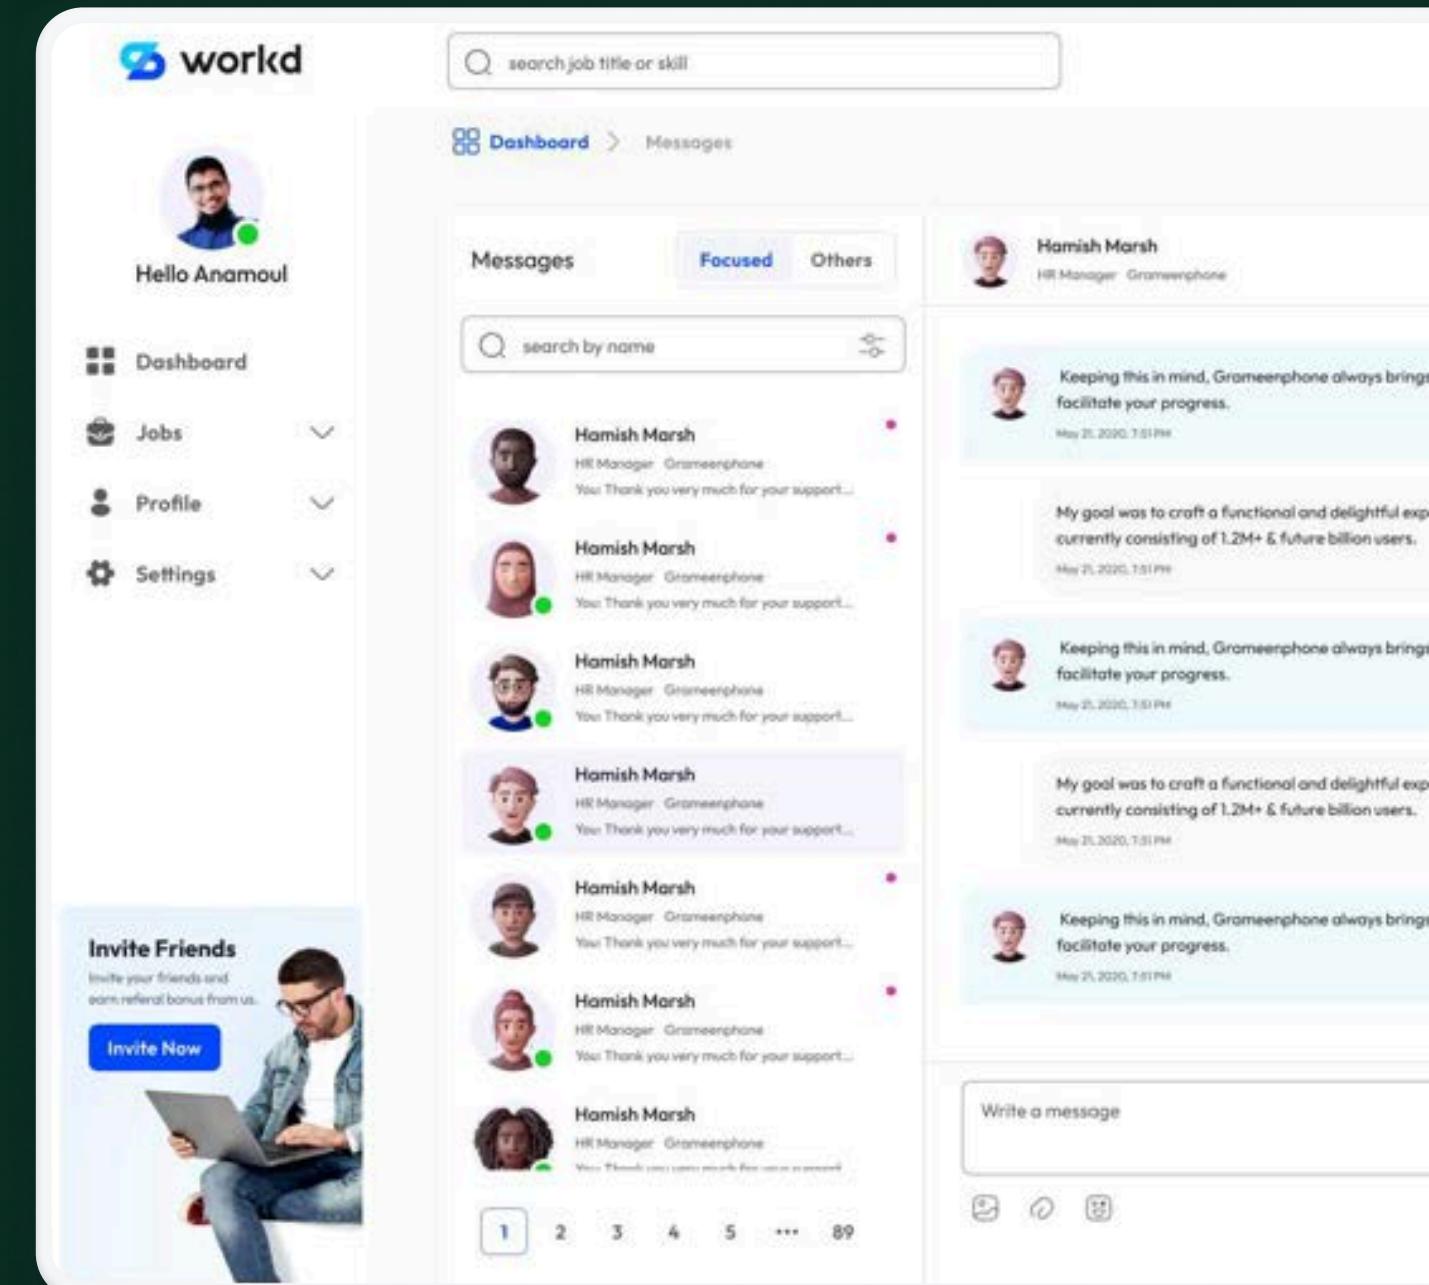

**Preferred Qualifications and Skills**

1. Experience designing for health-related products.
2. Experience designing for wearable devices.

## Refine & Deploy

Based on the usability testing sessions, we refined and updated the design. Then, we created deliverables for development handover. I maintained continuous communication with the developers during the development period.

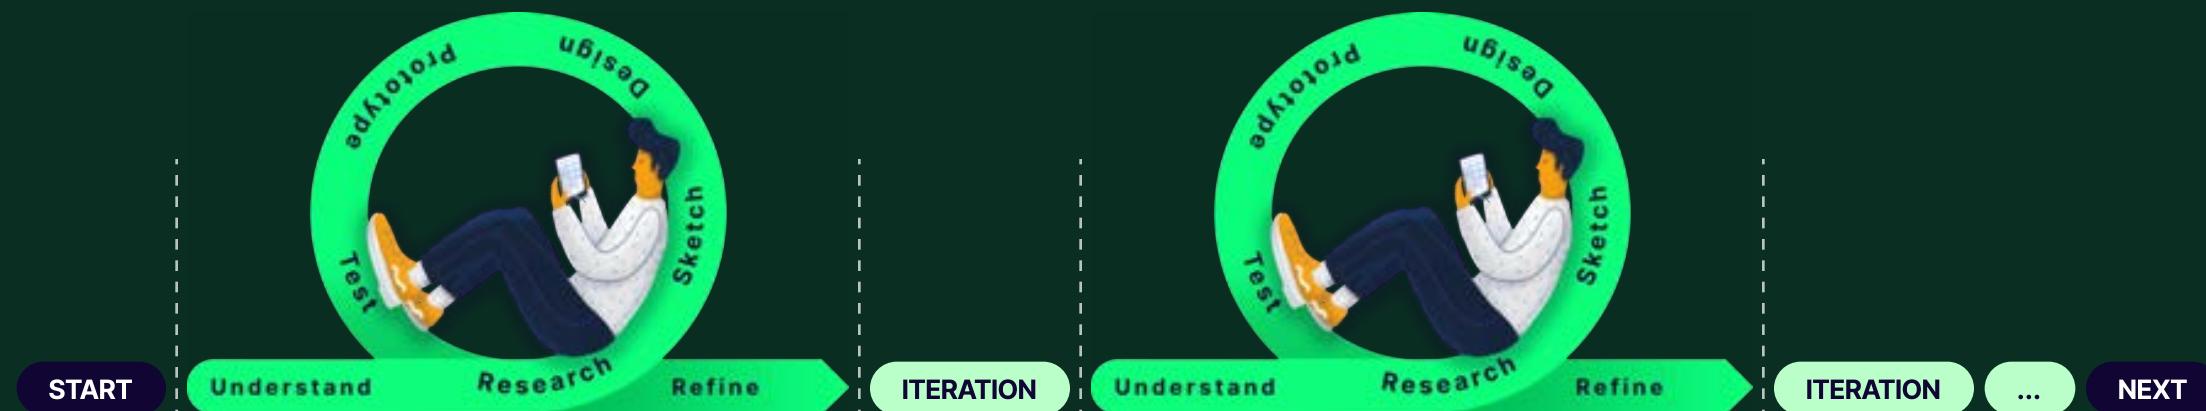

After the successful deployment, it is time to collect feedback from the user.

# Results & Future Iteration

We've monitored and measured the results for the first 6 months.

- The number job applications success rate was **increased by 35%**.
- A job portal with more efficiency and functionality job search experience.

# Thank you

The screenshot shows the Workd app's dashboard. At the top, there's a search bar with the placeholder "search job title or skill". Below it is a profile card for "Hello Anamoul" featuring a small profile picture. To the right of the profile card is a large number "4029" with three dots, likely representing the total number of profiles viewed. The dashboard is divided into several sections:

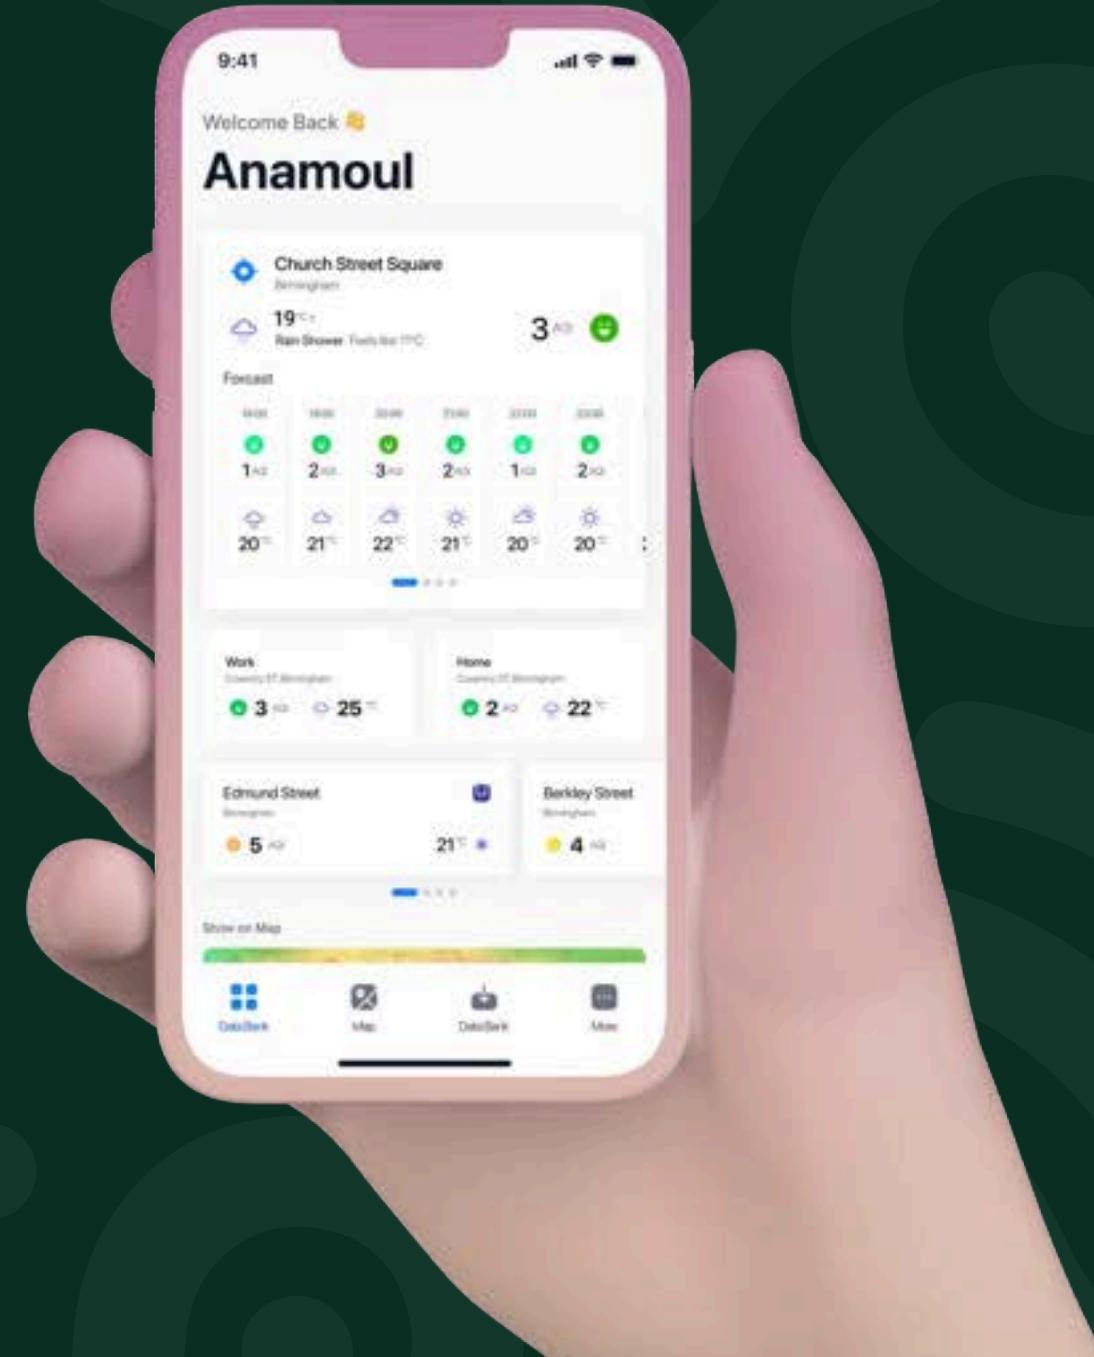

- Profile View (This Month):** A line chart showing profile views over time. A callout highlights a peak of "605" views on "Mar 16, 2020".
- Potential Jobs (This Month):** Shows 13 potential jobs.
- Matched Jobs (This Month):** Shows 9 matched jobs.
- Search Appearance (This Month):** Shows 329 search appearances with a green progress bar at 90%.
- Applied Job (This Month):** Shows 8 applied jobs.
- Profile Viewer:** Two entries for "Hamish Marsh" from "HR Manager, Grameenphone". Each entry includes a "View Profile" button.
- Last Appearances:** A section showing recent activity with icons for ST, Grameenphone, and others.

