Hiring Manager

Optimizely,
Hanoi, Vietnam.

Dear Hiring Manager,

I'm Anamoul, a Product Designer with **9+ years of experience** working on complex, system-heavy products across logistics, travel tech, and SaaS platforms. A big part of my work has been simplifying **multi-step workflows, configuration-heavy experiences, and decision-heavy interfaces** into something more structured and usable.

This role caught my attention because it sits at that interesting intersection of **platform design, developer workflows, and AI-assisted experiences**, which is where a lot of meaningful product problems are shifting right now.

What feels relevant here:

- Designed **end-to-end flows for complex systems** (setup, configuration, dashboards, etc.)
- Strong focus on **interaction design and information architecture**.
- Experience working closely with engineers to translate **technical constraints into usable UX**.
- Contributed to **design systems and scalable patterns**.
- Recently exploring **AI-assisted flows** (guided UX, conversational interfaces, workflow acceleration).

I enjoy working on products where the challenge is not just UI, but **making complex things feel simple and predictable**, especially for users who need to get things done fast.

I'd love to learn more about OCP and how you're thinking about AI in developer workflows.

Also, I'm looking forward to connecting and exploring how I can contribute.

Best regards,

Anamoul Rouf.