On the far right, there's a vertical sidebar with the heading "Jobs for You" and a list of companies with their logos: Teletalk, Banglalink, Grameenphone, ST, and another Banglalink entry.

# AirQI

A Real-time **AQI App**  
(Air Quality) with  
Weather Forecast

# A Real-time AQI App (Air Quality) with Weather Forecast

Project

**AirAQ App**

Timeline

**June 2021 – September 2021**

Platform

**Hybrid**

Tools

**Figma, FigJam, Notion.**

My Role

**UX Research, UI/UX Design.**

Team Collaboration

**Product, Business, and Tech.**

## Background

AirAQI provides real-time and forecast air pollution and weather data. Our main challenge is to design a hybrid app that provides an intuitive customize experience to its users.

## Goal

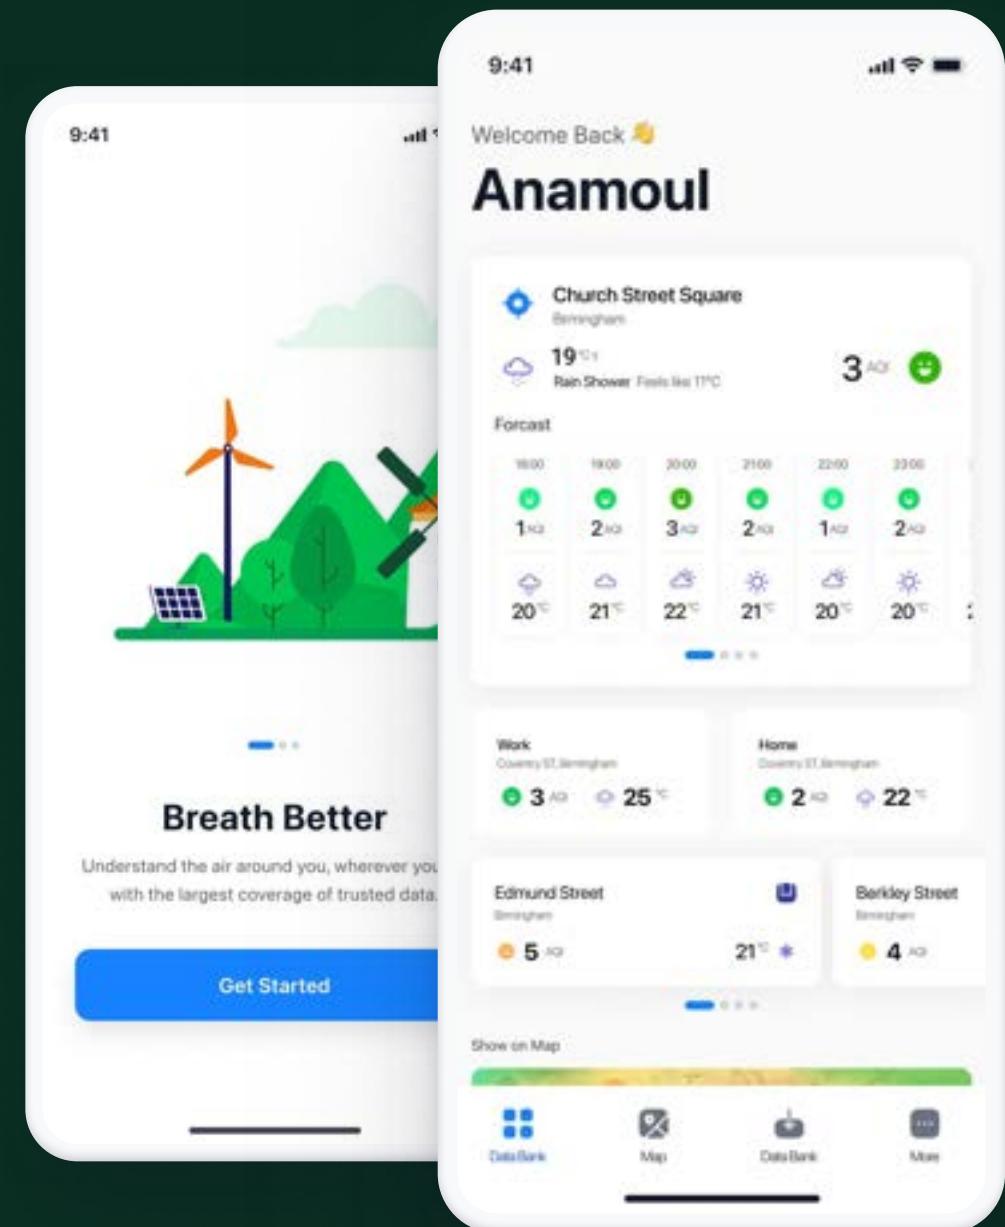

- Design a conversion-friendly user flow.
- Get more efficient, functional, and scalable apps with more efficient, and functional.

# Design Challenge

Our main challenge was to design a web app that facilitates its users to know about air quality and weather information.

- It has to be easily used by non-tech people.
- Users can get air quality and weather updates through notifications for saved & current locations.
- Users can get air quality and weather forecast.
- Users can also request air quality information data.

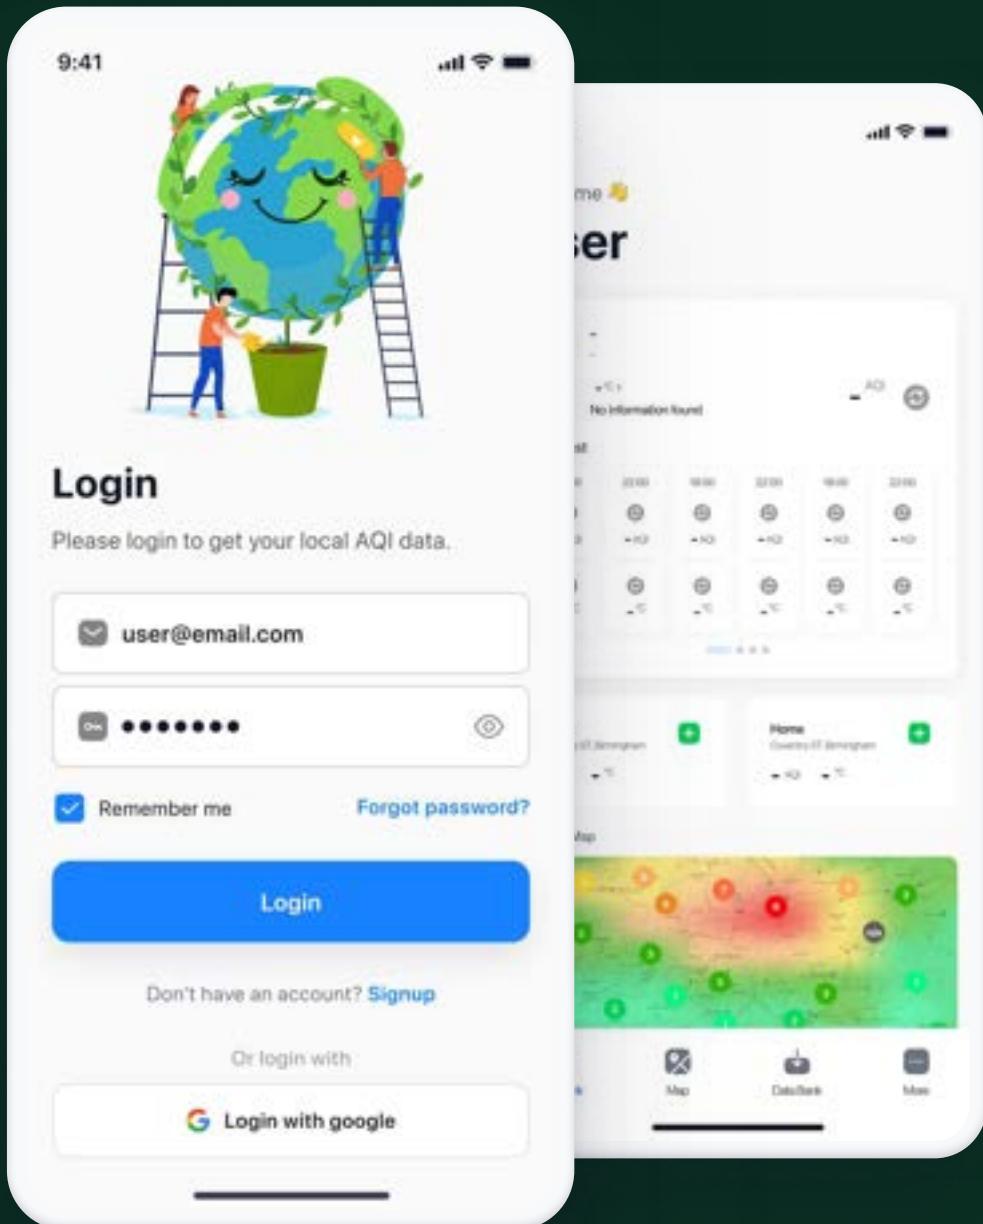

# The UX Process

When we have minimal time and resources, selecting an efficient, sustainable, and flexible design process is always challenging. I have chosen the approach to the Lean UX process. It is an iterative process with three simple steps.

- Think
- Make
- Check

and keep repeating the steps.

## The Discovery

The discovery phase was a quick, high-intensity effort that allowed us to -

- Define project goals and milestones
- Review the existing solutions by other similar products
- Understand business visions
- Empathize the users' needs, behaviors, and pain-points
- Understand technological feasibility and constraints.

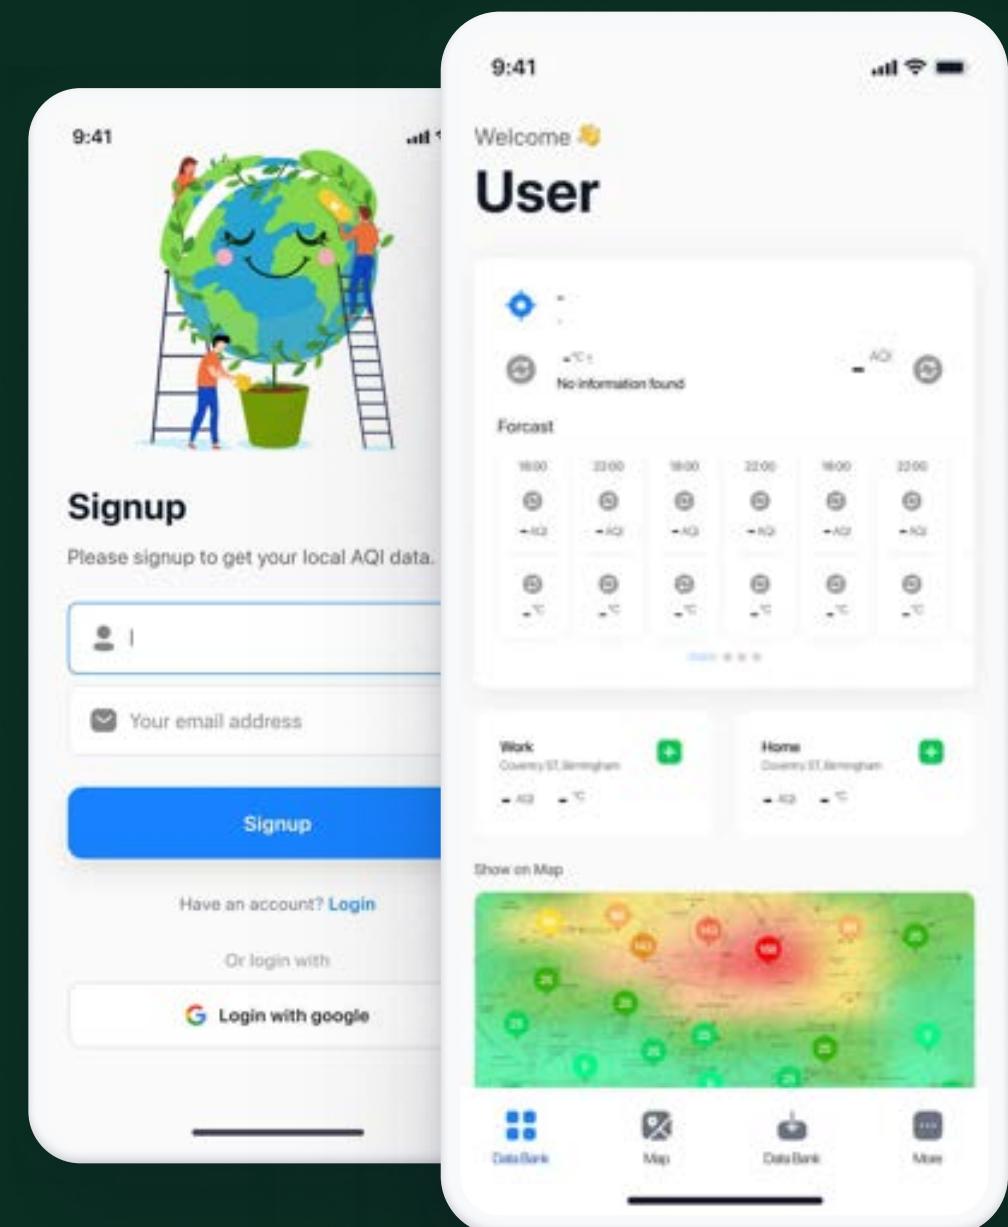

Here are three considerations that help me to understand and prioritize the issues.

- How satisfying is the solution for users?
- How well is this solution for users' problem solving and also good for business?
- How challenging would it be to build from the technical feasibilities and limitations?

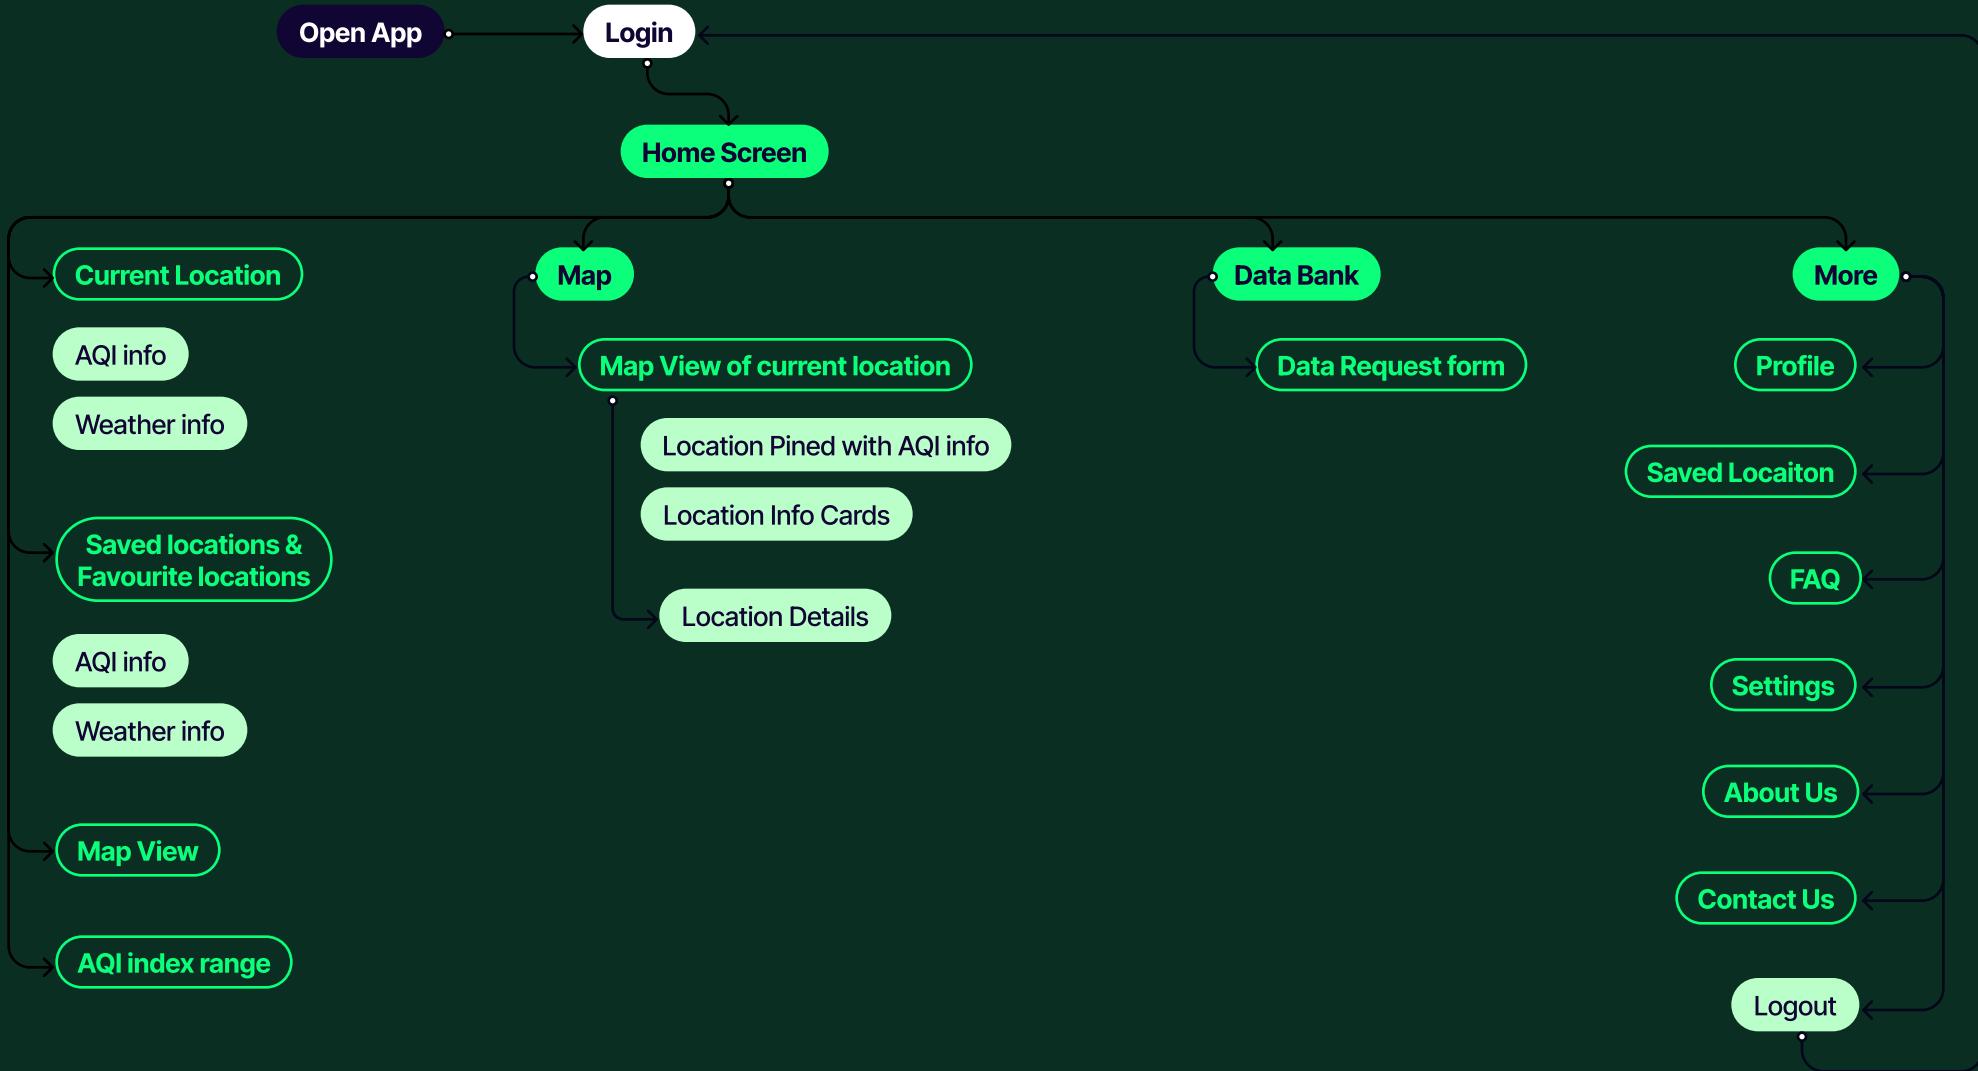

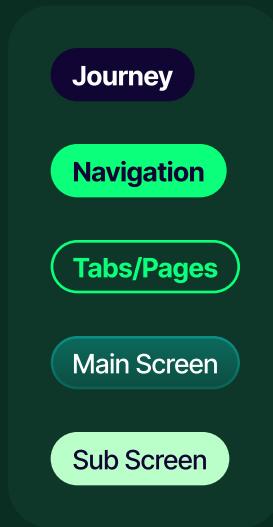

# The Findings

We have sessions with 10 targeted users. We also had brainstorming discussion sessions with our internal cross-functional team members. So what we found-

- I analyzed IQAir, BreezoMeter, Plume Labs, Airveda, and other popular air quality information provider apps. I analyzed their user journey flows, information architecture, and information presentation flows.

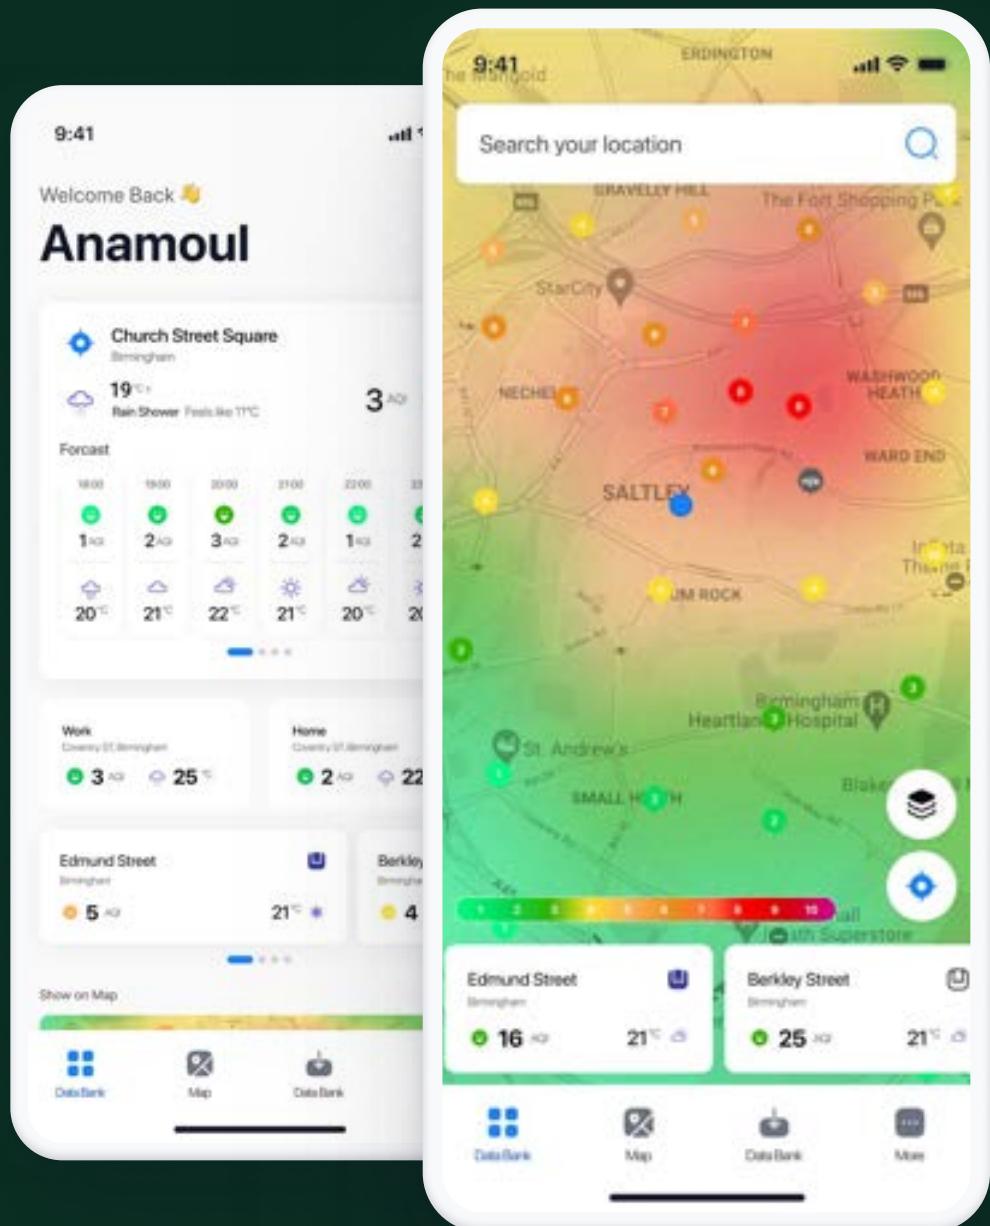

# Information Architecture

# Sketches, Wireframing and Testing

The following steps were to sketch wireframes based on the user flow maps and built the flow and low-fidelity prototype for a series of testing sessions.

- Creating wireframes helped me to visualize the ideas and gave us the basic structure for how users would use the app.
- When creating these wireframes, we kept the user needs from the earlier findings and research in mind.
- I have done several testing sessions with a close group of users.

# Design Guideline & Design System

Initially, we built basic style guidelines. Afterward, we built a highly customisable design system to create a design language

# UI Design

I have designed a design style guideline and reusable components.

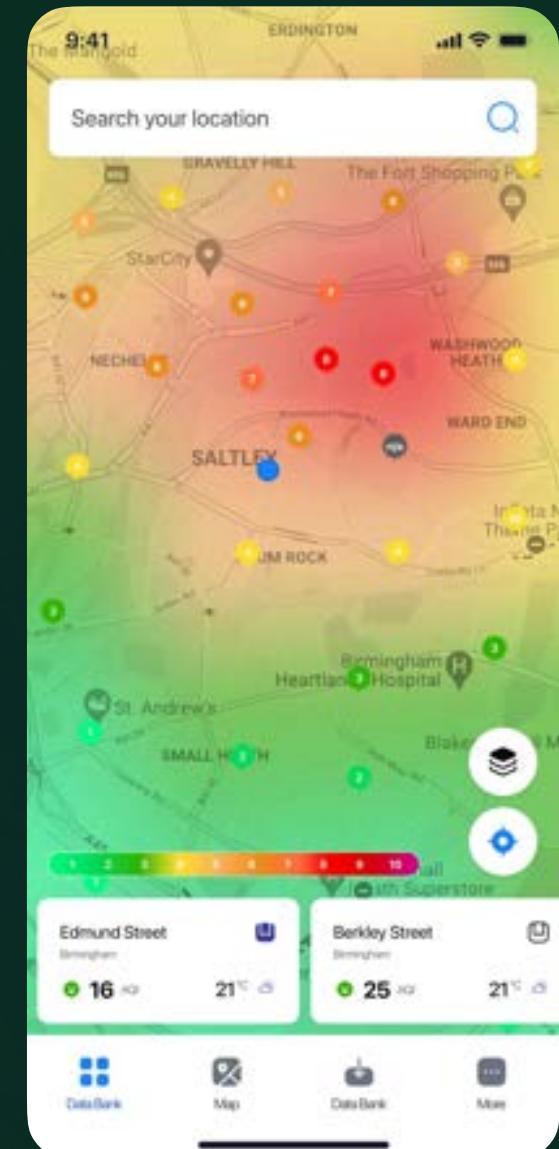

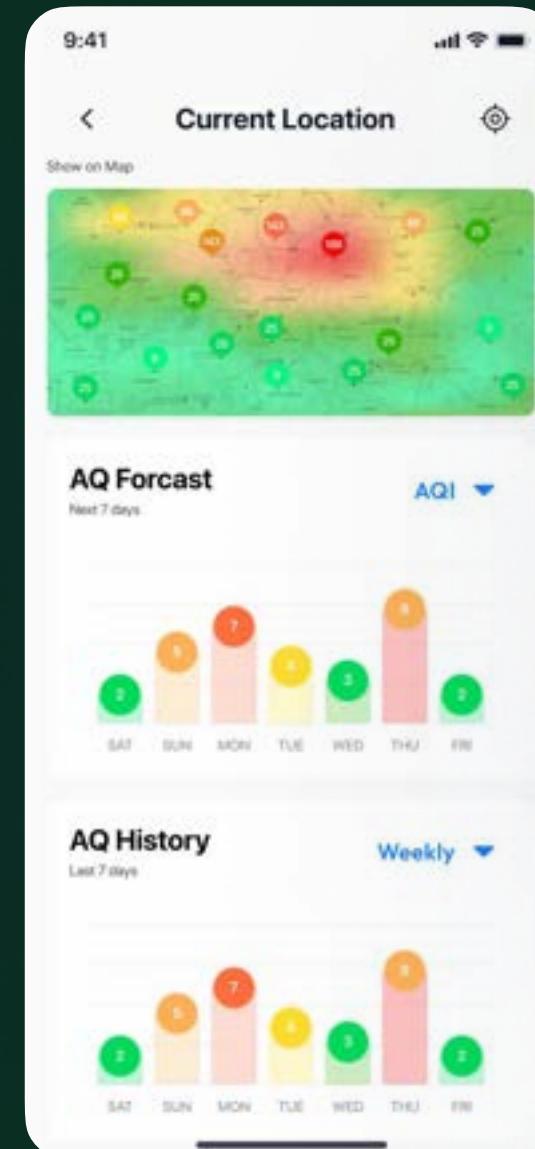

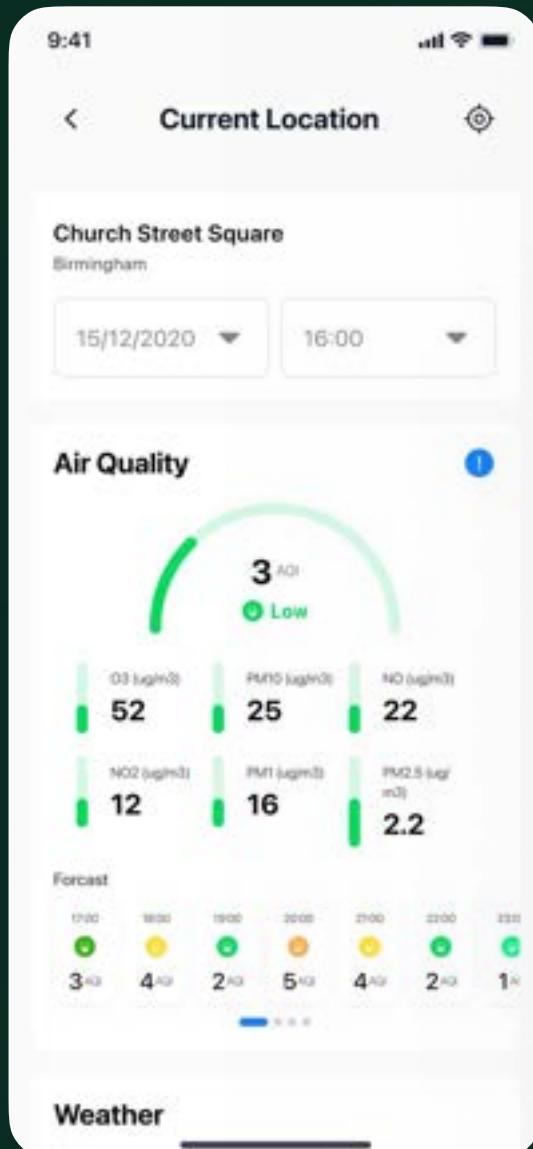

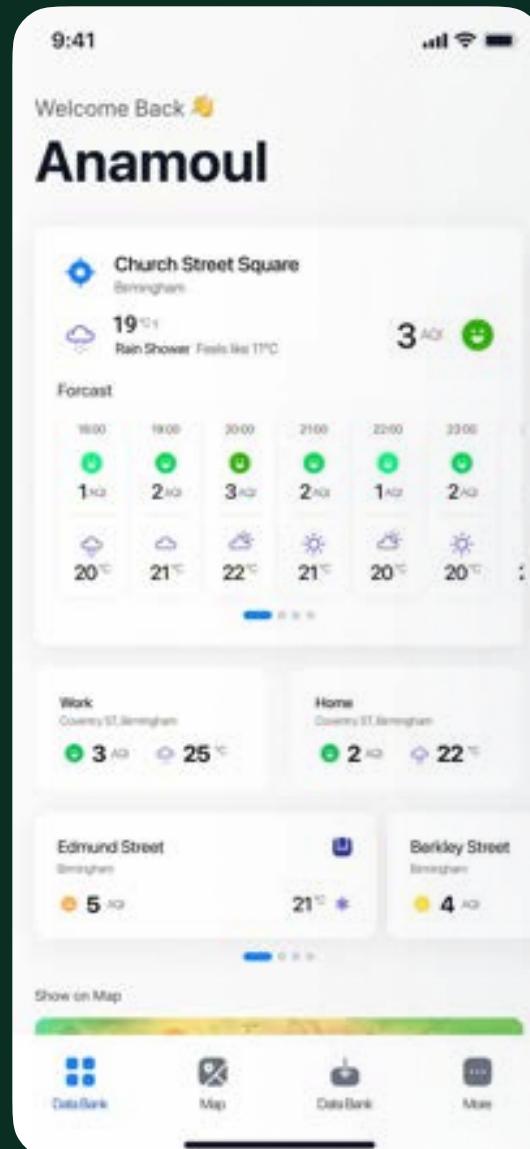

[Explore the UI Screens](#)

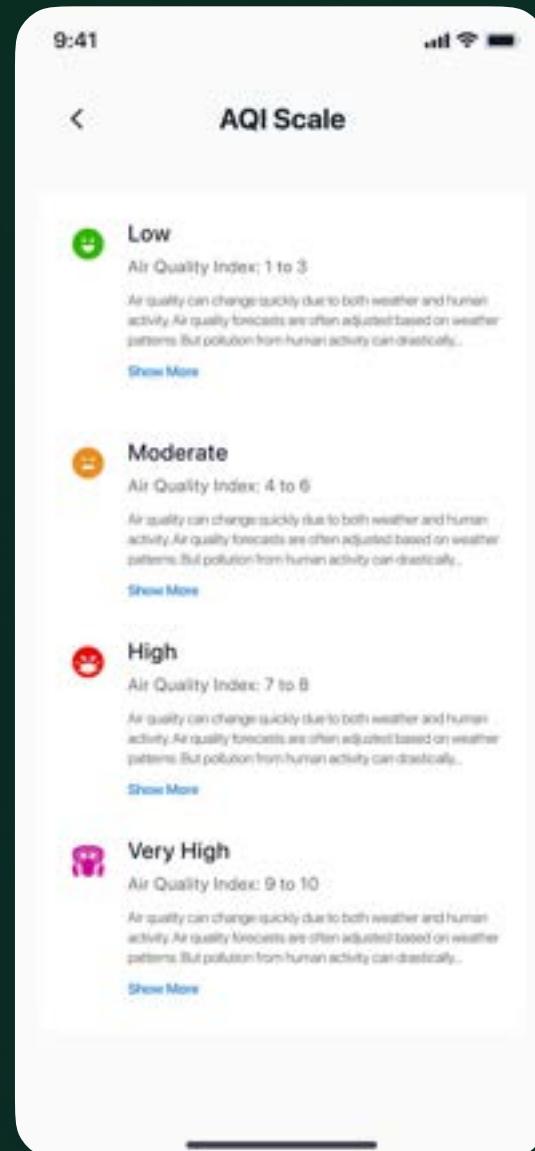

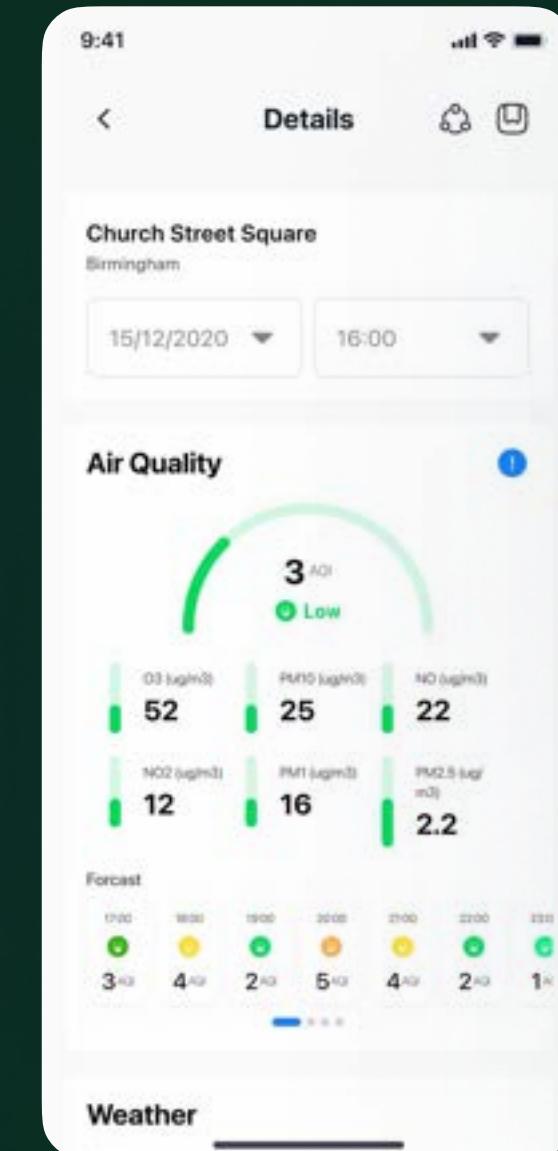

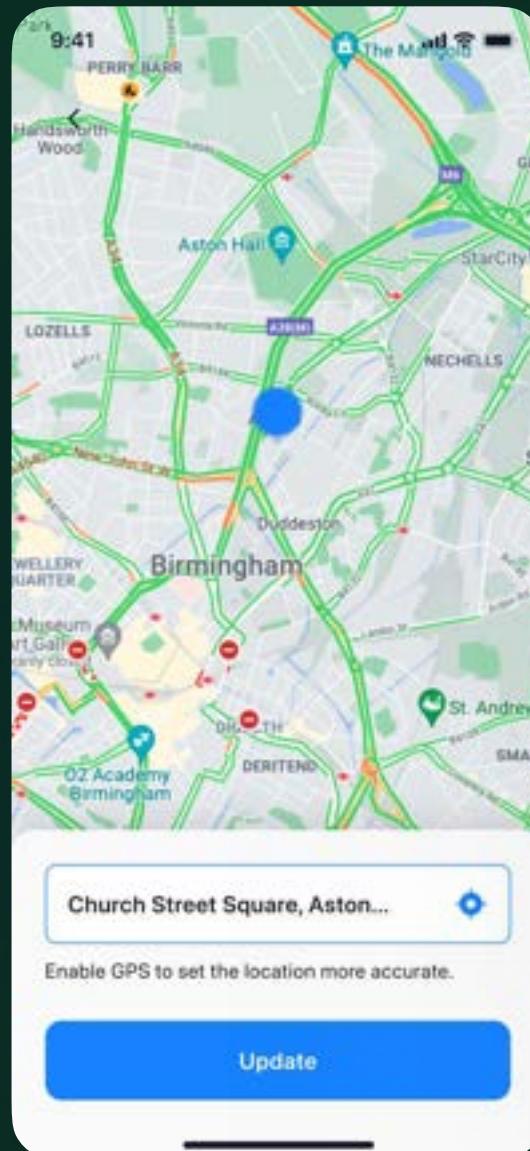

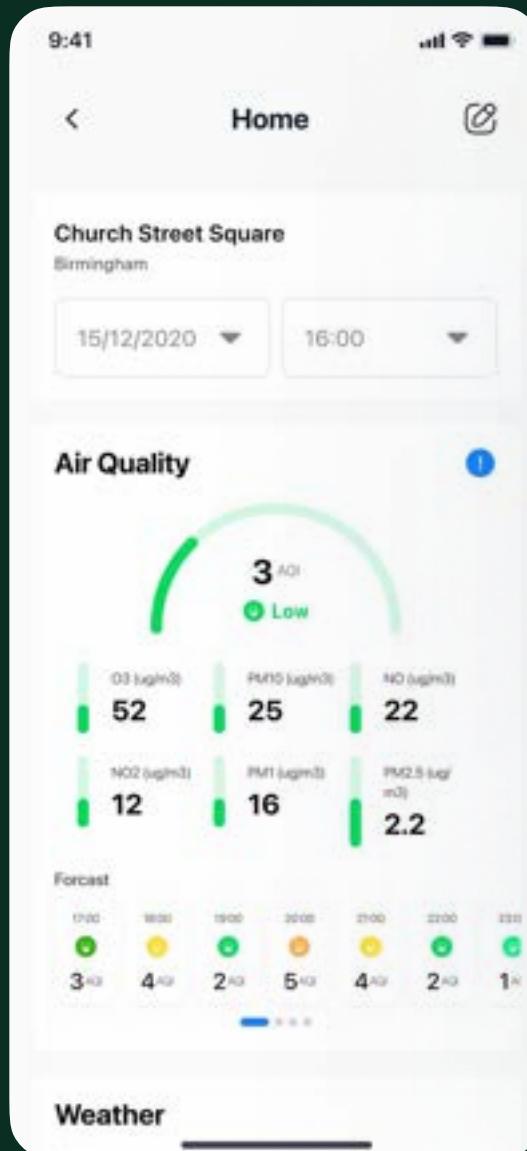

# Onboarding

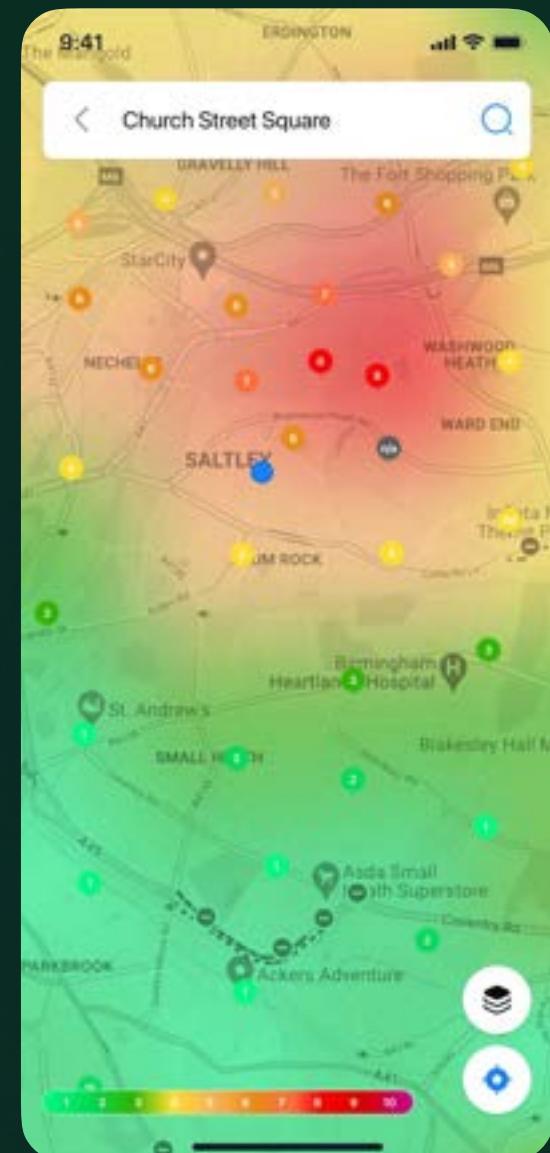

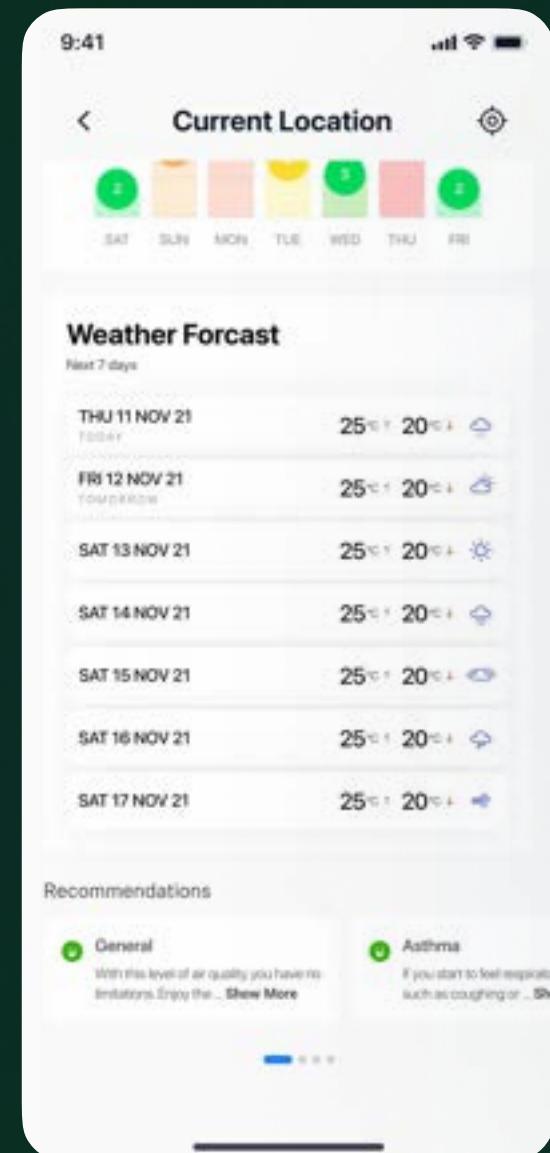

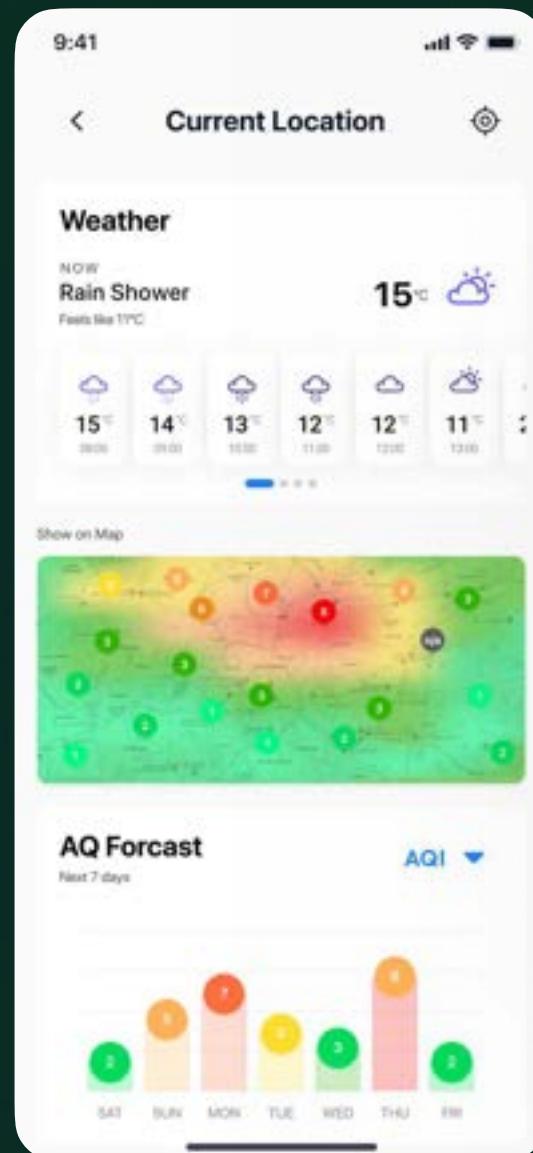

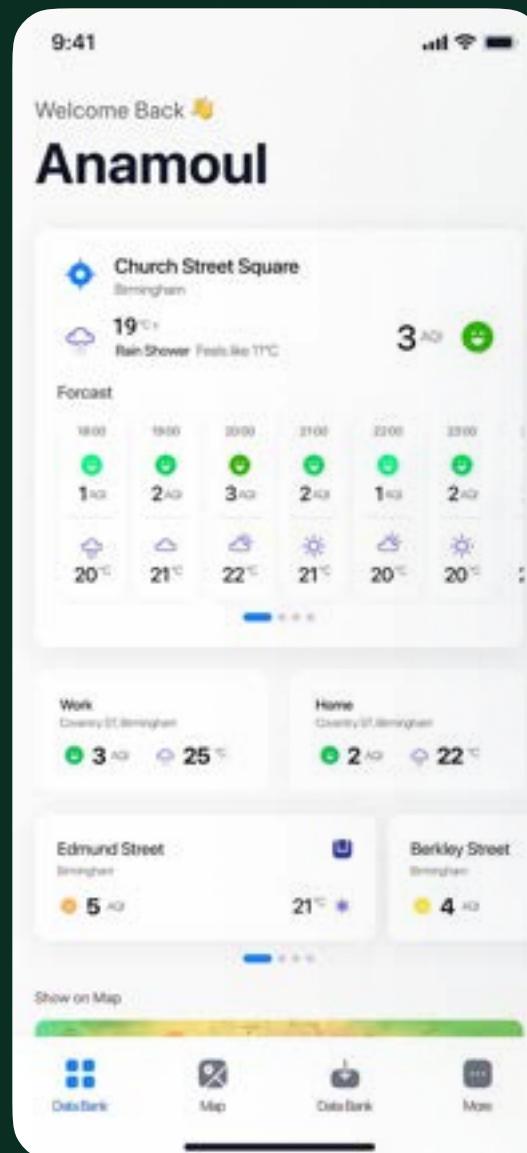

# AQI Information

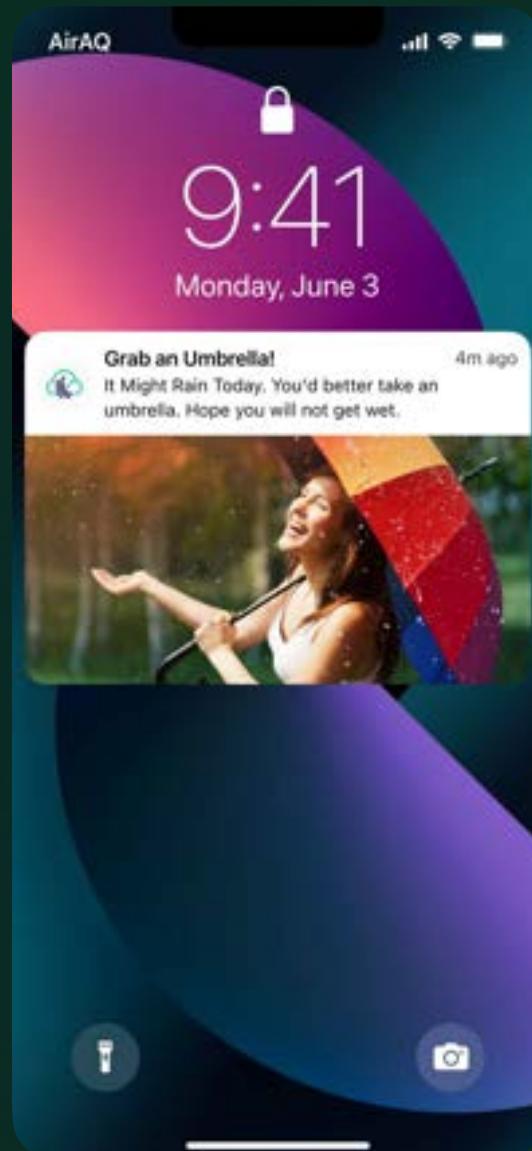

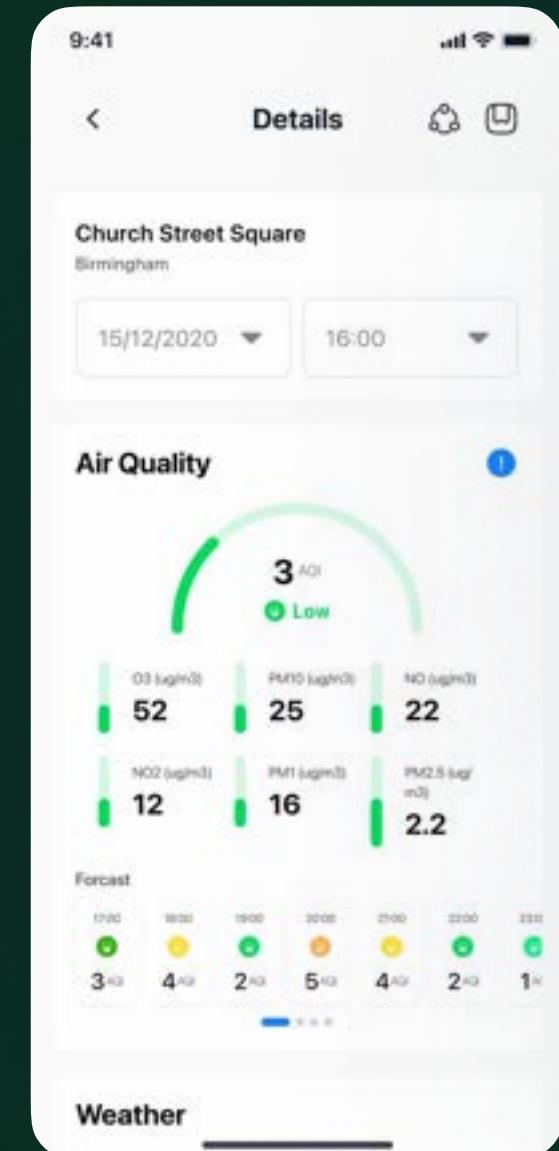

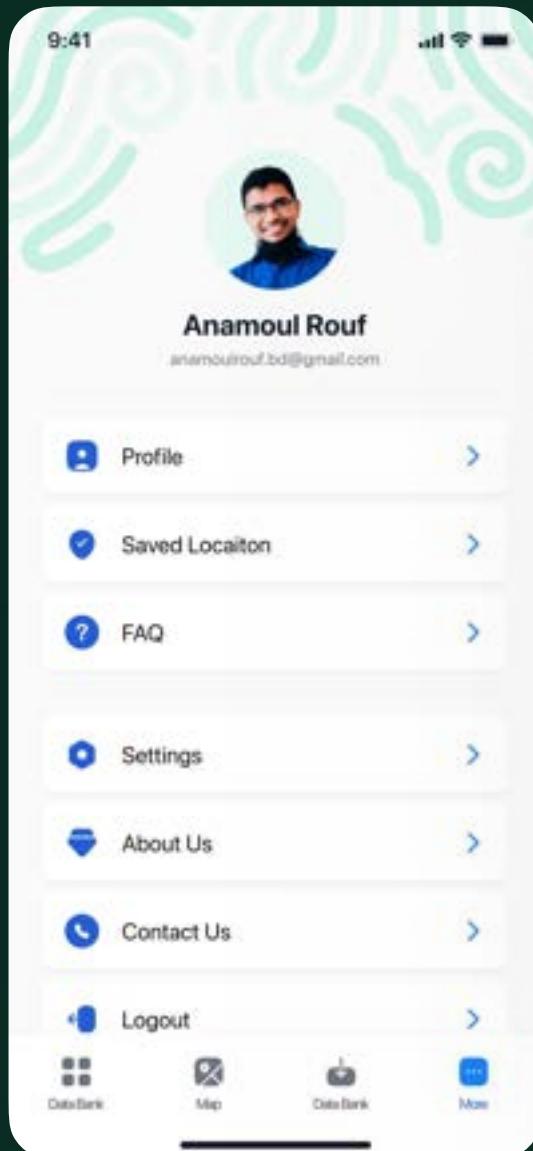

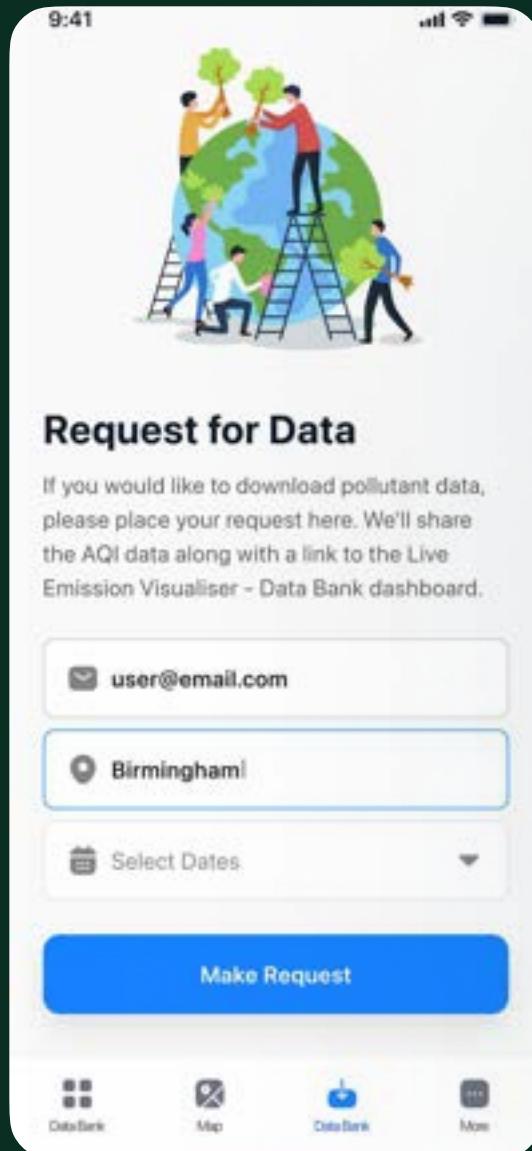

# AQI Information

# Weather Update

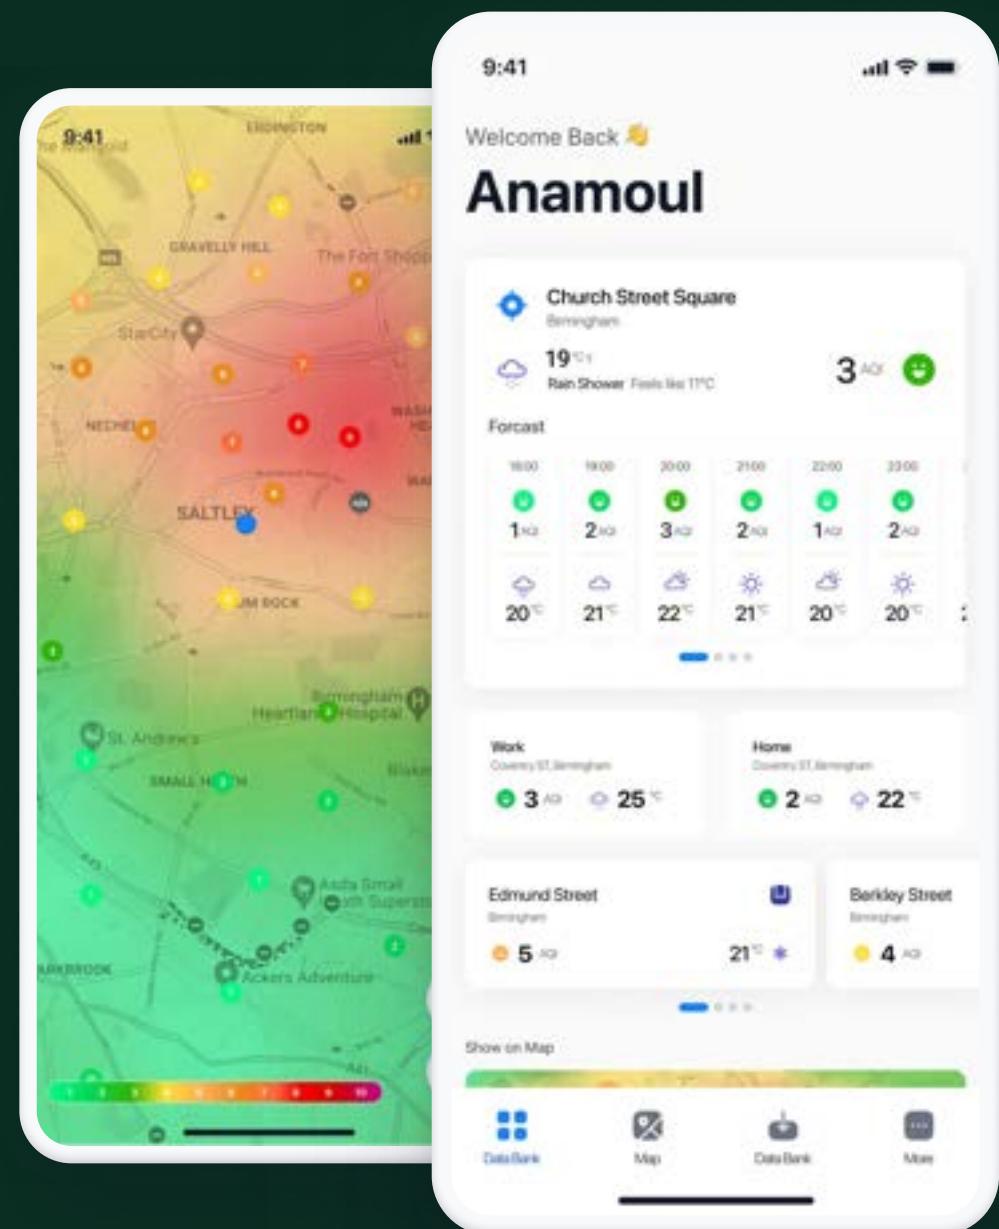

# Other Screens

# Usability Testing

The goal was to assess the app's overall usability and identify areas for improvements that could facilitate the completion of the tasks. The participants were given the same set of jobs.

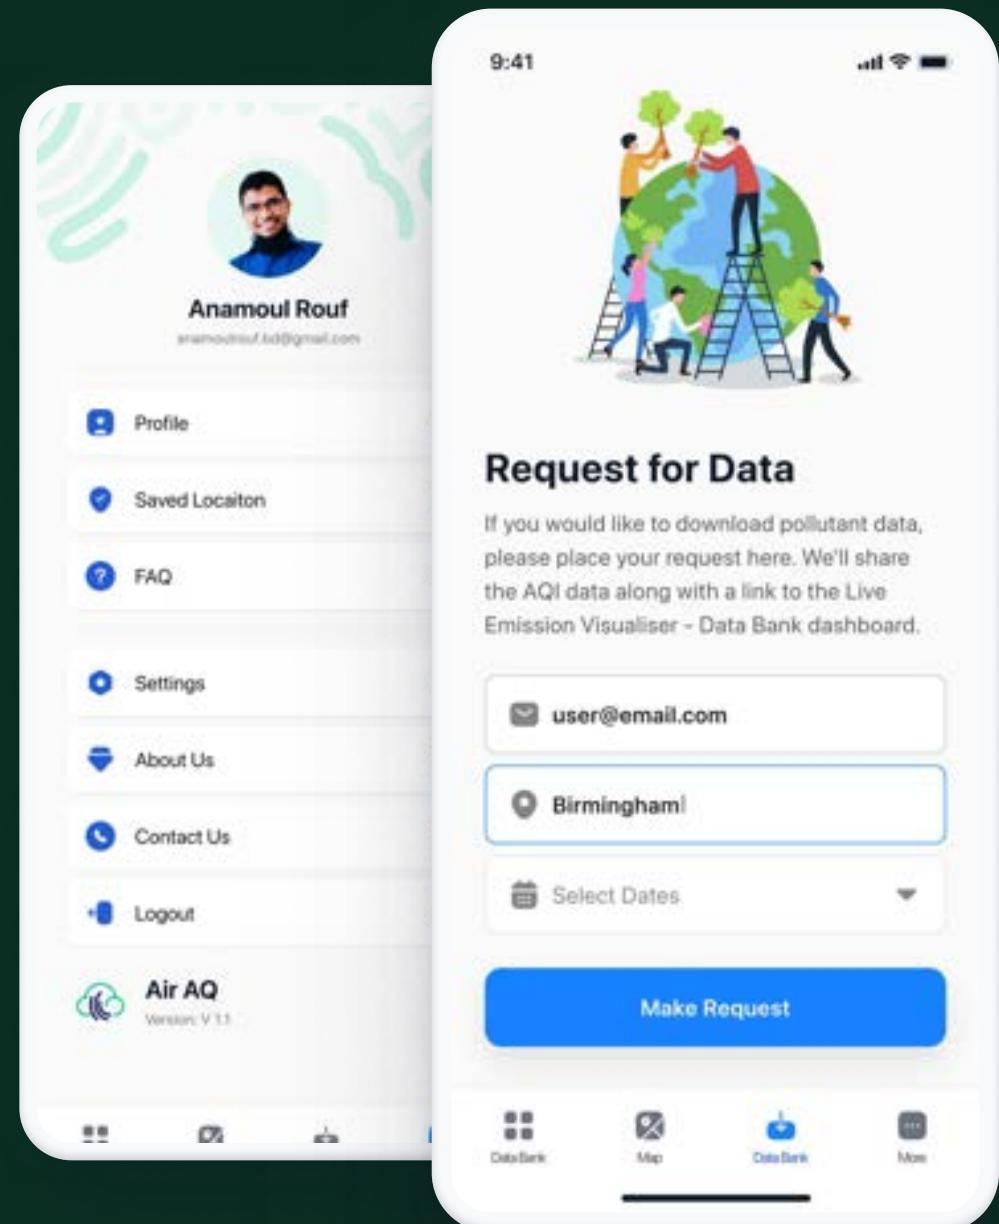

Due to the NDA issue, I've only shared the information authorized by the authority.

## Refine & Deploy

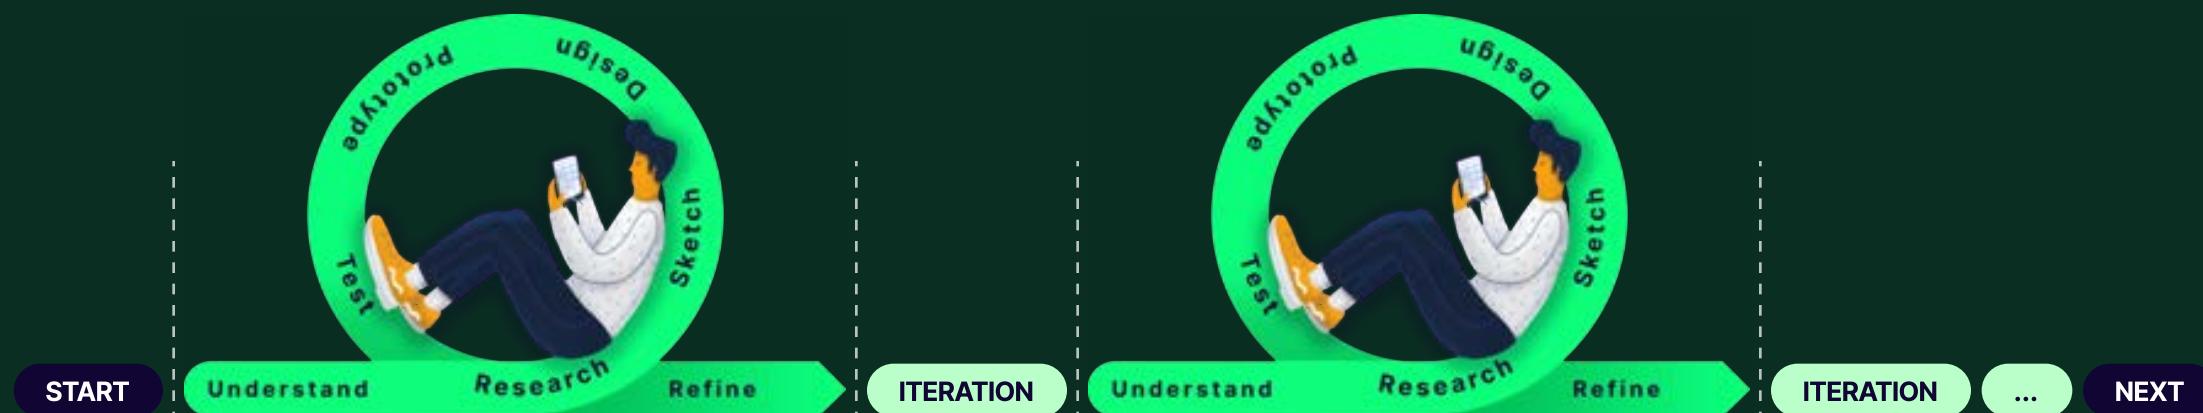

Based on the usability testing sessions, we refined and updated the design. Then, we created deliverables for development handover. I maintained continuous communication with the developers during the development period.

After the successful deployment, it is time to collect feedback from the user.

# Results & Future Iteration

As it was an one-time client project, I don't have the opportunity to measure the results.

# Thank you

# Redefine the experience for Advertiser & Publisher

Project

G&R Dashboard Wireframe Design

Timeline

2 Month

My Role

UX Research, UI/UX Design

Tools

Miro, Figma.

Platform

Web App.

Team Collaboration

Product, Marketing & Customer Support, and  
Tech.

## Background

G&R Ad Network is a platform of advertisement network. It has type of customers-advertisers and publishers. I was requested to help G&R Product team to design a mid-fidelity wireframe.

## Design Challenge

The G&R team planned to restructure and redesign the existing platform for their customers. Our challenges was to define the user role, and to design functional, simple, intuitive, innovative, easy to use, conversion-friendly, and frictionless wireframes.

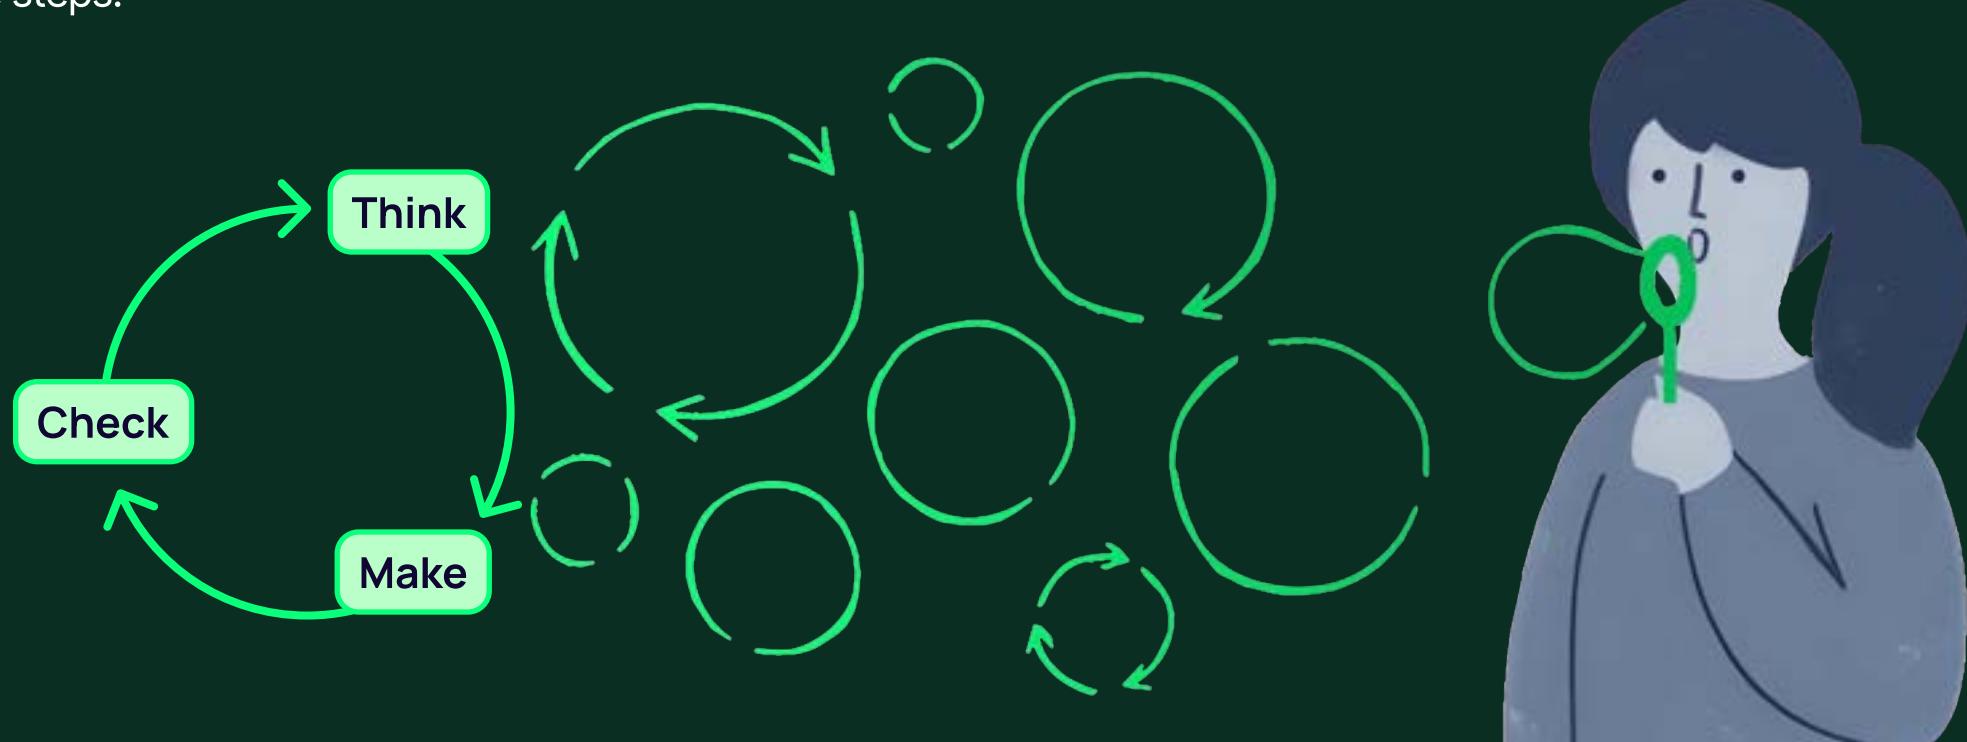

# Process

## Design Thinking & Lean UX Design

It is always challenging to select an efficient, sustainable, and flexible design process when we had very limited time and resources. I had selected the approach to the Lean UX process. It is an iterative process with three simple steps.

- Think
- Make
- Check

and keep repeating the steps.

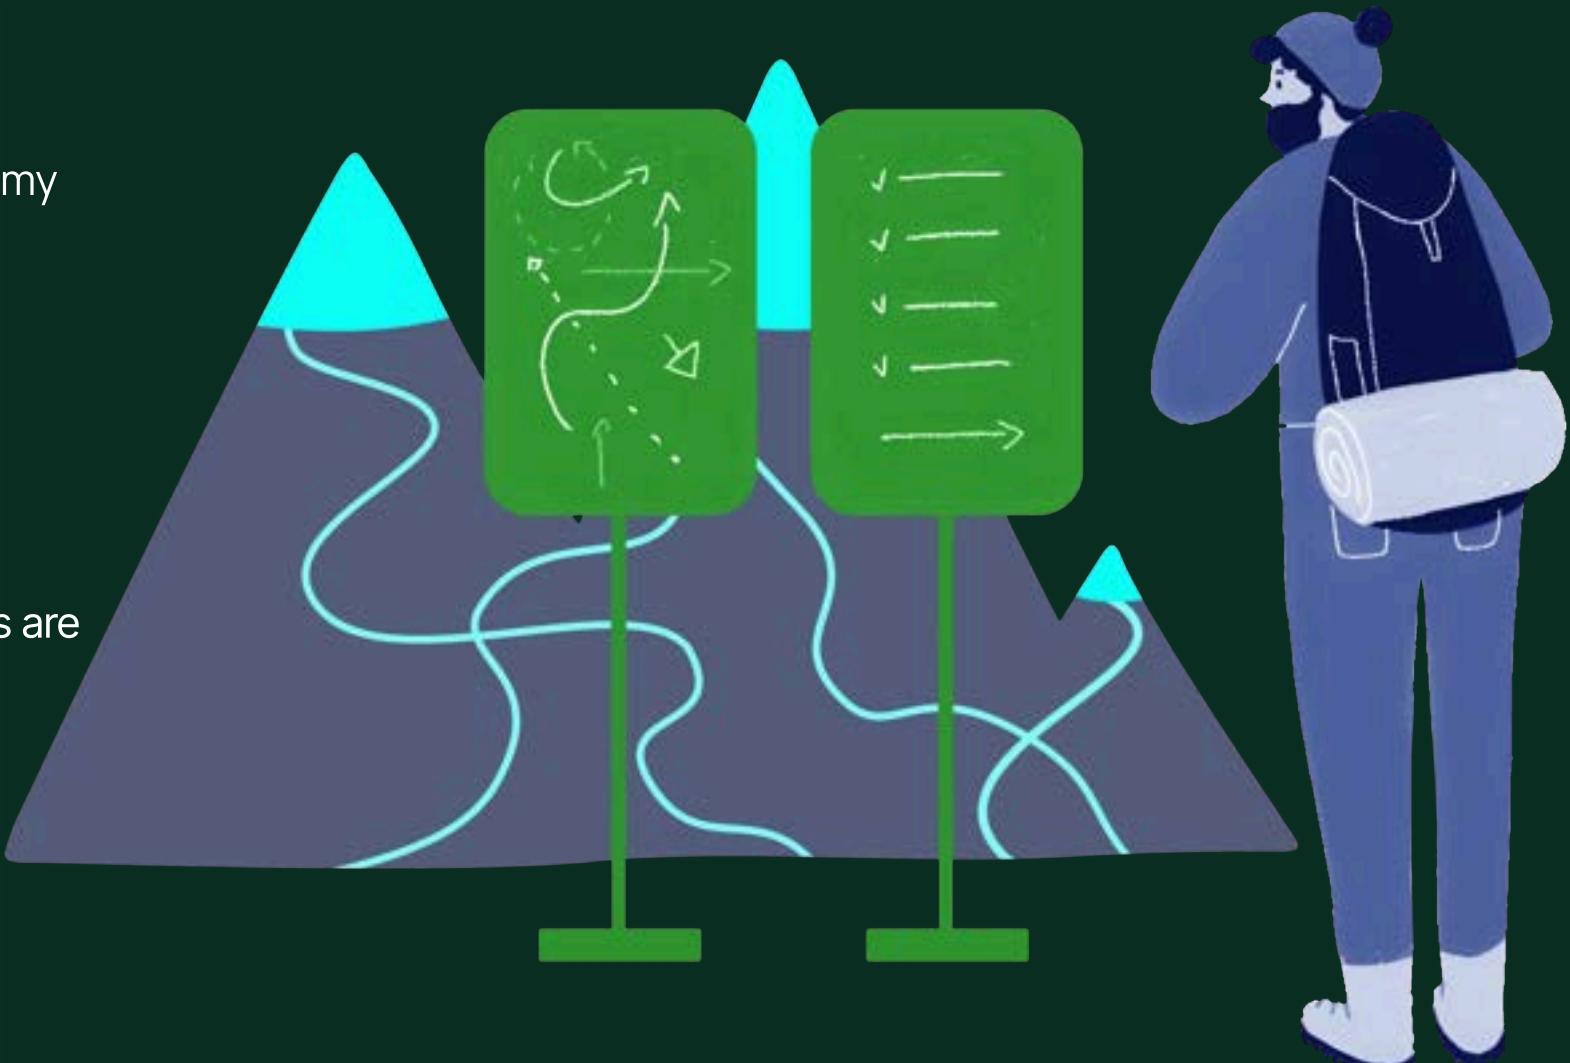

# Understanding

## I have no ideas about the ad network industry!

It is crucial to understand the end goal from users and business perspectives. So I started seeking answers to my questions.

- What does the product do?
- What are the business goals?
- Who is the audience? How they are related to it?
- Where they live, what they think, like & do?
- Why/How often do they use it?
- Do there are simillar products in market? How their users are using the services?

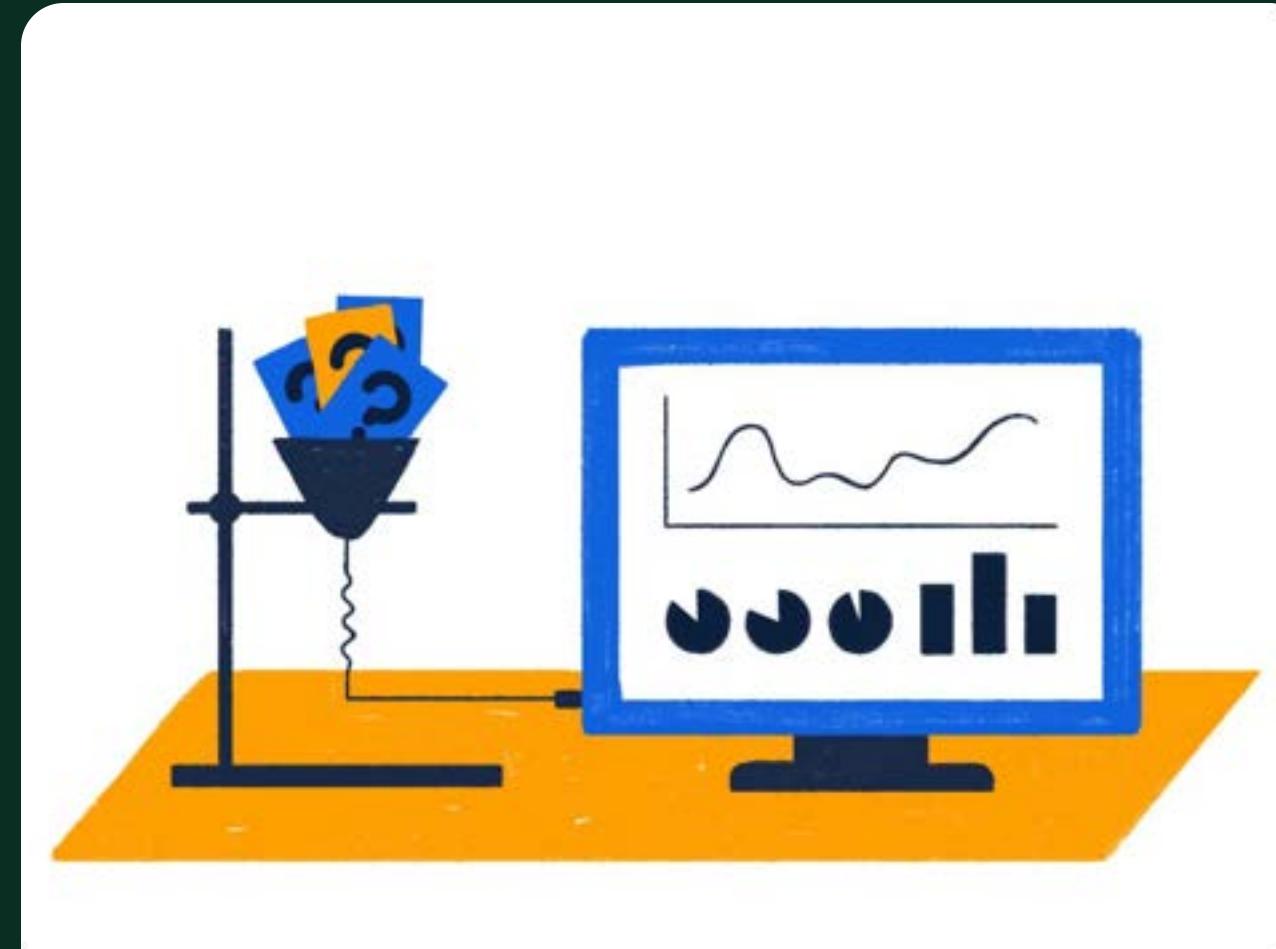

# Findings

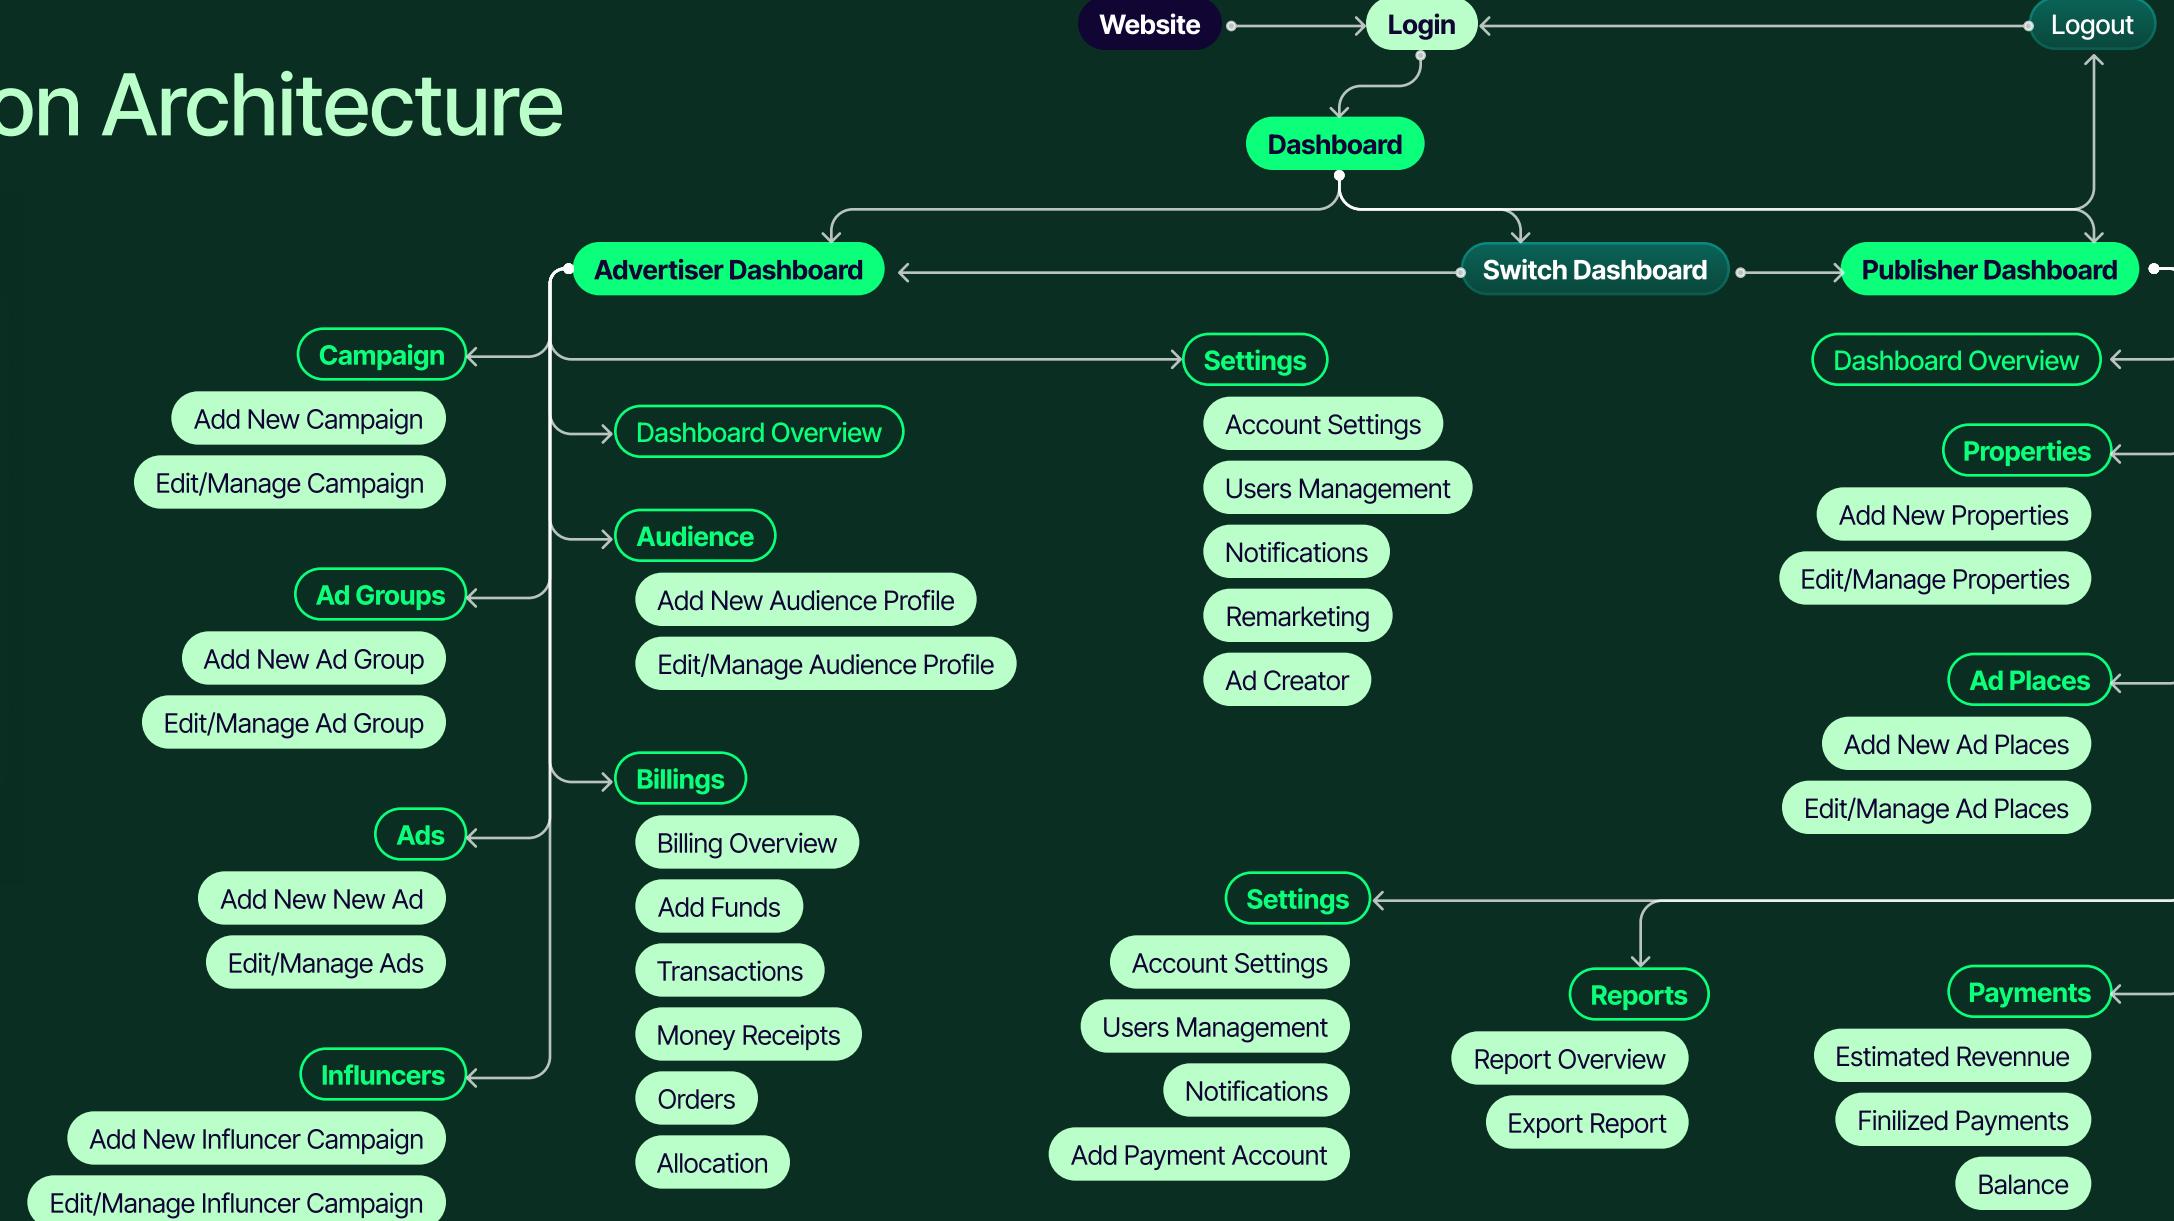

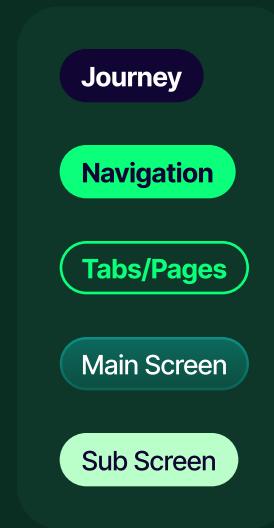

## We started with UX Audit in the existing system

To gain an insight, we explored the existing user journey to find the ux problems.

- There are 2 types of user roles in the system - Advertisers and Publishers.
- A customer can have one role in system. A customer can also have both roles if it is permitted from System Admin.
- Only the G&R authority will have the System Admin access.
- The customers who have the both roles, It is hard and confusing for them to do all the activities of both roles.  
Examples - switching user role, generate and export custom reporting, getting live data and forecast, using publisher credits to launch ad in advertiser dashboard.

# Information Architecture

# Wireframing & Prototyping

**We created digital wireframes and built a low-fidelity prototype. Also, we conducted a series of sessions for usability testing.**

The following steps were to sketch wireframes based on the user flow maps and built the flow and low-fidelity prototype for a series of testing sessions.

[Explore the Wireframe Screens](#)

# Testing

**We invited some focus group users for testing sessions.**

- Creating wireframes helped me to visualize the ideas and gave us the basic structure for how users would use the app.
- When creating these wireframes, we kept the user needs from the earlier findings and research in mind.
- We have done several testing sessions with a close group of users.

## Refine & Handover

**Based on the usability testing sessions, we refined and updated the Wireframes.**

We created deliverables for the handover. I maintained continuous communication with the team during the development period.

- Prepared design documentations
- Write user stories
- Maintained a close communication with the team
- Unit testing sessions with the demos

Outcomes & Future vision

# Validation & Future Iteration

It's an one time project.

So, I don't have the opportunity to measure the success of it.
